## **Scientific Practice Theories And Stories Of Doing Physics:**

**Scientific Practice** Jed Z. Buchwald, 1995-11 Most recent work on the nature of experiment in physics has focused on big science the large scale research addressed in Andrew Pickering's *Constructing Quarks* and Peter Galison's *How Experiments End* This book examines small scale experiment in physics in particular the relation between theory and practice The contributors focus on interactions among the people materials and ideas involved in experiments factors that have been relatively neglected in science studies The first half of the book is primarily philosophical with contributions from Andrew Pickering Peter Galison Hans Radder Brian Baigrie and Yves Gingras Among the issues they address are the resources deployed by theoreticians and experimenters the boundaries that constrain theory and practice the limits of objectivity the reproducibility of results and the intentions of researchers The second half is devoted to historical case studies in the practice of physics from the early nineteenth to the early twentieth century These chapters address failed as well as successful experimental work ranging from Victorian astronomy through Hertz's investigation of cathode rays to Trouton's attempt to harness the ether Contributors to this section are Jed Z Buchwald Giora Hon Margaret Morrison Simon Schaffer and Andrew Warwick With a lucid introduction by Ian Hacking and original articles by noted scholars in the history and philosophy of science this book is poised to become a significant source on the nature of small scale experiment in physics

**Physics and Psychics** Richard Noakes, 2019-10-17 Noakes revelatory analysis of Victorian scientists' fascination with psychic phenomena connects science the occult and religion in intriguing new ways

**How Scientific Practices Matter** Joseph Rouse, 2002 How can we understand the world as a whole instead of separate natural and human realms Joseph T Rouse proposes an approach to this classic problem based on radical new conceptions of both philosophical naturalism and scientific practice Rouse begins with a detailed critique of modern thought on naturalism from Neurath and Heidegger to Charles Taylor Thomas Kuhn and W V O Quine He identifies two constraints central to a philosophically robust naturalism it must impose no arbitrarily philosophical restrictions on science and it must shun even the most subtle appeals to mysterious or supernatural forces Thus a naturalistic approach requires philosophers to show that their preferred conception of nature is what scientific inquiry discloses and that their conception of scientific understanding is itself intelligible as part of the natural world Finally Rouse draws on feminist science studies and other recent work on causality and discourse to demonstrate the crucial role that closer attention to scientific practice can play in reclaiming naturalism A bold and ambitious book *How Scientific Practices Matter* seeks to provide a viable yet nontraditional defense of a naturalistic conception of philosophy and science Its daring proposals will spark much discussion and debate among philosophers historians and sociologists of science

*Returning to Scientific Practice* Xu Zhu, Wu Tong, 2019-05-17 This book is a result from a collective study on philosophy of scientific practice PSP which began around 2002 and is still ongoing There is an apparently increasing interest in scientific practice influenced by the historicistic philosophy of science and the sociology of

scientific knowledge SSK Prof WU Tong and his research group believe that it is necessary for PSP to turn from the theory dominant position to the practice dominance PSP has also put forward the possibility of reinterpreting the epistemic status of local knowledge in Chinese tradition which provides the most significant motivation to participate this study In this book we have selected three main cases namely Chinese medicine Fengshui and Ethnobotany to examine the effect of PSP The aim of our collective study is not merely on theoretical construction of PSP but also to consider the various applications of PSP especially for re interpreting and demonstrating the variety of local knowledge from traditional China which seems to be a genuine contribution to the international enterprise of philosophy of science particularly made by Chinese scholars

**The Philosophy Of Scientific Experimentation** Hans Radder,2003-02-23 The Philosophy of Scientific Experimentation focuses on the identification and clarification of philosophical issues in experimental science Since the late 1980s the neglect of experiment by philosophers and historians of science has been replaced by a keen interest in the subject In this volume a number of prominent philosophers of experiment directly address basic theoretical questions develop existing philosophical accounts and offer novel perspectives on the subject rather than rely exclusively on historical cases of experimental practice Each essay examines one or more of six interconnected themes that run throughout the collection the philosophical implications of actively and intentionally interfering with the material world while conducting experiments issues of interpretation regarding causality the link between science and technology the role of theory in experimentation involving material and causal intervention the impact of modeling and computer simulation on experimentation and the philosophical implications of the design operation and use of scientific instruments

*Information & Experimental Knowledge* James Mattingly,2021-12-13 An ambitious new model of experimentation that will reorient our understanding of the key features of experimental practice What is experimental knowledge and how do we get it While there is general agreement that experiment is a crucial source of scientific knowledge how experiment generates that knowledge is far more contentious In this book philosopher of science James Mattingly explains how experiments function Specifically he discusses what it is about experimental practice that transforms observations of what may be very localized particular isolated systems into what may be global general integrated empirical knowledge Mattingly argues that the purpose of experimentation is the same as the purpose of any other knowledge generating enterprise to change the state of information of the knower This trivial seeming point has a non trivial consequence to understand a knowledge generating enterprise we should follow the flow of information Therefore the account of experimental knowledge Mattingly provides is based on understanding how information flows in experiments what facilitates that flow what hinders it and what characteristics allow it to flow from system to system into the heads of researchers and finally into our store of scientific knowledge

