A Scientific Approach to Writing for Engineers and Scientists Robert E. Berger, 2014-05-23 A SCIENTIFIC APPROACH TO WRITING Technical ideas may be solid or even groundbreaking but if these ideas cannot be clearly communicated reviewers of technical documents e.g. proposals for research funding articles submitted to scientific journals and business plans to commercialize technology are likely to reject the argument for advancing these ideas The problem is that many engineers and scientists entirely comfortable with the logic and principles of mathematics and science treat writing as if it possesses none of these attributes The absence of a systematic framework for writing often results in sentences that are difficult to follow or arguments that leave reviewers scratching their heads This book fixes that problem by presenting a scientific approach to writing that mirrors the sensibilities of scientists and engineers an approach based on an easily discernable set of principles Rather than merely stating rules for English grammar and composition this book explains the reasons behind these rules and shows that good reasons can guide every writing decision This resource is also well suited for the growing number of scientists and engineers in the U S and elsewhere who speak English as a second language as well as for anyone else who just wants to be understood

Interacting With Audiences Ann M. Blakeslee, 2000-10-01 This distinctive monograph examines the dynamic rhetorical processes by which scientists shape negotiate and position their work within an interdisciplinary

community Author Ann M Blakeslee studies the everyday rhetorical practices of a group of condensed matter theoretical physicists and presents here the first substantial qualitative study of the planning and implementation of discursive practices by a group of scientists This volume also represents one of the first studies to use situated cognition and learning theory to study how knowledge of a domain s discursive practices is acquired by newcomers Unlike previous studies of scientists rhetorical practices which have focused primarily on the finished or published texts Blakeslee s involvement with the physicists as they engaged in the composing processes from jotting down planning notes through publishing a scientific paper suggests an alternative view of audience based on cooperative interaction between authors and their interlocutors From this innovative perspective functional knowledge of audiences comes only by entering into some community of practice in which readers also become self defining interlocutors and even participants in joint projects Blakeslee s research follows the physicists work into communal interactive dynamics looking at their overt attempts to get feedback from members of their audiences what that feedback was and how they responded to it This work addresses and extends a model for audience analysis that consists of two primary operations getting to know and understand one s interlocutors and determining how to reach and influence them In doing so it offers important insights into the dissemination of scientific information and thus will be of great interest to scholars and students in the areas of rhetoric of science and technology composition rhetorical theory and scientific writing
