

An ancient Egyptian tomb painting depicting the god Osiris. Osiris is shown in the center, wearing a green kilt and a white shawl, with a large green headdress. He is seated on a throne, holding a crook and a flail. To his right, a woman, likely his wife Isis, is shown in profile, wearing a blue dress and a blue headscarf. The background is filled with hieroglyphs and a large, stylized lotus flower. The painting is set within a tomb, with a large, arched opening visible on the left.

Osiris Science And The City:

Osiris Sven Dierig, Jens Lachmund, Andrew Mendelsohn, 2003 Metropolitan Science Rebekah Higgitt, Jasmine Kilburn-Toppin, Noah Moxham, 2024-08-22 Exploring distinctive practices in the artisanal mercantile and governmental sites of London Metropolitan Science offers a new perspective on the development of a scientific culture between the years 1600 1800 Beginning with the demographics of London in the 17th and 18th centuries including its attraction of migrants importance as a centre of empire and the role of its institutions in government the authors analyse how and why London was a unique site of scientific activity Through the use of case studies such as the Tower of London s Royal Mint and the Livery Company Halls this book examines the city s sites of exchange for knowledge and practice and highlights the importance of both public and private spaces With exploration of London s military and colonial history the authors acknowledge how its port and maritime trade were not only central to growth and protection but also facilitated the organisation assessment valuation and pursuit of knowledge in the city Ultimately this book demonstrates that London corporations produced unique knowledge communities that drew on networks across the city and beyond and uses a variety of spatial and material approaches to reveal the use representation and exchange of practice in these collective settings *Geographies of City Science* Tanya O'Sullivan, 2019-10-22 Dublin at the turn of the twentieth century was both the second city of the British Empire and the soon to be capital of an emerging nation presenting a unique space in which to examine the past relationship between science and the city Drawing on both geography and biography *Geographies of City Science* underscores the crucial role urban spaces played in the production of scientific knowledge Each chapter explores the lives of two practitioners from one of the main religious and political traditions in Dublin either Protestant and Unionist or Catholic and Nationalist As Tanya O Sullivan argues any variation in their engagement with science had far less to do with their affiliations than with their life spaces domains where human agency and social structures collide Focusing on nineteenth century debates on the origins of the universe as well as the origins of form humans and language O Sullivan explores the numerous ways in which scientific meaning relating to origin theories was established and mobilized in the city By foregrounding Dublin her book complements more recent attempts to enrich the historiography of metropolitan science by examining its provenance in less well known urban centers , *Science in the Metropolis* Mitchell G. Ash, 2020-10-26 This book presents new research on spaces for science and processes of interurban and transnational knowledge transfer and exchange in the imperial metropolis of Vienna in the late nineteenth and early twentieth centuries Chapters discuss Habsburg science policy metropolitan natural history museums large technical projects including the Ringstrasse and water pipelines from the Alps urban geology geography public reports on polar exploration exchanges of ethnographic objects popular scientific societies and scientifically oriented adult education The infrastructures and knowledge spaces described here were preconditions for the explosion of creativity known as Vienna 1900 *Barcelona: An Urban History of Science and Modernity, 1888-1929*

