DAIRY AND MEAT

Dairy stores raised on grass-based organic farms produce milk with much higher levels of heart-healthy omega-3 fats and much lower levels of heart-unhealthy omega-6 fats. This is why organic whole milk and other organic dairy products offer a cost-effective way for families to consume a healthier mix of essential fatty acids.

Conventional organic farms are raised more frequently with greater access to fresh air, sunlight and organic feedstuffs. They consume organic feed without GMOs, and are raised without antibiotics and growth hormones.

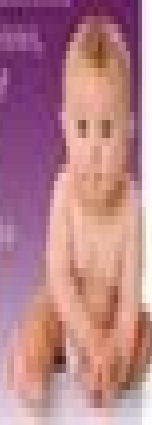

GRAINS

Methods used to protect conventional wheat from pests during storage often lead to chemical residues in flour and baked goods. Based on recent U.S. Department of Agriculture (USDA) market data, wheat, grain, cereal, flour and wheat flour 80% is particularly risk concerning.

DO YOU KNOW...

According to recent studies, consuming certain synthetic pesticides while pregnant may increase the unborn child's risk of asthma, ADHD, diabetes, obesity, autism, reproductive problems, and some forms of cancer. Exposure during childhood can further increase these risks.
