Auyang,2001-03-15 Sunny Auyang tackles what she calls the large pictures of the human mind exploring the relevance of cognitive science findings to everyday mental life Auyang proposes a model of an open mind emerging from the self organization of infrastructures which she opposes to prevalent models that treat mind as a disembodied brain or computer subject to the control of external agents such as neuroscientists and programmers Although cognitive science has obtained abundant data on neural and computational processes it barely explains such ordinary experiences as recognizing faces feeling pain or remembering the past In this book Sunny Auyang tackles what she calls the large pictures of the human mind exploring the relevance of cognitive science findings to everyday mental life Auyang proposes a model of an open mind emerging from the self organization of infrastructures which she opposes to prevalent models that treat mind as a disembodied brain or computer subject to the control of external agents such as neuroscientists and programmers Her model

consists of three parts 1 the open mind of our conscious life 2 mind s infrastructure the unconscious processes studied by cognitive science and 3 emergence the relation between the open mind and its infrastructure At the heart of Auyang s model is the mind that opens to the world and makes it intelligible A person with an open mind feels thinks recognizes believes doubts anticipates fears speaks and listens and is aware of I together with it and thou Cognitive scientists refer to the binding problem the question of how myriad unconscious processes combine into the unity of consciousness Auyang approaches the problem from the other end by starting with everyday experience rather than with the mental infrastructure In so doing she shows both how analyses of experiences can help to advance cognitive science and how cognitive science can help us to understand ourselves as autonomous subjects *Quantum Mind and Social Science* Alexander Wendt,2015-04-23
