Quest Canadas Search For Arctic Oil:

Quest Tom Kennedy, 1988 History of exploration for oil and gas in the Canadian arctic islands **Breaking Ice for Arctic Oil** Ross Coen, 2012-04-15 In 1969 an icebreaking tanker the SS Manhattan was commissioned by Humble Oil to transit the Northwest Passage in order to test the logistical and economic feasibility of an all marine transportation system for Alaska North Slope crude oil Proposed as an alternative to the Trans Alaska Pipeline the Manhattan made two voyages to the North American Arctic and collected volumes of scientific data on ice conditions and the behavior of ships in ice Although the Manhattan successfully navigated the Northwest Passage closing a five hundred year chapter of Arctic exploration by becoming the first commercial vessel to do so the expedition ultimately demonstrated the impracticality of moving crude oil using icebreaking ships **Breaking Ice for Arctic Oil** details this historic voyage establishing its significant impact on the future of marine traffic and resource development in the Arctic and setting the stage for the current oil crisis **Competing Arctic Futures** Nina Wormbs, 2018-08-06 This edited collection explores how narratives about the future of the Arctic have been produced historically up until the present day The contemporary deterministic and monolithic narrative is shown to be only one of several possible ways forward This book problematizes the dominant prediction that there will be increased shipping and resource extraction as the ice melts and shows how this seemingly inevitable future has consequences for the action that can be taken in the present This collection looks to historical projections about the future of the Arctic evaluating why some voices have been heard and championed while others remain marginalised It questions how these historical perspectives have shaped resource allocation and governance structures to understand the forces behind change in the Arctic region Considering the history of individuals and institutions their political and economic networks and their perceived power the essays in this collection offer new perspectives on how the future of the Arctic has been produced and communicated

Remote Sensing of Sea Ice and Icebergs Simon Haykin, Edward O. Lewis, R. Keith Raney, James R. Rossiter, 1994-10-28 Describes the latest remote sensing technologies used to detect ice hazards in the marine environment map surface currents sea state and surface winds study ice dynamics over ice transportation oil spill countermeasures climate changes and ice reconnaissance Includes such technologies as acoustic sensing ice thickness measurement passive microwave remote sensing ground wave and surface based radars **Developing Alberta's Oil Sands** Paul Anthony Chastko, 2004 Alberta's oil sands represent a vast and untapped oil reserve that could reasonably supply all of Canada's energy needs for the next 475 years With an estimated 300 billion barrels of recoverable oil at stake the quest to develop this natural resource has been undertaken by many powerful actors both nationally and internationally Using research that integrates the economic political scientific and business factors that have been influential in discovering and developing the sands this book provides a comprehensive history of the oil sands project and a window on the nature of the complex relationships between industry government and transnational players This book is the first comprehensive volume that

examines the origins and development of the oil sands industry over the last century **China's Role in the Arctic** Nong Hong, 2020-04-13 This book explores the growing interests of China in the Arctic and examines the nature of its interests and motivations in maintaining its involvement and presence in the region The new geopolitical landscape of the Arctic today is a significant departure from the great power politics that existed in the region during the Cold War era Apart from traditional Arctic states more and more international organizations and non Arctic states are showing an increased interest in this region not least China Many have attempted to interpret China's intention in moving to the high north and this book aims to add to the existing literature from three approaches China's participation in the international institutions China's relationships with the Arctic stakeholders and China's sectoral engagement in the Arctic In taking a three dimensional approach to the analysis the author builds a comprehensive picture of China's interests and activities in the Arctic not only from the perspective of China but also from the viewpoint of other Arctic states Russia Canada the U S Norway Sweden Denmark Finland and Iceland One of the first books in English to cover the subject since the release of China's Arctic policy white paper in January 2018 this analysis will be of interest to academics students of Arctic studies maritime law and international law as well as policy makers in Arctic and non Arctic states **Canadiana** ,1989-06 **Energy Abstracts for Policy Analysis** ,1988 **Energy Capitals** Joseph A. Pratt, Martin V. Melosi, Kathleen A. Brosnan, 2015-03-23 Fossil fuels propelled industries and nations into the modern age and continue to powerfully influence economies and politics today As **Energy Capitals** demonstrates the discovery and exploitation of fossil fuels has proven to be a mixed blessing in many of the cities and regions where it has occurred With case studies from the United States Canada Mexico Norway Africa and Australia this volume views a range of older and more recent energy capitals contrasts their evolutions and explores why some capitals were able to influence global trends in energy production and distribution while others failed to control even their own destinies Chapters show how local and national politics social structures technological advantages education systems capital infrastructure labor force supply and demand and other factors have affected the ability of a region to develop and control its own fossil fuel reserves The contributors also view the environmental impact of energy industries and demonstrate how in the depletion of reserves or a shift to new energy sources regions have or have not been able to recover economically The cities of Tampico Mexico and Port Gentil Gabon have seen their oil deposits exploited by international companies with little or nothing to show in return and at a high cost environmentally At the opposite extreme Houston Texas has witnessed great economic gain from its oil natural gas and petrochemical industries Its growth however has been tempered by the immense strain on infrastructure and the human transformation of the natural environment In another scenario Perth Australia Calgary Alberta and Stavanger Norway have benefitted as the closest established cities with administrative and financial assets for energy production that was developed hundreds of miles away Whether coal oil or natural gas the essays offer important lessons learned over time and future considerations for the best ways to capture the
