Political Psychology In International Relations:

Political Psychology in International Relations Rose McDermott, 2004-04-12 A comprehensive account of the field of political psychology with a focus on its implications for international relations

Political Psychology in International Relations Rose McDermott, 2009-12-22 This outstanding book is the first to decisively define the relationship between political psychology and international relations Written in a style accessible to undergraduates as well as specialists McDermott's book makes an eloquent case for the importance of psychology to our understanding of global politics In the wake of September 11 the American public has been besieged with claims that politics is driven by personality Saddam Hussein Osama bin Laden Kim Chong Il Ayatollah Khomeini America's political rogues gallery is populated by individuals whose need for recognition supposedly drives their actions on the world stage How does personality actually drive politics And how is personality in turn formed by political environment *Political Psychology in International Relations* provides students and scholars with the analytical tools they need to answer these pressing questions and to assess their implications for policy in a real and sometimes dangerous world

Political Psychology And Foreign Policy Eric Singer, Valerie M Hudson, 2020-02-24 First published in 1992 One of the issues of particular interest to political psychologists centers around how foreign policy decisions are made The psychological phenomena that political psychologists examine have to do with how individuals perceive interpret feel about and react to their environment The political factors have to do with the activities involved in governing or the making of public policy that is with how the material and human resources of a collectivity are allocated The research presented in this volume addresses 6 key questions that link psychological and political processes and the chapters are organized around three conceptual clusters perception studies personality studies and studies of group dynamics

The Psychology of Foreign Policy Christer Pursiainen, Tuomas Forsberg, 2021-10-16 This book focuses on foreign policy decision making from the viewpoint of psychology Psychology is always present in human decision making constituted by its structural determinants but also playing its own agency level constitutive and causal roles and therefore it should be taken into account in any analysis of foreign policy decisions The book analyses a wide variety of prominent psychological approaches such as bounded rationality prospect theory belief systems cognitive biases emotions personality theories and trust to the study of foreign policy identifying their achievements and added value as well as their limitations from a comparative perspective Understanding how leaders in world politics act requires us to consider recent advances in neuroscience psychology and behavioral economics As a whole the book aims at better integrating various psychological theories into the study of international relations and foreign policy analysis as partial explanations themselves but also as facets of more comprehensive theories It also discusses practical lessons that the psychological approaches offer since ignoring psychology can be costly decision makers need to be able to reflect on their own decision making process as well as the perspectives of the others Paying attention to the psychological factors in international relations is necessary for

better understanding the microfoundations upon which such agency is based *Perception and Misperception in International Politics* Robert Jervis, 2017-05-02 Since its original publication in 1976 *Perception and Misperception in International Politics* has become a landmark book in its field hailed by the New York Times as the seminal statement of principles underlying political psychology This new edition includes an extensive preface by the author reflecting on the book's lasting impact and legacy particularly in the application of cognitive psychology to political decision making and brings that analysis up to date by discussing the relevant psychological research over the past forty years Jervis describes the process of perception for example how decision makers learn from history and then explores common forms of misperception such as overestimating one's influence He then tests his ideas through a number of important events in international relations from nineteenth and twentieth century European history *Perception and Misperception in International Politics* is essential for understanding international relations today **How Statesmen Think** Robert Jervis, 2017-02-28 Robert Jervis has been a pioneering leader in the study of the psychology of international politics for more than four decades *How Statesmen Think* presents his most important ideas on the subject from across his career This collection of revised and updated essays applies, elaborates and modifies his pathbreaking work The result is an indispensable book for students and scholars of international relations *How Statesmen Think* demonstrates that expectations and political and psychological needs are the major drivers of perceptions in international politics as well as in other arenas Drawing on the increasing attention psychology is paying to emotions the book discusses how emotional needs help structure beliefs It also shows how decision makers use multiple shortcuts to seek and process information when making foreign policy and national security judgments For example the desire to conserve cognitive resources can cause decision makers to look at misleading indicators of military strength and psychological pressures can lead them to run particularly high risks The book also looks at how deterrent threats and counterpart promises often fail because they are misperceived *How Statesmen Think* examines how these processes play out in many situations that arise in foreign and security policy including the threat of inadvertent war the development of domino beliefs the formation and role of national identities and conflicts between intelligence organizations and policymakers

Biopolitics, Political Psychology, and International Politics Gerald W. Hoppo, 1982-01-01

Who Fights for Reputation Keren Yarhi-Milo, 2018 How psychology explains why a leader is willing to use military force to protect or salvage reputation In *Who Fights for Reputation* Keren Yarhi-Milo provides an original framework based on insights from psychology to explain why some political leaders are more willing to use military force to defend their reputation than others Rather than focusing on a leader's background beliefs bargaining skills or biases Yarhi-Milo draws a systematic link between a trait called self monitoring and foreign policy behavior She examines self monitoring among national leaders and advisers and shows that while high self-monitors modify their behavior strategically to cultivate image enhancing status low self-monitors are less likely to change their behavior in response to reputation concerns Exploring self monitoring through case studies of foreign policy crises during the terms of U.S. presidents Carter Reagan and Clinton Yarhi-Milo disproves the notion that hawks are always more likely than doves to fight for reputation Instead Yarhi-Milo

demonstrates that a decision maker's propensity for impression management is directly associated with the use of force to restore a reputation for resolve on the international stage. *Who Fights for Reputation* offers a brand new understanding of the pivotal influence that psychological factors have on political leadership, military engagement, and the protection of public prestige.