*Bourdieu's Philosophy and Sociology of Science* Kyung-Man Kim,2023-01-31 This book explores Pierre Bourdieu s philosophy and sociology of science which though central to his thought have been largely neglected in critical examinations of his work Addressing the resultant confusion

that surrounds Bourdieu's sociologized philosophy of science it expounds his epistemology and sociology of science situating it within the context of Anglo American post positivist philosophy of science and shedding light on the critique of relativist sociology of science that emerges from his field theory From a detailed critique of Bourdieu's reflexive sociology and his attempt to enhance the uneasy epistemic status of the social sciences the author draws on the thought of Jürgen Habermas to suggest critical ethnography as a way of going beyond Bourdieu's critical theory As such Bourdieu's Philosophy and Sociology of Science will appeal to sociologists philosophers and scholars across the social sciences with interests in the work of Bourdieu and the sociology and philosophy of science

**Image and Logic** Peter Galison, 1997-10 Engages with the impact of modern technology on experimental physicists This study reveals how the increasing scale and complexity of apparatus has distanced physicists from the very science which drew them into experimenting and has fragmented microphysics into different technical traditions

**Nature Exposed** Jennifer Tucker, 2013-08-15 In Nature Exposed Jennifer Tucker studies the intersecting trajectories of photography and modern science in late Victorian Britain She examines the role of photograph as witness in scientific investigation and explores the interplay between photography and scientific authority Almost immediately after the invention of photography in 1839 photographs were characterized as offering objective access to reality unmediated by human agency political ties or philosophy This mechanical objectivity supposedly eliminated judgment and interpretation in reporting and picturing scientific results But photography is a labor intensive process that allows for and sometimes requires manipulation In the late nineteenth century the nature of this new technology sparked a complex debate about scientific practices and the value of the photographic images in the production and dissemination of scientific knowledge Recovering the controversies and commentary surrounding the early creation of scientific photography and drawing on a wide range of new sources and critical theories Tucker establishes a greater understanding of the rich visual culture of Victorian science and alternative forms of knowledge including psychical research

Handbook of Epistemology I. Niiniluoto, Matti Sintonen, Jan Wolenski, 2004-03-31 The twenty eight essays in this Handbook all by leading experts in the field provide the most extensive treatment of various epistemological problems supplemented by a historical account of this field The entries are self contained and substantial contributions to topics such as the sources of knowledge and belief knowledge acquisition and truth and justification There are extensive essays on knowledge in specific fields the sciences mathematics the humanities and the social sciences religion and language Special attention is paid to current discussions on evolutionary epistemology relativism the relation between epistemology and cognitive science sociology of knowledge epistemic logic knowledge and art and feminist epistemology This collection is a must have for anybody interested in human knowledge and its fortunes and misfortunes

**Doing Mathematics: Convention, Subject, Calculation, Analogy (2nd Edition)** Martin H Krieger, 2015-01-15 Doing Mathematics discusses some ways mathematicians and mathematical physicists do their work and the subject matters they uncover and fashion The

conventions they adopt the subject areas they delimit what they can prove and calculate about the physical world and the analogies they discover and employ all depend on the mathematics what will work out and what won't. The cases studied include the central limit theorem of statistics the sound of the shape of a drum the connections between algebra and topology and the series of rigorous proofs of the stability of matter. The many and varied solutions to the two dimensional Ising model of ferromagnetism make sense as a whole when they are seen in an analogy developed by Richard Dedekind in the 1880s to algebraicize Riemann's function theory by Robert Langlands program in number theory and representation theory and by the analogy between one dimensional quantum mechanics and two dimensional classical statistical mechanics. In effect we begin to see an identity in a manifold presentation of profiles as the phenomenologists would say. This second edition deepens the particular examples it describes the practical role of mathematical rigor it suggests what might be a mathematician's philosophy of mathematics and it shows how an ugly first proof or derivation embodies essential features only to be appreciated after many subsequent proofs. Natural scientists and mathematicians trade physical models and abstract objects remaking them to suit their needs discovering new roles for them as in the recent case of the Painlevé transcendents the Tracy-Widom distribution and Toeplitz determinants. And mathematics has provided the models and analogies the ordinary language for describing the everyday world the structure of cities or God's infinitude.

