Scientists Of Gaia:

Scientists Debate Gaia Stephen Henry Schneider, 2004 Leading scientists bring the controversy over Gaia up to date by exploring a broad range of recent thinking on Gaia theory

Homage to Gaia James Lovelock, 2001 With over fifty patents to his name and a stream of awards including one from the Queen of England James Lovelock is a distinguished scientist who has been widely recognized by the international scientific community In this inspiring autobiography Lovelock tells the story of his life as an independent scientist from his first job as a lab assistant to his energetic crusade to save the ozone layer We see how Lovelock came to develop his inventions and theories he recounts the history behind his famous Gaia theory and talks us through his many inventions We learn about the electron capture detector which was extremely important in the development of environmental awareness revealing for the first time the ubiquitous distribution of pesticide residues in the environment and the global distribution of CFCs He talks about his work with NASA where his ideas were adopted in the program for planetary exploration And he tells about the work he has done for organizations like the Ministry of Defence The Marine Biological Association and companies such as Shell and Hewlett Packard Written in a sharp and energetic style James Lovelock's book will entertain and inspire anyone interested in science or the creative spirit

The Vanishing Face of

Gaia James Lovelock, 2009-04-14 The global temperature is rising the ice caps are melting and levels of pollution across the world have reached unprecedented heights According to eminent scientist James Lovelock in order to survive an assault from her dependents the Earth is lurching ever closer to a permanent hot state Within the next century we will almost certainly be forced to give up many of the comforts of western living as supplies are threatened Only the fittest and the smartest will survive A reluctant jeremiad from one of the environmental movement's elder statesmen The Vanishing Face of Gaia offers an essential wake up call for the human race

Gaia James Lovelock, 2016 Gaia in which James Lovelock puts forward his inspirational and controversial idea that the Earth functions as a single organism with life influencing planetary processes to form a self regulating system aiding its own survival is now a classic work that continues to provoke heated scientific debate

Scientists on Gaia Stephen Henry Schneider, Penelope J. Boston, American Geophysical Union, 1991 Scientists on Gaia is a multidisciplinary exploration of the controversial Gaia hypothesis which was first phrased by James Lovelock and Lynn Margulis in the early 1970s Forty four contributions detail the philosophical empirical and theoretical foundations of Gaia mechanisms through which planetwide homeostasis could occur applicability of the hypothesis to planets other than Earth possible destabilization by outside forces and public policy implications

Gaia James E. Lovelock, James Lovelock, 2000-09-28 This classic work is reissued with a new preface by the author Written for non scientists the idea is put forward that life on Earth functions as a single organism

The Revenge of Gaia James Lovelock, 2007-08-02 In The Revenge of Gaia bestselling author James Lovelock father of climate studies and originator of the influential Gaia theory which views the entire earth as a living meta organism provides a definitive look at our imminent global crisis In this

disturbing new book Lovelock guides us toward a hard reality soon we may not be able to alter the oncoming climate crisis Lovelock's influential Gaia theory one of the building blocks of modern climate science conceives of the Earth including the atmosphere oceans biosphere and upper layers of rock as a single living super organism regulating its internal environment much as an animal regulates its body temperature and chemical balance But now says Lovelock that organism is sick It is running a fever born of the combination of a sun whose intensity is slowly growing over millions of years and an atmosphere whose greenhouse gases have recently spiked due to human activity Earth will adjust to these stresses but on time scales measured in the hundreds of millennia It is already too late Lovelock says to prevent the global climate from flipping into an entirely new equilibrium state that will leave the tropics uninhabitable and force migration to the poles The Revenge of Gaia explains the stress the planetary system is under and how humans are contributing to it what the consequences will be and what humanity must do to rescue itself

James Lovelock John Gribbin, Mary Gribbin, 2021-07-13 In 1972 when James Lovelock first proposed the Gaia hypothesis the idea that the Earth is a living organism that maintains conditions suitable for life he was ridiculed by the scientific establishment Today Lovelock's revolutionary insight though still extremely controversial is recognized as one of the most creative provocative and captivating scientific ideas of our time James Lovelock tells for the first time the whole story of this maverick scientist's life and how it served as a unique preparation for the idea of Gaia Drawing on in depth interviews with Lovelock himself and unprecedented access to his private papers John and Mary Gribbin paint an intimate and fascinating portrait of a restless uniquely gifted freethinker In a lifetime spanning almost a century Lovelock has followed a career path that led him from chemistry to medicine to engineering to space science He worked for the British secret service and contributed to the success of the D Day landings in World War II He was a medical experimenter and an accomplished inventor And he was working with NASA on methods for finding possible life on Mars when he struck upon the idea of Gaia conceiving of the Earth as a vast living self regulating system Deftly framed within the context of today's mounting global warming crisis James Lovelock traces the intertwining trajectories of Lovelock's life and the famous idea it brought forth which continues to provoke passionate debate about the nature and future of life on our planet

