Quaternary Landscapes in Iowa Robert V. Ruhe, 1969      *European Glacial Landscapes* David Palacios, Philip D. Hughes, Jose M. Garcia-Ruiz, Nuria de Andrés, 2022-09-16

European Glacial Landscapes Last Deglaciation brings together relevant experts on the history of glaciers and their impact on the landscape of the main European regions Soon after the Last Glacial Maximum a rapid process of the glacial retreat began throughout Europe This was interrupted several times by abrupt climate cooling which caused rapid although moderate re advance of the glaciers until the beginning of the Holocene when the climate became relatively stable and warm These successive glacial advances and retreats during the Last Deglaciation have shaped much of the European landscape reflecting abrupt climatic fluctuations As our knowledge of abrupt climate changes since the Last Glacial Maximum progresses new uncertainties arise These are critical for understanding how climate changes disseminate through Europe such as the lag between climate changes and the expansion or contraction of glaciers as well as the role of the large continental ice sheets on the European climate All these contributions are included in the book which is an invaluable resource for geographers geologists environmental scientists paleoclimatologists as well as researchers in physics and earth sciences Provides a synthesis that highlights the main similarities or differences through both space and time during the Last Deglaciation of Europe Features research from experts in quaternary geomorphology palaeoclimatology palaeoceanography and palaeoglaciology on the Last Deglaciation in Europe during Termination 1 and the important Late Pleistocene Holocene transition Includes detailed colour figures and maps providing a comprehensive overview of the glacial landscapes of Europe during the last deglaciation      *Quaternary Landscapes* Linda C. **Quaternary Landscapes** Linda C. K. Shane, Edward J. Cushing, National Science Foundation (U.S.). Climate Dynamics Program, University of Minnesota, 1991      **Landscapes and Societies** I. Peter Martini, Ward Chesworth, 2010-11-09

This book contains case histories intended to show how societies and landscapes interact The range of interest stretches from the small groups of the earliest Neolithic through Bronze and Iron Age civilizations to modern nation states The coexistence is of its very nature reciprocal resulting in changes in both society and landscape In some instances the adaptations may be judged successful in terms of human needs but failure is common and even the successful cases are ephemeral when judged in the light of history Comparisons and contrasts between the various cases can be made at various scales from global through inter regional to regional and smaller scales At the global scale all societies deal with major problems of climate change sea level rise and with ubiquitous problems such as soil erosion and landscape degradation Inter regional differences bring out significant detail with one region suffering from drought when another suffers from widespread flooding For example desertification in North Africa and the Near East contrasts with the temperate countries of southern Europe where the landscape effects of deforestation are more obvious And China and Japan offer an interesting comparison from the standpoint of geological hazards to society large unpredictable and massively erosive rivers in the former case volcanoes and

accompanying earthquakes in the latter Within the North African region localized climatic changes led to abandonment of some desertified areas with successful adjustments in others with the ultimate evolution into the formative civilization of Egypt the Gift of the Nile At a smaller scale it is instructive to compare the city states of the Medieval and early Renaissance times that developed in the watershed of a single river the Arno in Tuscany and how Pisa Siena and Florence developed and reached their golden periods at different times depending on their location with regard to proximity to the sea to the main trunk of the river or in the adjacent hills Also noteworthy is the role of technology in opening up opportunities for a society Consider the Netherlands and how its history has been formed by the technical problem of a populous society dealing with too much water as an inexorably rising sea threatens their landscape or the case of communities in Colorado trying to deal with too little water for farmers and domestic users by bringing their supply over a mountain chain These and others cases included in the book provide evidence of the successes near misses and outright failures that mark our ongoing relationship with landscape throughout the history of Homo sapiens The hope is that compilations such as this will lead to a better understanding of the issue and provide us with knowledge valuable in planning a sustainable modus vivendi between humanity and landscape for as long as possible Audience The book will interest geomorphologists geologists geographers archaeologists anthropologists ecologists environmentalists historians and others in the academic world Practically planners and managers interested in landscape environmental conditions will find interest in these pages and more generally the increasingly large body of opinion in the general public with concerns about Planet Earth will find much to inform their opinions Extra material The color plate section is available at <http://extras.springer.com>

