Information processing in sensor networks is a rapidly emerging area of computer science and electrical engineering research. Because of advances in micro sensors, wireless networking and embedded processing, ad hoc networks of sensors are becoming increasingly available for commercial, military and homeland security applications. Examples include monitoring e.g. traffic, habitat security, industrial sensing and diagnostics e.g. factory appliances, infrastructures i.e. power grid, water distribution, waste disposal and battle awareness e.g. multi target tracking. This book introduces practitioners to the fundamental issues and technology constraints concerning various aspects of sensor networks such as information organization, querying, routing and self organization, using concrete examples and does so by using concrete examples from current research and implementation efforts. Written for practitioners, researchers and students and relevant to all application areas including environmental monitoring, industrial sensing and diagnostics, automotive and transportation security and surveillance, military and battlefield uses and large scale infrastructural maintenance. Skillfully integrates the many disciplines at work in wireless sensor network design: signal processing and estimation, communication theory and protocols, distributed algorithms and databases, probabilistic reasoning, energy aware computing, design methodologies, evaluation metrics and more. Demonstrates how querying, data routing and network self organization can support high level information processing tasks *Network Recovery* Jean-Philippe Vasseur, Mario Pickavet, Piet Demeester, 2004-08-19

Network Recovery is the first book to provide detailed information on protecting and restoring communication networks and it sets a sky high standard for any that may follow. Inside you will learn specific techniques that work at each layer of the networking hierarchy including optical, SONET, SDH, IP and MPLS as well as multi layer escalation strategies that offer the highest level of protection. The authors begin with an incisive introduction to the issues that define the field of network protection and restoration and as the book progresses they explain everything you need to know about the relevant protocols, providing theoretical analyses wherever appropriate. If you work for a network dependent organization, large or small, you will want to keep Network Recovery within reach at all times. Shows you how to implement protection and recovery techniques that will save your organization time and money. Documents techniques for the optical, SONET, SDH, IP and MPLS layers as well as multi layer escalation strategies. Shows you how to evaluate these techniques in relation to one another so you can develop an optimal network recovery design. Provides industry examples and simulation results. Delves into the inner workings of relevant protocols and offers theoretical analyses wherever this information contributes to your practical knowledge *Managing Traffic Performance in Converged Networks* Lorne Mason, Tadeusz Drwiega, James Yan, 2007-09-04
