Script Models Robert Lee, Robert Misirowski, 1978 *Models to Code* Leon Starr, Andrew Mangogna, Stephen Mellor, 2017-06-15 Learn how to translate an executable model of your application into running code This is not a book about theory good intentions or possible future developments You ll benefit from translation technology and solid software engineering principles that are demonstrated with concrete examples using an open source tool chain Models don t deliver enough value if they are not on a direct path to code production But to waste time building models that are merely pictures of your code doesn t add much value either In this book you ll translate detailed yet platform independent models that solve real application problems Using a pragmatic approach Models to Code quickly dives into two case studies of Executable UML models The models and code are extensively annotated and illustrate key principles that are emphasized throughout the book You ll work with code production using C as the implementation language and targeting microcomputer classprocessors This might not be your particular target language or platform but you can use you can use what you learn here to engineer or re evaluate your own code translation system to dramatically increase the value of both your modeling and code generation solution Written by three leading experts Models to Code is an exceptional resource for producing software by model translation add it to your library today What You ll Learn See how detailed models resolve ambiguity and contradiction common in requirements Examine how a model can be detailed enough to be executable and testable while remaining platform independent Produce code from a model leaving the model intact so it can be redeployed on new platforms or adapted to changing software and hardware technology Implement platform independent model execution rules in platform specific run time code Who This Book Is For Modelers and systems engineers on active MBSE projects using Executable UML or not projects using Simulink Matlab Dymola MatrixX and other math modelling tools Any developers with current or past model experience professors students systems engineers embedded systems developers or anyone interested in learning more about software modelling

Generic Model Management Sergey Melnik, 2004-04-26 Many challenging problems in information systems engineering involve the manipulation of complex metadata artifacts or models such as database schema interface specifications or object diagrams and mappings between models Applications solving metadata manipulation problems are complex and hard to build The goal of generic model management is to reduce the amount of programming needed to solve such problems by providing a database infrastructure in which a set of high level algebraic operators are applied to models and mappings as a whole rather than to their individual building blocks This book presents a systematic study of the concepts and algorithms for generic model management The first prototype of a generic model management system is described the algebraic operators are introduced and analyzed and novel algorithms for implementing them are developed Using the prototype system and the operators presented solutions are developed for several practically relevant problems such as change propagation and reintegration

Scripts and Social Cognition Gen Eickers, 2024-12-09 This

book argues that our success in navigating the social world depends heavily on scripts Scripts play a central role in our ability to understand social interactions shaped by different contextual factors In philosophy of social cognition scholars have asked what mechanisms we employ when interacting with other people or when cognizing about other people Recent approaches acknowledge that social cognition and interaction depend heavily on contextual cultural and social factors that contribute to the way individuals make sense of the social interactions they take part in This book offers the first integrative account of scripts in social cognition and interaction It argues that we need to make contextual factors and social identity central when trying to explain how social interaction works and that this is possible via scripts Additionally scripts can help us understand bias and injustice in social interaction The author s approach combines several different areas of philosophy philosophy of mind social epistemology feminist philosophy as well as sociology and psychology to show why paying attention to injustice in interaction is much needed in social cognition research and in philosophy of mind more generally Scripts and Social Cognition How We Interact with Others will appeal to scholars and graduate students working in philosophy of mind philosophy of psychology social epistemology social ontology sociology and social psychology

The Mental Models Theory of Reasoning Walter Schaeken, Andre Vandierendonck, Walter Schroyens, Gery d'Ydewalle, Karl C. Klauer, 2013-07-04 The Mental Models Theory of Reasoning presents theoretical and empirical research on an area of growing interest the status of mental models in deductive reasoning As research in the framework of the mental models theory flourishes this book answers a need to assess the contribution of the notion of training and content It covers the central issues of propositional relational causal and probabilistic reasoning and argumentation and development In addition this work presents data regarding strategies argumentation and the development of reasoning Special features of this text include sharp theoretical analyses as well as important new empirical data offered by theorists who work in the framework of the mental models theory a critical and empirically driven account of content effects in conditional and linear reasoning and an original account on the influence of pragmatics on reasoning The Mental Models Theory of Reasoning will be of interest to researchers and advanced students of cognitive psychology and will be valuable to individuals working in Artificial Intelligence as it highlights theoretical and empirical data on how humans use mental models when tackling deductive puzzles

Scriptinformatics Dr. habil. Gábor Hosszú, 2021-02-05. Scripts writing systems usually belong to specific languages and have temporal, spatial, and cultural characteristics. The evolution of scripts has been the subject of research for a long time. This is probably because the long-term development of human thinking is reflected in the surviving script relics, many of which are still undeciphered today. The book presents the study of the script evolution with the mathematical tools of systematics, phylogenetics, and bioinformatics. In the research described, the script is the evolutionary taxonomic unit, taxon, which is analogous to the concept of biological species. Among the methods of phylogenetics, phenetics classifies the investigated taxa on the basis of their morphological similarity and does not primarily examine genealogical relationships. Due to the scarcity of morphological diversity of scripts, features, random coincidences of evolution-independent features are much more common in scripts than in biological species; thus, phenetic modelling based solely on morphological features can lead to erroneous results. For this reason, phenetic modeling has been extended with evolutionary considerations, thereby allowing the modelling uncertainties observed in the script evolution to be addressed due to the large number of random coincidences, homoplasies characterizing each script. The book describes an extended phenetic method developed to investigate the script evolution. This data-driven approach helps to reduce the impact of the uncertainties inherent in the phenetic model due to the large number of homoplasies that occur during the evolution of scripts. The elaborated phenetic and evolutionary analyses were applied to the Rovash scripts used on the Eurasian Steppe Grassland, including the Turkic Rovash, Turkic Runic, runiform, and the Székely Hungarian Rovash. The evaluation of the extended phenetic model of the scripts, the various phenograms, the script spectra, and the group spectra helped to reconstruct the main ancestors and evolutionary stages of the investigated scripts.