The Gaia Hypothesis Michael Ruse, 2022-12-22 The book is full of empathetic insightful and often very funny portraits of Margulis Lovelock and a community of other figures associated with Gaia Carla Nappi New Books in Science Technology and Society In 1965 English scientist James Lovelock had a flash of insight the Earth is not just teeming with life the Earth in some sense is life He mulled this revolutionary idea over for several years first with his close friend the novelist William Golding and then in an extensive collaboration with the American scientist Lynn Margulis In the early 1970s he finally went public with the Gaia hypothesis the idea that everything happens for an end the good of planet Earth Lovelock and Margulis were scorned by professional scientists but the general public enthusiastically embraced Lovelock and his hypothesis In The Gaia Hypothesis philosopher Michael Ruse with his characteristic clarity and wit uses Gaia and its history

its supporters and detractors to illuminate the nature of science itself Gaia emerged in the 1960s a decade when authority was questioned and status and dignity stood for nothing but its story is much older Ruse traces Gaia's connection to Plato and a long history of goal directed and holistic or organicist thinking and explains why Lovelock and Margulis's peers rejected it as pseudoscience But Ruse also shows why the project was a success He argues that Lovelock and Margulis should be commended for giving philosophy firm scientific basis and for provoking important scientific discussion about the world as a whole its homeostasis or in this age of global environmental uncertainty its lack thereof Ruse's treatment is thought provoking and original as you would expect from this perceptive irrepressible philosopher of biology New Scientist

A Rough Ride to the Future James Lovelock, 2014-04-03 In A Rough Ride to the Future James Lovelock the great scientific visionary of our age presents a radical vision of humanity's future as the thinking brain of our Earth system James Lovelock who has been hailed as the man who conceived the first wholly new way of looking at life on earth since Charles Darwin Independent and the most profound scientific thinker of our time Literary Review continues in his 95th year to be the great scientific visionary of our age This book introduces two new Lovelockian ideas The first is that three hundred years ago when Thomas Newcomen invented the steam engine he was unknowingly beginning what Lovelock calls accelerated evolution a process which is bringing about change on our planet roughly a million times faster than Darwinian evolution The second is that as part of this process humanity has the capacity to become the intelligent part of Gaia the self regulating Earth system whose discovery Lovelock first announced nearly 50 years ago In addition Lovelock gives his reflections on how scientific advances are made and his own remarkable life as a lone scientist The contribution of human beings to our planet is Lovelock contends similar to that of the early photosynthesisers around 3.4 billion years ago which made the Earth's atmosphere what it was until very recently By our domination and our invention we are now changing the atmosphere again There is little that can be done about this but instead of feeling guilty about it we should recognise what is happening prepare for change and ensure that we survive as a species so we can contribute to perhaps even guide the next evolution of Gaia The road will be rough but if we are smart enough life will continue on Earth in some form far into the future Elected a Fellow of the Royal Society in 1974 JAMES LOVELOCK is the author of more than 200 scientific papers and the originator of the Gaia Hypothesis now Gaia Theory His many books on the subject include *Gaia: A New Look at Life on Earth* 1979 *The Revenge of Gaia* 2006 and *The Vanishing Face of Gaia* 2009 In 2003 he was made a Companion of Honour by Her Majesty the Queen in 2005 Prospect magazine named him one of the world's top 100 public intellectuals and in 2006 he received the Wollaston Medal the highest Award of the UK Geological Society **An Analysis of James E. Lovelock's Gaia** Mohammad

Shamsudduha, 2017-07-05 *Gaia: A New Look At Life on Earth* may continue to divide opinion but nobody can deny that the book offers a powerful insight into the creative thinking of its author James E Lovelock Published in 1979 *Gaia* offered a radically new hypothesis the Earth Lovelock argued is a living entity Together the planet and all its separate living organisms

form a single self regulating body sustaining life and helping it evolve through time Lovelock sees humans as no more special than other elements of the planet railing against the once widely held belief that the good of mankind is the only thing that matters Despite being seen as radical and even idiotic on its publication a version of Lovelock s viewpoint has found resonance in contemporary debates about the environment and climate and has now broadly come to be accepted by modern thinkers As man s effects on the climate become increasingly extreme more and more elements of the Earth s self regulation seem to be unveiled forcing scientists to ask how far the planet might be able to go in order self regulate effectively Indeed despite its far fetched elements Lovelock s Gaia thesis seems to ring more convincingly today than ever before that it does is largely a result of the critical thinking skills that allowed Lovelock to produce novel explanations for existing evidence and above all to connect existing fragments of evidence together in new ways

