Barnett, 1996      *Decision-Making Experiments under a Philosophical Analysis: Human Choice as a Challenge for Neuroscience* Gabriel José Corrêa Mograbi, Carlos Eduardo Batista de Sousa, 2015-10-15 This introduction just aims to be a fast foreword to the special topic now turned into an e book The Editorial Decision Making Experiments under a Philosophical Analysis Human Choice as a Challenge for Neuroscience alongside with my opinion article Neurophilosophical considerations on decision making Pushing up the frontiers without disregarding their foundations play the real role of considering in more details the articles and the whole purpose of this e book What I must highlight in this foreword is that our intention with such a project was to deepen into the very foundations of our current paradigms in decision neuroscience and to philosophically moot its foundations and repercussions Normal Science a term coined by Philosopher Thomas Kuhn works under a research consensus among a scientific community A shared paradigm consolidated methods widespread convictions Pragmatically winning formulas must be kept although not at any cost What differentiates a gifted and revolutionary scientist from a more bureaucratic colleague is the capacity and willingness of constantly reevaluating depurating and refining his her own paradigm That is best strategy to avoid that a paradigm itself would gradually come under challenge In my view some achievements in this sense were brought about in our project The e book will be inspiring and informative for both neuroscientists that are concerned with the very foundations of their works and for philosophers that are not blind to empirical evidence Kant once said Thoughts without content are empty intuitions without concepts are blind Paraphrasing Kant we could say Philosophy without science is empty science without philosophy is blind

**Thought Experiments** Roy A. Sorensen Associate Professor of Philosophy New York

University, 1992-08-06 Sorensen presents a general theory of thought experiments what they are how they work what are their virtues and vices On Sorensen's view philosophy differs from science in degree but not in kind For this reason he claims it is possible to understand philosophical thought experiments by concentrating on their resemblance to scientific relatives Lessons learned about scientific experimentation carry over to thought experiment and vice versa Sorensen also assesses the hazards and pseudo hazards of thought experiments Although he grants that there are interesting ways in which the method leads us astray he attacks most scepticism about thought experiments as arbitrary They should be used he says as they generally are used as part of a diversified portfolio of techniques All of these devices are individually susceptible to abuse fallacy and error Collectively however they provide a network of cross checks that make for impressive reliability

*Long History, Deep Time* Ann McGrath, Mary Anne Jebb, 2015-08-17 The vast shape shifting continent of Australia enables us to take a long view of history We consider ways to cross the great divide between the deep past and the present Australia's human past is not a short past so we need to enlarge the scale and scope of history beyond 1788 In ways not so distant these deeper times happened in the same places where we walk today Yet they were not the same places having different surfaces ecologies and peoples Contributors to this volume show how the earth and its past peoples can wake us up to a sense of place as history as a site of both change and continuity This book ignites the possibilities of what the spaces and expanses of history might be Its authors reflect upon the need for appropriate feasible timescales for history pointing out some of the

obstacles encountered in earlier efforts to slice human time into thematic categories Time and history are considered from the perspective of physics archaeology literature western and Indigenous philosophy Ultimately this collection argues for imaginative new approaches to collaborative histories of deep time that are better suited to the challenges of the Anthropocene Contributors to this volume including many leading figures in their respective disciplines consider history s temporality and ask how history might expand to accommodate a chronology of deep time Long histories that incorporate humanities science and Indigenous knowledge may produce deeper meanings of the worlds in which we live

The Crisis of Method in Contemporary Analytic Philosophy Avner Baz, 2017-12-08 Avner Baz offers a critique of leading work in mainstream analytic philosophy and in particular challenges assumptions underlying recent debates concerning philosophical method In the first part of *The Crisis of Method* Baz identifies fundamental confusions about what the widely employed philosophical method of cases is supposed to accomplish and how He then argues that the method as commonly employed by both armchair and experimental philosophers is underwritten by substantive and poorly supported representationalist assumptions about language assumptions to which virtually all of the participants in the recent debates over philosophical method have shown themselves committed In the second part of the book Baz challenges those assumptions both philosophically and empirically Drawing on Austin Wittgenstein and Merleau Ponty as well as on empirical studies of first language acquisition he presents and motivates a broadly pragmatist conception of language on which the method of cases as commonly practiced is fundamentally misguided more misguided than even its staunchest critics have hitherto recognized

**Epistemic Thought Experiments and Intuitions** Manhal Hamdo, 2023-06-28 This work investigates intuitions nature demonstrating how philosophers can best use them in epistemology First the author considers several paradigmatic thought experiments in epistemology that depict the appeal to intuition He then argues that the nature of thought experiment generated intuitions is not best explained by an a priori Platonism Second the book instead develops and argues for a thin conception of epistemic intuitions The account maintains that intuition is neither a priori nor a posteriori but multi dimensional It is an intentional but non propositional mental state that is also non conceptual and non phenomenal in nature Moreover this state is individuated by its progenitor namely the relevant thought experiment Third the author provides an

argument for the evidential status of intuitions based on the correct account of the nature of epistemic intuition The suggestion is the fitting ness approach intuition alone has no epistemic status Rather intuition has evidentiary value as long as it fits well with other pieces into a whole namely the pertinent thought experiment Finally the book addresses the key challenges raised by supporters of anti centrality according to which philosophers do not regard intuition as central evidence in philosophy To that end the author responds to them showing that they fail to affect the account of intuition developed in this book This text appeals to students and researchers working in epistemology *CUET-PG Philosophy [HUQP16]*
