Moss, Lucy Riall, 2018-02-02 This handbook aims to challenge gender blindness in the historical study of high politics power authority and government by bringing together a group of scholars at the forefront of current historical research into the relationship between masculinity and political power Until very recently in historical terms formal political authority in Europe was normally and ideally held by adult males with female power being perceived as a recurrent aberration Yet paradoxically the study of the interactions between masculinity and political culture is still very much in its infancy This volume seeks to remedy this lacuna by considering the different consequences of the masculinity of power over two millennia of European history It examines how masculinity and political culture have interacted from ancient Rome and the early medieval Byzantine empire to twentieth century Germany and Italy It considers a broad variety of case studies from early medieval Iceland and late medieval France to Naples at the time of the French Revolution and Strasbourg after the Franco Prussian War with a particular focus on the development of political masculinities in Great Britain between the sixteenth century and the present day      **Man Is by Nature a Political Animal** Peter K. **From Oikonomia to Political Economy** Germano Maifreda,2016-04-22 Renaissance Europe witnessed a surge of interest in new scientific ideas and theories Whilst the study of this Scientific Revolution has dramatically shifted our appreciation of many facets of the early modern world remarkably little attention has been paid to its influence upon one key area that of economics Through an interrogation of the relationship between economic and scientific developments in early modern Western Europe this book demonstrates how a new economic epistemology appeared that was to have profound consequences both at the time and for subsequent generations Dr Maifreda argues that the new attention shown by astronomers physicians aristocrats men of letters travellers and merchants for the functioning of economic life and markets laid the ground for a radically new discourse that envisioned economics as an independent field of scientific knowledge By

researching the historical context surrounding this new field of knowledge he identifies three key factors that contributed to the cultural construction of economics Firstly Italian Humanism and Renaissance which promoted new subjects methods and quantitative analysis Secondly European overseas expansion which revealed the existence of economic cultures previously unknown to Europeans Thirdly factor identified is the fifteenth and sixteenth century crisis of traditional epistemologies which increasingly valued empirical scientific knowledge over long held beliefs Based on a wide range of published and archival sources the book illuminates new economic sensibilities within a range of established and more novel scientific disciplines including astronomy physics ethnography geology and chemistry alchemy By tracing these developments within the wider social and cultural fields of everyday commercial life the study offers a fascinating insight into the relationship between economic knowledge and science during the early modern period

Animal Rhetoric and Natural Science in Eighteenth-Century Liberal Political Writing Andrew Billing, 2023-12-07 Our tendency to read French Enlightenment political writing from a narrow disciplinary perspective has obscured the hybrid character of political philosophy rhetoric and natural science in the period As Mich le Duchet and others have shown French Enlightenment thinkers developed a philosophical anthropology to support new political norms and models This book explores how five important eighteenth century French political authors Rousseau Diderot La Mettrie Quesnay and R tif de La Bretonne also constructed a political zoology in their philosophical and literary writings informed by animal references drawn from Enlightenment natural history science and physiology Drawing on theoretical work by Derrida Latour de Fontenay and others it shows how these five authors signed on to the old rhetorical tradition of animal comparisons in political philosophy which they renewed via the findings and speculations of contemporary science Engaging with recent scholarship on Enlightenment political thought it also explores the links between their political zoologies and their family resemblance as liberal political thinkers

**A Critical History of the Economy** Ryan Walter, 2013-03-01 Drawing on recent debates in critical International Political Economy this book mobilizes the idea that the economy does not exist separately from society and politics to develop a detailed intellectual history of how the economy came to be seen as an independent domain In contrast to typical approaches to writing the history of economic thought which assume the reality of the economy the author describes the forms of intellectual argument that made it possible to conceive of the national and international economies as objects of intellectual inquiry At the centre of this process was the analytical separation of power and wealth Walter thus offers a broad historical perspective on the emergence of current IPE theory while linking the field with contextualist intellectual history This important and innovative volume will be of strong interest to students and scholars of International Political Economy International Relations Economics History and Political Theory

*William Petty* Ted McCormick, 2009-09-17 William Petty 1623 1687 was a key figure in the English colonization of Ireland the institutionalization of experimental natural philosophy and the creation of social science Examining Petty s intellectual development and his invention of political arithmetic against the backdrop of the

European scientific revolution and the political upheavals of Interregnum and Restoration England and Ireland this book provides the first comprehensive intellectual biography of Petty based on a thorough examination not only of printed sources but also of Petty's extensive archive and pattern of manuscript circulation. It is also the first fully contextualized study of what political arithmetic widely seen as an ancestor of modern social and economic analysis was originally intended to do. Ted McCormick traces Petty's education among French Jesuits and Dutch Cartesians, his early work with the Hartlib Circle of Baconian natural philosophers, inventors and reformers in England, his involvement in the Cromwellian conquest and settlement of Ireland and his engagement with both science and the politics of religion in the Restoration. He argues that Petty's crowning achievement, political arithmetic, was less a new way of analysing economy or society than a new instrument of government that applied elements of the new science: a mechanical worldview, a corpuscularian theory of matter and a Baconian stress on empirical method and the transformative purposes of natural philosophy to the creation of industrious and loyal populations. Finally, he examines the transformation of Petty's program of social engineering after his death into an apparently apolitical form of statistical reasoning.

**Monsters of the Market** David McNally, 2011-07-12 *Monsters of the Market* investigates modern capitalism through the prism of the body panics it arouses. Examining Frankenstein, Marx's Capital and zombie fables from sub-Saharan Africa, it offers a novel account of the cultural and corporeal economy of global capitalism.

**Political Animals** Jesse Donahue, Erik Trump, 2007-01-01 *Political Animals* offers a unique study and perspective on the relationship between politics and the art found in American zoos and aquariums. Jesse Donahue and Erik Trump examine the ways that zoos and aquariums have successfully served as sculptural gardens for the masses and have incorporated art and architecture that convey political messages about both the patrons and the animals. This book demonstrates how art has been used for a range of economic and political purposes, including providing jobs, a medium to reach out to minority interest groups, a fundraising tool and a surrogate for the animals themselves. Donahue and Trump skillfully analyze and compare zoos to other areas of public art to highlight the calculated strategies on the part of the zoos that have incorporated a range of artistic styles for different audiences. Incorporating photographs of zoo and aquarium art from around the country, *Political Animals* is an exciting and captivating text for the mind and eye.

The Invention of Improvement Paul Slack, 2015 The idea of improvement, gradual and cumulative betterment, was something new in 17th century England. It became commonplace to assert that improvements in agriculture, industry, commerce and social welfare would bring infinite prosperity and happiness. The word 'improvement' was itself new and, since it had no equivalent in other languages, it gave the English a distinctive culture of improvement which they took with them to Ireland, Scotland and America. Slack explains the political, intellectual and economic circumstances which allowed notions of improvement to take