We Belong to Gaia James Lovelock,2021-08-26

In twenty short books Penguin brings you the classics of the environmental movement James Lovelock s We Belong to Gaia draws on decades of wisdom to lay out the history of our remarkable planet to show that it is not ours to be exploited and warns us that it is fighting back Over the past 75 years a new canon has emerged As life on Earth has become irrevocably altered by humans visionary thinkers around the world have raised their voices to defend the planet and affirm our place at the heart of its restoration Their words have endured through the decades becoming the classics of a movement Together these books show the richness of environmental thought and point the way to a fairer saner greener world

The Ages of Gaia James Lovelock,1995 In his first book Gaia A New Look at Life on Earth Jim Lovelock proposed a startling new theory of life the Earth its rocks oceans atmosphere and all living things are part of one great organism evolving over the vast span of geological time In this sequel he examines environmental and scientific issues in detail including the greenhouse effect acid rain the depletion of the ozone layer and the destruction of tropical forests

Gaia in Turmoil Eileen Crist,H. Bruce Rinker,2010 Essays link Gaian science to such global environmental quandaries as climate change and biodiversity destruction providing perspectives from science philosophy politics and technology

The Many Lives of James Lovelock Jonathan Watts,2024-09-12 A BBC RADIO 4 BOOK OF THE WEEK LONGLISTED FOR THE HISTORICAL WRITERS ASSOCIATION NON FICTION CROWN AWARD Splendid GUARDIAN Utterly fascinating ROBERT MACFARLANE A scientific life as dissonant as it was remarkable FINANCIAL TIMES Drawing together the many influences which shaped his life and thinking The Many Lives of James Lovelock is a unique biography of one of the most important scientists of the modern age and the father of Gaia Theory Based on over eighty hours of interviews with Lovelock and unprecedented access to his personal papers and scientific archive Jonathan Watts has written a definitive and revelatory biography of the fascinating sometimes contradictory man who changed the way we see the world

Gaia in Action Peter Bunyard,1996 James Lovelock s Gaia theory which views the earth as a living organism is widely seen as a vital change in our scientific and cultural outlook on the planet we inhabit As the developed and developing worlds grapple with problems of sustainability on a planetary scale

the implications of Gaia theory are both urgent and critically important The contributors include James Lovelock Lynn Margulis Brian Goodwin Mae Wan Ho Peter Saunders Kate Rawles and others They seek to define what is meant by Gaia and to translate the theory into practical ways of relating to the planet as a whole Gaia 2 William Irwin Thompson,1991 Based on a conference held in Perugia Italy 1988 this collection of papers and symposia confirms Heisenberg s saying that real science is made in the conversation of scientists The New Celebrity Scientists Declan Fahy,2015-03-06 A new cultural icon strode the world stage at the turn of the twenty first century the celebrity scientist as comfortable in Vanity Fair and Vogue as Smithsonian Declan Fahy profiles eight of these eloquent controversial and compelling sellers of science to investigate how they achieved celebrity in the United States and internationally and explores how their ideas influence our understanding of the world Fahy traces the career trajectories of Richard Dawkins Stephen Hawking Steven Pinker Neil deGrasse Tyson Brian Greene Stephen Jay Gould Susan Greenfield and James Lovelock He demonstrates how each scientist embraced the power of promotion and popularization to stimulate thinking impact policy influence research drive controversies and mobilize social movements He also considers critical claims that they speak beyond their expertise and for personal gain The result is a fascinating look into how celebrity scientists help determine what it means to be human the nature of reality and how to prepare for society s uncertain future *Gaia* James Lovelock,2000 Biocivilisations Predrag Slijepcevic,2023-05-18 Biocivilisations is a fascinating original and important exploration into how complex civilisations existed on Earth long before humans What is life This is arguably the most important question in all of science Many scientists believe life can be reduced to mechanistic factors such as genes and information codes Everything can be sequenced and explained But in a world as rich and complex as this one can such an assertion really be true A growing army of scientists philosophers and artists do not share this mechanistic vision for the science of life The gene metaphor is not only too simplistic but also misleading If there is a way to reduce life to a single principle how does that principle acknowledge the creativity of life that turns both genetic and information determinism on their heads Biocivilisations is a groundbreaking book exploring the mysteries of life and its deep uncertainty Dr Predrag Slijepevi turns anthropocentric scientific thinking on its head showing how the humble bacteria created the equivalent of cities and connected them with information highways bringing our planet to life three thousand million years ago He explains how bacteria amoebas plants insects birds whales elephants and countless other species not only preceded human beings but also demonstrate elements of complex civilisation communication agriculture science art medicine and more that we associate with human achievement More than 99.99 percent of life on Earth has existed without humanity and life will continue without humans long into the future Biocivilisations is an important rethinking of the current scientific paradigm It challenges us to reconsider the limited scope and time window of our current scientific revolution and to fundamentally reimagine what we call life on Earth