**Submerged Landscapes of the European Continental Shelf** Nicholas C. Flemming, Jan Harff, Delminda Moura, Anthony Burgess, Geoffrey N. Bailey, 2017-05-03 Quaternary Paleoenvironments examines the drowned landscapes exposed as extensive and attractive territory for prehistoric human settlement during the Ice Ages of the Pleistocene when sea levels dropped to 120m-135m below their current levels This volume provides an overview of the geological geomorphological climatic and sea level history of the European continental shelf as a whole as well as a series of detailed regional reviews for each of the major sea basins The nature and variable attractions of the landscapes and resources available for human exploitation are examined as are the conditions under which archaeological sites and landscape features are likely to have been preserved destroyed or buried by sediment during sea level rise The authors also discuss the extent to

which we can predict where to look for drowned landscapes with the greatest chance of success with frequent reference to examples of preserved prehistoric sites in different submerged environments Quaternary Paleoenvironments will be of interest to archaeologists geologists marine scientists palaeoanthropologists cultural heritage managers geographers and all those with an interest in the drowned landscapes of the continental shelf [Encyclopedia of Quaternary Science](#) Cary Mock,2013-03-25 The second revised edition of the Encyclopedia of Quaternary Science Four Volume Set provides both students and professionals with an up to date reference work on this important and highly varied area of research There are lots of new articles and many of the articles that appeared in the first edition have been updated to reflect advances in knowledge since 2006 when the original articles were written The second edition will contain about 375 articles written by leading experts around the world This major reference work is richly illustrated with more than 3 000 illustrations most of them in colour Research in the Quaternary sciences has advanced greatly in the last 10 years especially since topics like global climate change geologic hazards and soil erosion were put high on the political agenda This second edition builds upon its award winning predecessor to provide the reader assured quality along with essential updated coverage Contains 357 broad ranging articles 4310 pages written at a level that allows undergraduate students to understand the material while providing active researchers with a ready reference resource for information in the field Facilitates teaching and learning The first edition was regarded by many as the most significant single overview of Quaternary science ever yet Editor in Chief Scott Elias has managed to surpass that in this second edition by securing even more expert reviews whilst retaining his renowned editorial consistency that enables readers to navigate seamlessly from one unfamiliar topic to the next

**Landscapes and Landforms of England and Wales** Andrew Goudie,Piotr Migoń,2020-05-10 This book presents the geomorphological diversity of England and Wales These regions are characterised by an extraordinary range of landforms and landscapes reflecting both the occurrence of many different rock types and drastic climatic changes over the last few million years including ice sheet expansion and decay The book begins by providing the geological and geomorphological context needed in order to understand this diversity in a relatively small area In turn it presents nearly thirty case studies on specific landscapes and landforms all of which are landmarks in the territory discussed These include the famous coastal cliffs and landslides granite tors of Dartmoor formerly glaciated mountains of Snowdonia and the Lake District karst of Yorkshire and many others The geomorphology of London and the Thames is also included Providing a unique reference guide to the geomorphology of England and Wales the book is lavishly illustrated with diagrams colour maps and photos and written in an easy to read style The contributing authors are distinguished geomorphologists with extensive experience in research writing and communicating science to the public The book will not only be of interest to geoscientists but will also benefit specialists in landscape research geoconservation tourism and environmental protection **Geology and Landscapes of the Eastern Pyrenees** Marc Calvet,Magali Delmas,Yanni Gunnell,Bernard Laumonier,2022-06-04 This book

provides a synthesis of the physiography and geodynamics of the entire Pyrenean orogen and its foreland basins providing the big picture structure of the orogen and chronology of its formation overview of its post orogenic evolution and Quaternary and recent landscape history One part of the book proposes a 6 7 day itinerary across the eastern and east central Pyrenees two areas that currently provide the richest best documented and most carefully curated database on the post orogenic evolution of the mountain belt The book deals with three complementary topics i geodynamics i e the long term post orogenic evolution of the Pyrenees since the declining stages of tectonic collision ca 30 million years ago and within the wider reference frame of Iberia the Western Mediterranean and the Atlantic margin ii geomorphological processes and landforms that have conspired to shape the eastern part of the French and Spanish Pyrenees in response to base level and climate related changes over than same time period iii geoheritage i e educational vignettes of the flagship landscape units and typical geological sections of the study area Written as a field guide it is designed to help readers to construct discovery based itineraries through the region with options and variants depending on time and physical ability allowing them to appreciate the key landscape and geoheritage features over the course of 1 week with potential for much more This GeoGuide is primarily aimed at confirmed geoscientists from most disciplines in Earth science at postgraduate students engaged in field studies and at curiosity driven educated amateurs keen to enhance their understanding of spectacular or enigmatic features encountered on their travels

