The Poison Paradox John Timbrell, 2005-06-23 Using reported disasters and everyday examples this book examines both natural and man made chemicals that we are exposed to Illuminating the world of toxicology it explains how they are toxic and the different reactions that individuals have to them It also aims to debunk the popular belief that Natural is good Man made is bad

The Poison Paradox : Chemicals as Friends and Foes John Timbrell, 2005-06-23 Every day we are surrounded by chemicals that are potentially harmful Some of these we take intentionally in the form of drugs some we take unknowingly through the food we eat and the environment around us John Timbrell explores what makes particular chemicals harmful what their effects are and how we can test for them He examines drugs such as Paracetamol and what it does to the body Ricin the most toxic substance known to man Paraquat a widely available weedkiller and how the puffer fish eaten as a delicacy in Japan can kill Using case studies from all around the world such as the Spanish Oil syndrome which made over 20 000 people ill in Madrid Timbrell uncovers the facts behind chemical scares He shows how with a rational scientific and balanced approach risks can be assessed and managed safely

Poison Paradox John Timbrell, 2010-11 We are assailed with scare stories about the chemical dangers lurking in our food our homes and the environ This book explores how the chemicals that we use and that occur all around us can often be beneficial and yet under other circumstances can become poisons By examining a variety of cases from tragic disasters such as Bhopal and Minamata Bay to the puffer fish which is at once poisonous and prized as a delicacy this book explores the science of poisons the different ways in which they harm us and how they may be counteracted By understanding the science of the poisons that we might encounter by accident or design we can assess what the real risks are and learn to live with them safely

Oxidants in Biology Paul A. Davis, Giuseppe Valacchi, 2008-06-06 Oxidants like other aspects of life involves tradeoffs Oxidants whether intentionally produced or by products of normal metabolism can either mediate a variety of critical biological processes but when present inappropriately cause extensive damage to biological molecules DNA proteins and lipids These effects can lead to either damage that is a major contributor to aging and degenerative diseases or to other diseases such as cancer cardiovascular disease immune system decline brain dysfunction and cataracts or normal physiological function tissue repair defense against pathogens and cellular proliferation On the other hand the body is equipped with a complex antioxidant oxidant handling system which includes both enzymatic and nonenzymatic i e small molecules such as flavonoids ascorbate tocopherol and carotenoids produced endogenously or derived from the diet This book focuses on how the same molecules can have favorable or noxious effects depending on location level and timing Each chapter focuses on one particular molecule or oxidant antioxidant system and provides a state of the art review of the current understanding regarding both positive and negative actions of the system under review

Sustainability and Toxicity of Building Materials Emina K. Petrović, Morten Gjerde, Fabricio Chicca, Guy Marriage, 2024-02-10 Sustainability and Toxicity of Building Materials Manufacture Use and Disposal Stages provides a review of toxicity impacts from building materials including the consideration of the toxicity in the extraction and manufacture of the materials and eventual dismantling and disposal This book also offers the potential to stimulate future developments in this area both in terms of knowledge building and methods for future research With the increasing emphasis on sustainable construction it has become important to better understand the impacts of common materials Civil and structural engineers postgraduates researchers as well as architects will find this book to be useful in selecting sustainable building materials While many building and furnishing materials are safe to use in recent decades some have had to be redesigned due to recognition that they contained problem chemicals like formaldehyde Unfortunately there is still limited understanding of the toxic impacts of many synthetic chemicals which means that the risks in this area are not well recognized With increasing interest in using limited resources more sustainably definitions of what is sustainable should be expanded to move from the focus on energy and carbon impacts to also include more explicit consideration of toxicity impacts Examines toxicity in the extraction and manufacturing of materials Presents the short and long term toxicity effects of natural and manmade building materials Guides readers in selecting building materials that have a positive impact on the health of occupants and the environment
