*Mountain Ice and Water* John F. Shroder,Gregory B Greenwood,2016-11-18 *Mountain Ice and Water* Investigations of the Hydrologic Cycle in Alpine Environments is a new volume of papers reviewed and edited by John Shroder Emeritus Professor of Geography and Geology at the University of Nebraska at Omaha USA and Greg Greenwood Director of the Mountain Research Initiative from Bern Switzerland Chapters in this book were derived from research papers that were delivered at the Perth III Conference on Mountains of our Future Earth in Scotland in October 2015 The conference was established to help develop the knowledge necessary to respond effectively to the risks and opportunities of global environmental change and to support transformations toward global sustainability in the coming decades To this end the conference and book have investigated the future situation in mountains from three points of view 1 Dynamic Planet Observing explaining understanding and projecting Earth environmental and societal system trends drivers and processes and their interactions to anticipate global thresholds and risks 2 Global Sustainable Development Increasing knowledge for sustainable secure and fair stewardship of biodiversity food water health energy materials and other ecosystem services and 3 Transformations towards Sustainability Understanding transformation processes and options assessing how these relate to human values emerging technologies and social and economic development pathways and evaluating strategies for governing and managing the global environment across sectors and scales Derived from research papers delivered at the Perth III Conference on Mountains of our Future Earth in Scotland in October 2015 Helps develop the knowledge necessary for responding effectively in coming decades to the risks and opportunities of global environmental change and tactics for global sustainability Provides the research community working on global change in mountains with a broader framework established by the Future Earth initiative     *Iceland - Modern Processes and Past Environments* C. Caseldine,A. Russell,J. Hardardóttir,O. Knudsen,2005-04-28 *Iceland* provides an unique stage on which to study the natural environment both past and present and it is understanding both aspects of reconstructing the past and observing and interpreting the present that

form the focus of the contributions to this volume. The papers are all written by active researchers and incorporate both reviews and new data. Although concentrating largely on the recent Quaternary timescale, a wide range of topics is explored, including subglacial volcanism onshore and offshore, evidence for the Last Glacial Maximum and subsequent deglaciation, current glacial characteristics including jökulhlaups and glacial landsystems, soil development, Holocene ecosystem change, current oceanography, impacts of volcanic sulphur loading, chemical weathering and the CO<sub>2</sub> budget, and documentary evidence for historical climate. The key element of the volume is that for the first time it provides a wide overview of a range of topics for which Iceland provides an almost unparalleled laboratory, emphasizing the importance of research on this small island for studies over a much broader global scale. These reviews point the way to future research directions and are supplemented by extensive illustrations and a comprehensive bibliography. Wide range of related topics covered both from a present-day and Quaternary perspective. Reviews from scientists active in each research area across a range of subjects, providing both overviews and new data, supplemented by an extensive bibliography. Extensive illustrations and examples from the field.