and in mental representations. In so doing he answers in a completely new way the age old question of whether humans are basically the same psychologically independent of cultures or basically diverse because of cultural differences. The first half of the book emphasizes cultural models from Australian Aboriginal rituals and Samoan comedy skits to more familiar terrain including a study of baseball as a cultural model for Americans. Along the way the author sheds new and novel light on many familiar institutions from educational curricula and shopping malls to modular furniture and cyberpunk fiction. These observations are then linked to theoretical developments in linguistics, semiotics and neuroscience creating a bold new approach to understanding the role of culture in everyday meaning making. The author argues that culture must be considered an intrinsic component of the human mind to a degree that most psychologists and even many anthropologists have not recognized. This new position of cultural models will make absorbing reading for psychologists, anthropologists, linguists and philosophers and to anyone interested in the issues of cultural diversity, multiculturalism or cognitive science in general.

Affective Dialogue Systems Elisabeth Andre, Laila Dybkjaer, Wolfgang Minker, Paul Heisterkamp, 2004-06-08
Human conversational partners are able at least to a certain extent to detect the speaker's or listener's emotional state and may attempt to respond to it accordingly. When instead one of the interlocutors is a computer a number of questions arise such as the following: To what extent are dialogue systems able to simulate such behaviors? Can we learn the mechanisms of emotional behaviors from observing and analyzing the behavior of human speakers? How can emotions be automatically recognized from a user's mimics, gestures and speech? What possibilities does a dialogue system have to express emotions itself? And very importantly: would emotional system behavior be desirable at all? Given the state of ongoing research into incorporating emotions in dialogue systems we found it timely to organize a Tutorial and Research Workshop on Affective Dialogue Systems ADS2004 at Kloster Irsee in Germany during June 14-16 2004. After two successful ISCA Tutorial and Research Workshops on Multimodal Dialogue Systems at the same location in 1999 and 2002 we felt that a workshop focusing on the role of affect in dialogue would be a valuable continuation of the workshop series. Due to its interdisciplinary nature the workshop attracted submissions from researchers with very different backgrounds and from many different research areas working on for example dialogue processing, speech recognition, speech synthesis, embodied conversational agents, computer graphics, animation, user modelling, tutoring systems, cognitive systems and human computer interaction.

Pretend Play As Improvisation R. Keith Sawyer, 2013-01-11
Everyday conversations including gossip, boasting, flirting, teasing and informative discussions are highly creative, improvised interactions. Children's play is also an important, often improvisational activity. One of the most improvisational games among 3 to 5 year old children is social pretend play, also called fantasy play, sociodramatic play or role play. Children's imaginations have free reign during pretend play. Conversations in these play episodes are far more improvisational than the average adult conversation. Because pretend play occurs in a dramatized fantasy world it is less constrained by social and physical reality. This book adds to our understanding of

preschoolers pretend play by examining it in the context of a theory of improvisational performance genres This theory derived from in depth analyses of the implicit and explicit rules of theatrical improvisation proves to generalize to pretend play as well The two genres share several characteristics There is no script they are created in the moment There are loose outlines of structure which guide the performance They are collective no one person decides what will happen Because group improvisational genres are collective and unscripted improvisational creativity is a collective social process The pretend play literature states that this improvisational behavior is most prevalent during the same years that many other social and cognitive skills are developing Children between the ages of 3 and 5 begin to develop representations of their own and others mental states as well as learn to represent and construct narratives Freudian psychologists and other personality theorists have identified these years as critical in the development of the personality The author believes that if we can demonstrate that children s improvisational abilities develop during these years and that their fantasy improvisations become more complex and creative it might suggest that these social skills are linked to the child s developing ability to improvise with other creative performers

Person Memory (PLE: Memory) Reid Hastie, Thomas Ostrom, Ebbe Ebbesen, Robert Wyer, David Hamilton, Donal Carlston, 2014-05-09 Originally published in 1980 this title came about after many late night discussions between the authors during a 3 week workshop on Mathematical Approaches to Person Perception in 1974 In subsequent meetings a mutual interest emerged in the development of cognitive information processing metaphors for human thought and their application to problems of social perception memory and judgment Within the context of modern research on social cognition the most distinctive aspects of the authors work was its empirical focus on how people cognitively represent people in memory and its theoretical emphasis on models of cognitive organization and process They concluded that an adequate theory of social memory was the necessary foundation for solutions to many questions concerning social perception and judgment that had dominated the 1974 workshop This volume summarizes work conducted between 1974 and 1979 on social memory by these authors In addition to six chapters summarizing individual research programs the volume includes a general introduction and a concluding theoretical integration
