W.

Hutchison,1978-09-14 This book is about the three major turning points or revolutions in political economy and economics which are associated with the names of Adam Smith Jevons and Keynes The various components of which these major transformations consisted are examined and the different factors mainly responsible for these changes and choices are suggested Also examined are the different versions of the history of the subject including those of Marx Keynes and some of the classicals and neoclassicals in which economics have sought to set out a favourable scenario or pedigree for their systems of ideas whether traditional or revolutionary or would be revolutionary In this book the history of economics and methodological analysis are brought together and its conclusion contains an assessment of how far the ideas of Kuhn and Lakatos on the relationships between the history and methodology of science are applicable to economics and the social sciences The concept of revolutions in economics has recently been increasingly discussed in papers and articles This book offers the first attempt to deal with this subject more fully Its theme though basically historical and methodological has much relevance for the dilemmas surrounding economic policy making at the present time For increasingly severe disappointments may ensue with perhaps increasingly serious political consequences unless a wider and clearer grasp and recognition is achieved of the nature and limits of economic knowledge and of the realistic possibilities of progress therein