Oliver Hochadel, Agustí Nieto-Galan, 2016-04-14 The four decades between the two Universal Exhibitions of 1888 and 1929 were formative in the creation of modern Barcelona Architecture and art blossomed in the work of Antoni Gaudi and many others At the same time social unrest tore the city apart Topics such as art nouveau and anarchism have attracted the attention of numerous historians Yet the crucial role of science technology and medicine in the cultural makeup of the city has been largely ignored The ten articles of this book recover the richness and complexity of the scientific culture of end of the century Barcelona The authors explore a broad range of topics zoological gardens natural history museums amusement parks new medical specialities the scientific practices of anarchists and spiritists the medical geography of the urban underworld early mass media domestic electricity and astronomical observatories They pay attention to the agenda of the bourgeois elites but also to hitherto neglected actors users of electric technologies and radio amateurs patients in clinics and dispensaries collectors and visitors of museums working class audiences of public talks and female mediums Science technology and medicine served to exert social control but also to voice social critique Barcelona An urban history of science and modernity 1888 1929 shows that the city around 1900 was both a creator and facilitator of knowledge but also a space substantially transformed by the appropriation of this knowledge by its unruly citizens Public Health and Municipal Policy Making Marjaana Niemi, 2016-04-15 Public health policies had a profound impact on urban life in the late nineteenth and early twentieth centuries yet relatively few people took an active interest in the formulation of these policies In this book Marjaana Niemi examines the impact of different political aims and pressures on scientific health policies through the analysis of public health programmes in two case studies one in Birmingham and the other in Gothenburg By examining early twentieth century campaigns concerned with infant welfare and the prevention of tuberculosis the book provides illuminating insights into the relationship between public health and the regulation of urban life Not only does the book analyse the processes whereby different political aims became embedded in these apolitical health campaigns but it also highlights the important part that the campaigns played in urban politics and governance The political aims which public health campaigns advanced are explored by comparing health policies in Britain and Sweden where officials were part of one public health community enjoying close links attending the same conferences and contributing to the same journals The problems they dealt with were often similar and in both countries health authorities claimed scientific grounds for their programmes Yet the policies they pursued were often strikingly different Through examination of two different national approaches the book does justice to the full complexity of the policy making process and illuminates the wide range of factors that affected municipal policies Envisaging Dataist Modernity Nicolas Zehner, 2025-03-27 The Edinburgh and South East Scotland City Region Deal CRD constitutes a long term infrastructure investment that is designed to transform the city region into the Data Capital of Europe Drawing on science and technology studies and urban studies Nicolas Zehner explores the question of who gets to imagine what kinds of urban regional futures by investigating the emergence and early implementation of this large multi

stakeholder urban regional development project Demonstrating the growing influence of universities in shaping desirable futures he introduces the notion of dataist modernity to characterise the contemporary relationship between science technology and urban planning Science, Technology and Medicine in the Making of Lisbon (1840-1940) ,2022-07-25 Why write a book about science technology and medicine in Lisbon No one questions the value of similar studies of European capital cities such as Paris or London but they are not reflective of the norm Alongside its unique characteristics Lisbon more closely represents the rule and deserves attention as such This book offers the first urban history of science technology and medicine in Lisbon 1840 1940 It addresses the hybrid character of a European port city scientific capital and imperial metropolis It discusses the role of science technology and medicine in the making of Lisbon framed by the analysis of invisibilities urban connections and techno scientific imaginaries The book is accompanied by a virtual interactive map

Urban Histories of Science Oliver Hochadel, Agustí Nieto-Galan, 2018-09-20 This book tells ten urban histories of science from nine cities Athens Barcelona Budapest Buenos Aires Dublin 2 articles Glasgow Helsinki Lisbon and Naples situated on the geographical margins of Europe and beyond Ranging from the mid nineteenth to the early twentieth centuries the contents of this volume debate why and how we should study the scientific culture of cities often considered peripheral in terms of their production of knowledge How were scientific practices debates and innovations intertwined with the highly dynamic urban space around 1900 The authors analyze zoological gardens research stations observatories and international exhibitions along with hospitals newspapers backstreets and private homes while also stressing the importance of concrete urban spaces for the production and appropriation of knowledge They uncover the diversity of actors and urban publics ranging from engineers scientists architects and physicians to journalists tuberculosis patients and fishermen Looking at these nine cities around 1900 is like glancing at a prism that produces different and even conflicting notions of modernity In their totality the ten case studies help to overcome an outdated centre periphery model This volume is thus able to address far more intriguing historiographical questions How do science technology and medicine shape the debates about modernity and national identity in the urban space To what degree do cities and the heterogeneous elements they contain have agency These urban histories show that science and the city are consistently and continuously co constructing each other *The Atlantis: a register of literature and science* Dublin city, univ. coll, 1858 *The Institutionalization of Science in Early Modern Europe* ,2019-11-26 This volume aims to furnish a broader framework for analyzing the scientific and institutional context that gave rise to scientific academies in Europe including the Accademia del Cimento in Florence the Royal Society in London the Acad mie Royale des Sciences in Paris and the Academia naturae curiosorum in Schweinfurt The essays detail the multiple backgrounds that prompted seventeenth century savants from Italy to England and from Poland to Portugal to establish new forms of scientific organizations in which to institutionalize collaborative research as well as modes of communication with like minded individuals and associations **Food and the City in Europe since 1800** Peter

