Made up of several genera of flightless birds, among them one of the very largest birds that ever lived, the dromornithids ranged from 60 kilogram beasts 1.5 meters tall to giants twice that size weighing nearly half a metric ton. They were by orders of magnitude the largest geese that ever lived. One species was comparable in size to the Elephantbird of Madagascar and the Giant Moa of New Zealand. This book is the first major study of this unique and highly diverse group. It aims to present as complete a synthesis as possible of current information about this fascinating family of birds.