Imre Lakatos and the Guises of Reason John Kadvany, 2001-04-09 An exploration of the philosophy of science and mathematics of Hungarian emigre Imre Lakatos demonstrating its contemporary relevance

**The Constitution of Social Practices** Kevin McMillan, 2017-10-02 Practices specific recurrent types of human action and activity are perhaps the most fundamental building blocks of social reality. This book argues that the detailed empirical study of practices is essential to effective social scientific inquiry. It develops a philosophical infrastructure for understanding human practices and argues that practice theory should be the analytical centrepiece of social theory and the philosophy of the social sciences. What would social scientists research look like if they took these insights seriously? To answer this question the book offers an analytical framework to guide empirical research on practices in different times and places. The author explores how practices can be identified characterised and explained how they function in concrete contexts and how they might change over time and space. The Constitution of Social Practices lies at the intersection of philosophy social theory cultural theory and the social sciences. It is essential reading for scholars in social theory and the philosophy of social science as well as the broad range of researchers and students across the social sciences and humanities whose work stands to benefit from serious consideration of practices.

**Doing psychiatry in postwar Europe** Gundula Gahlen, Volker Hess, Marianna Scarfone, Henriette Voelker, 2024-04-30 Doing psychiatry engages with the history of European psychiatry in the second half of the twentieth century through a close and fresh look at the practices that contributed to reshape the mental health field. Case studies from across Europe allow readers to appreciate how new ways of doing contributed to transform the field beyond the watchwords of deinstitutionalisation the

prescription of neuroleptics centrality of patients and overcoming of asylum era habits Through a variety of sources and often adopting a small scale perspective the chapters take a close look at the way new practices emerged and at how they installed themselves eventually facing resistance injecting new purposes and contributing to enlarging psychiatry's fields of expertise therefore blurring its once more defined boundaries

**Scientific Theology: Reality** Alister E. McGrath, 2002-11-01 The second volume of an extended and systematic exploration of the relation between Christian theology and the natural sciences focussing on the examination and defense of theological realism

**Scientific Theology: Reality** Alister E. McGrath, 2007-01-23 The second volume of an extended and systematic exploration of the relation between Christian theology and the natural sciences focussing on the examination and defense of theological realism

**Kuhn's Structure of Scientific Revolutions - 50 Years On** William J. Devlin, Alisa Bokulich, 2015-05-18 In 1962 the publication of Thomas Kuhn's Structure revolutionized the way one conducts philosophical and historical studies of science Through the introduction of both memorable and controversial notions such as paradigms scientific revolutions and incommensurability Kuhn argued against the traditionally accepted notion of scientific change as a progression towards the truth about nature and instead substituted the idea that science is a puzzle solving activity operating under paradigms which become discarded after it fails to respond accordingly to anomalous challenges and a rival paradigm Kuhn's Structure has sold over 1.4 million copies and the Times Literary Supplement named it one of the Hundred Most Influential Books since the Second World War Now fifty years after this groundbreaking work was published this volume offers a timely reappraisal of the legacy of Kuhn's book and an investigation into what Structure offers philosophical historical and sociological studies of science in the future

Geophysics, Realism, and Industry Aitor Anduaga, 2015-12-17 Did industry and commerce affect the concepts values and epistemic foundations of different sciences If so how and to what extent This book suggests that the most significant influence of industry on science in the two case studies treated here had to do with the issue of realism Using wave propagation as the common thread this is the first book to simultaneously analyse the emergence of realist attitudes towards the entities of the ionosphere and of the earth's crust However what led physicists and engineers to adopt realist attitudes This book suggests that a new kind of realism a realism of social and cultural origins is the answer a preliminary entity realism responding to specific commercial and engineering interests and a realism that was neither strictly instrumental nor exclusively operational The book has two parts while Part I focuses on the study of the ionosphere and how the British radio industry affected ionospheric physics Part II focuses on the study of the Earth's crust and how the American oil industry affected crustal seismology

**Geophysics, Realism, and Industry** Aitor Anduaga Egaña, 2016 Getting Real is the first book to simultaneously study the emergence of realist attitudes towards the entities layers of the ionosphere and the earth's crust It proposes a new kind of realism a realism of social and cultural origins an entity realism responding to specific commercial and engineering interests

*Franz Brentano and Austrian Philosophy* Denis Fisette, Guillaume

Fréchette, Friedrich Stadler, 2020-12-05 The book discusses Franz Brentano's impact on Austrian philosophy. It contains both a critical reassessment of Brentano's place in the development of Austrian philosophy at the turn of the 20th century and a reevaluation of the impact and significance of his philosophy of mind or descriptive psychology, which was Brentano's most important contribution to contemporary philosophy and to the philosophy in Vienna. In addition, the relation between Brentano's phenomenology and the Vienna Circle is investigated together with a related documentation of Brentano's disciple Alfred Kastil in German. The general part deals with the ongoing discussion of Carnap's *Aufbau*, Vienna Circle Lecture by Alan Chalmers and the philosophy of mind with a focus on physicalism as discussed by Carnap and Wittgenstein. Gergely Ambrus. As usual, two reviews of recent publications in the philosophy of mathematics (Paolo Mancosu) and research on Otto Neurath's lifework (Jordi Cat) and Adam Tübböck are included as related research contributions. This book is of interest to students, historians, and philosophers dealing with the history of Austrian and German philosophy in the 19th and 20th century.