Lummel,2016-04-15 This fascinating volume examines the impact that rapid urbanization has had upon diets and food systems throughout Western Europe over the past two centuries Bringing together studies from across the continent it stresses the fundamental links between key changes in European social history and food systems food cultures and food politics Contributors respond to a number of important questions including when and how did local food production cease to be sufficient for the city and when did improved transport conditions and liberal commercial relations replace local by supra regional food supplies How far did the food industry contribute to improved living conditions in cities What influence did urban consumers have Food and the City in Europe since 1800 also examines issues of food hygiene and health impacts in cities looks at various food innovations and how new foods often first gained acceptance in cities and explores how eating fashions have changed over the centuries

The Postwar Origins of the Global Environment Perrin Selcer,2018-09-25 In the wake of the Second World War internationalists identified science as both the cause of and the solution to world crisis Unless civilization learned to control the unprecedented powers science had unleashed global catastrophe was imminent But the internationalists found hope in the idea of world government In The Postwar Origins of the Global Environment Perrin Selcer argues that the metaphor of Spaceship Earth the idea of the planet as a single interconnected system exemplifies this moment when a mix of anxiety and hope inspired visions of world community and the proliferation of international institutions Selcer tells the story of how the United Nations built the international knowledge infrastructure that made the global scale environment visible Experts affiliated with UN agencies helped make the global as in global population global climate and global economy an object in need of governance Selcer traces how UN programs such as UNESCO s Arid Lands Project the production of a soil map of the world and plans for a global environmental monitoring system fell short of utopian ambitions to cultivate world citizens but did produce an international community of experts with influential connections to national governments He shows how events and personalities cultures and ecologies bureaucracies and ideologies decolonization and the Cold War interacted to make global knowledge A major contribution to global history environmental history and the history of development this book relocates the origins of planetary environmentalism in the postwar politics of scale

Fields of Expertise Christelle Rabier,2021-02-19 The primacy of experts and expertise in current fields of public policy governance and non governmental organizations has accompanied increasing confusion on the foundations of their practices and the adequacy of their methods Fields of Expertise clarifies the complex heritage of experts by exploring their relationship with legal political and administrative powers from a comparative historical and interdisciplinary perspective Specifically the authors offer case studies on expert procedures in the two capital cities of Paris and London since 1600 in the essential areas of risk management medical procedures economic policy and administrative reform In doing so they provide insight into the evolution of expert procedures while at the same time taking into consideration the interdisciplinary nature of scholarship on expertise drawn from Sociology Science Studies and Political Science The following articles thus

challenge traditional views on the nature of expertise and provide a synthesis of the vast and disparate literature that has been written on the subject. Fields of Expertise's international perspectives and multi-disciplinary grasp of the literature in political science, sociology, science studies, and history will be useful to scholars and students alike in addressing this highly topical issue. The essays reference mainstream sources and widely documented cases on experts and expertise, making it accessible to the general reader as well.

A Companion to Viceregal Mexico City, 1519-1821, 2021-08-16 This book presents a historical overview of colonial Mexico City and the important role it played in the creation of the early modern Hispanic world. Organized into five sections, an interdisciplinary and international team of twenty scholars scrutinize the nature and character of Mexico City through the study of its history and society, religious practices, institutions, arts, and scientific, cartographic, and environmental endeavors. The Companion ultimately shows how viceregal Mexico City had a deep sense of history, drawing from all that the ancient Americas, Europe, Asia, and Africa offered, but where history, culture, and identity twisted and turned in extraordinary fashion to forge a new society.
