## Poisons That Heal:

**Healing with Poisons** Yan Liu, 2021-06-27 Winner of the 2023 William H Welch Medal sponsored by the American Association for the History of Medicine A revealing study of risky cures in classical Chinese pharmacy At first glance medicine and poison might seem to be opposites But in China's formative era of pharmacy 200-800 CE poisons were strategically deployed as healing agents to cure everything from chills to pains to epidemics *Healing with Poisons* explores the ways physicians religious devotees court officials and laypeople used powerful substances to both treat intractable illnesses and enhance life It illustrates how the Chinese concept of *du* a word carrying a core meaning of potency led practitioners to devise a variety of techniques to transform dangerous poisons into efficacious medicines Recounting scandals and controversies involving poisons from the Era of Division to the early Tang period Yan Liu considers how the concept of *du* was central to the ways people of medieval China perceived both their bodies and the body politic Liu also examines a wide range of *du* possessing minerals plants and animal products in classical Chinese pharmacy including the highly poisonous herb aconite and the popular arsenic drug Five Stone Powder By recovering alternative modes of understanding wellness and the body's interaction with potent medicines this study cautions against arbitrary classifications and exemplifies the importance of paying attention to the technical political and cultural conditions in which substances become truly meaningful *Healing with Poisons* is freely available in an open access edition thanks to TOME Toward an Open Monograph Ecosystem and the generous support of the University at Buffalo Libraries DOI 10.6069/9780295749013

*Poisoning Diagnosis and Treatment* J.A. Vale, T.J. Meredith, 2012-12-06 In the last decade the incidence of acute poisoning in the developed world has risen considerably so that hospital admissions from this cause now represent a significant part of the work load of most medical units The purpose of this book is to provide an up to date account of the diagnosis and treatment of all the clinically important poisons Throughout the text the aim has been to emphasize the mechanisms of toxicity wherever they are known so that a rational approach to therapy may be devised In addition substantial chapters have been devoted to the psychiatric assessment of self-poisoned patients and to the role of the laboratory Two styles of presentation have been adopted Certain topics are discussed in depth either because of their clinical importance or because recent data have become available concerning pathophysiology or treatment In contrast when subjects have been well described previously in general medical texts for example carbon monoxide poisoning the discussion is far more brief and to the point A similar style has been adopted with recently introduced drugs where little is known about the effects in overdose The value of certain chapters especially those on poisonous plants and snake bites has been enhanced by the inclusion of a large number of colour photographs