#### **Landscapes and Landforms of Western Canada**

Olav Slaymaker, 2016-12-01 This is the only book to focus on the geomorphological landscapes of Canada West It outlines the little appreciated diversity of Canada's landscapes and the nature of the geomorphological landscape which deserves wider publicity Three of the most important geomorphological facts related to Canada are that 90% of its total area emerged from ice sheet cover relatively recently from a geological perspective permafrost underlies 50% of its landmass and the country enjoys the benefits of having three oceans as its borders the Arctic Pacific and Atlantic oceans Canada West is a land of extreme contrasts from the rugged Cordillera to the wide open spaces of the Prairies from the humid west coast forests to the semi desert in the interior of British Columbia and from the vast Mackenzie river system of the to small steep cascading streams on Vancouver Island The thickest Canadian permafrost is found in the Yukon and extensive areas of the Cordillera are underlain by sporadic permafrost side by side with the never glaciated plateaus of the Yukon One of the curiosities of Canada West is the presence of volcanic landforms extruded through the ice cover of the late Pleistocene and Holocene epochs which have also left a strong imprint on the landscape The Mackenzie and Fraser deltas provide the contrast of large river deltas debouching respectively into the Arctic and Pacific oceans

#### **Landscapes and Landforms of Scotland**

**Landscape and Land Use in Postglacial Greece** Paul Halstead, Charles Frederick, 2000-12-01 Collaboration between prehistorians and palaeoecologists is radically changing our understanding of the relationship between landscape land use and human settlement in Greece The chapters in this volume include case studies and broader syntheses developments of both on site and off site field methodology explorations of palaeoecological and archaeological evidence and discussions of how the palaeoecological and archaeological records are formed Contributions range geographically over the contrasting natural and cultural landscapes of northern and southern Greece and the lowlands and highlands and chronologically over the whole postglacial period including studies of plant and animal ecology and of palaeoecological formation processes in the present The difficulty of disentangling climatic and anthropogenic causes of palaeoecological change is a recurrent theme

Geological Heritage and Biodiversity in Natural and Cultural Landscapes Antonio Miguel Martínez-Graña, José Ángel Sánchez Agudo, 2021-09-10 Geological Heritage has very diverse elements both for its intrinsic nature and for its social and scientific significance These elements have a scientific dimension stratigraphic geomorphological lithological paleontological etc and a landscape dimension both with implications for territorial management In territorial management and planning it is essential to carry out inventory and cataloging of places of natural and social interest to establish a comprehensive policy

The identification and valuation of the geological and biological heritage and their interaction in the landscape should favor the conservation and preservation of this natural and historical heritage Sustainable development implies rational use that prevents the degradation or loss of these unique environments of the natural environment as well as a dissemination and awareness of landscape resources for a better understanding and enjoyment integrating activities of both environmental education and nature tourism

**Cultural Landscapes and Environmental Change** Lesley Head, 2017-09-25 Cultural landscapes are usually understood within physical geography as those transformed by human action As human influence on the earth increases advances in palaeocological reconstruction have also allowed for new interpretations of the evidence for the earliest human impacts on the environment It is essential that such evidence is examined in the context of modern trends in social sciences and humanities This stimulating new book argues that convergence of the two approaches can provide a more holistic understanding of long term physical and human processes Split into two major sections this book attempts to bridge the gap between the sciences and humanities The first section provides an analysis of the methodological tools employed in examining processes of environmental change Empirical research in the fields of palaeocology and Quaternary studies is combined with the latest theoretical views of nature and landscape occurring in cultural geography archaeology and anthropology The author examines the way in which environmental management decisions are made The book then moves on to discuss the relevance of this perspective to contemporary issues through a wide variety of international case studies including World Heritage protection landscape preservation indigenous people and cultural tourism

**Balkan Biodiversity** Huw I. Griffiths, Boris Kryštufek, Jane M. Reed, 2013-03-19 Balkan Biodiversity is the first attempt to synthesise our current understanding of biodiversity in the great European hot spot The conservation of biodiversity is one of today's great ecological challenges but Balkan biodiversity is still poorly understood in a region with complex physical geography and a long history of political

conflict The Balkans exhibit outstanding levels of endemism particularly in caves and ancient lakes such as Ohrid lying at the crossroads of Europe and Asia they are also renowned as a focus of Pleistocene glacial refugia This volume unites a diverse group of international researchers for the first time Its interdisciplinary approach gives a broad perspective on biodiversity at the level of the gene species and ecosystem including contributions on temporal change Biological groups include plants mammals spiders and humans cave dwelling organisms fish aquatic invertebrates and algae The book should be read by zoologists botanists speleobiologists palaeoecologists palaeolimnologists and environmental scientists
