Science Outside the Laboratory Marcel Boumans, 2015-05-01 The conduct

of most of social science occurs outside the laboratory. Such studies in field science explore phenomena that cannot for practical, technical, or ethical reasons be explored under controlled conditions. These phenomena cannot be fully isolated from their environment or investigated by manipulation or intervention. Yet measurement, including rigorous or clinical measurement, does provide analysts with a sound basis for discerning what occurs under field conditions and why. In *Science Outside the Laboratory*, Marcel Boumans explores the state of measurement theory, its reliability, and the role expert judgment plays in field investigations from the perspective of the philosophy of science. Its discussion of the problems of passive observation, the calculus of observation, the two model problem, and model-based consensus uses illustrations drawn primarily from economics. Rich in research and discussion, the volume clarifies the extent to which measurement provides valid information about objects and events in field sciences but also has implications for measurement in the laboratory. Scholars in the fields of philosophy of science, social science, and economics will find *Science Outside the Laboratory* a compelling and informative read.

IMF Staff papers International Monetary Fund, Research Dept., 1997-01-01. The Chilean pension reform of 1981, a shift from unfunded to a funded scheme, is considered to have contributed to this country's excellent economic performance. Positive growth effects allow, in principle, a Pareto-improving shift in pension financing. This paper highlights the theoretical underpinnings of the reform and presents empirical data and preliminary econometric testing of the conjectured reform effects on financial market developments as well as the impact on total factor productivity, capital formation, and private saving. The empirical evidence is consistent with most but not all claims. In particular, the direct impact of the reform on saving was low and initially even negative.

Rational Action William Thomas, 2015-04-10. The evolution of a set of fields including operations research and systems analysis, intended to improve policymaking and explore the nature of rational decision making. During World War II, the Allied military forces faced severe problems integrating equipment, tactics, and logistics into successful combat operations. To help confront these problems, scientists and engineers developed new means of studying which equipment designs would best meet the military's requirements and how the military could best use the equipment it had on hand. By 1941, they had also begun to gather and analyze data from combat operations to improve military leaders' ordinary planning activities. In *Rational Action*, William Thomas details these developments and how they gave rise, during the 1950s, to a constellation of influential new fields which he terms the sciences of policy, that included operations research, management science, systems analysis, and decision theory. Proponents of these new sciences embraced a variety of agendas. Some aimed to improve policymaking directly, while others theorized about how one decision could be considered more rational than another. Their work spanned systems engineering, applied mathematics, nuclear strategy, and the philosophy of science, and it found new niches in universities, in businesses, and at think tanks such as the RAND Corporation. The sciences of policy also took a prominent place in epic narratives told about the relationships among science, state, and society in an

intellectual culture preoccupied with how technology and reason would shape the future Thomas follows all these threads to illuminate and make new sense of the intricate relationships among scientific analysis policymaking procedure and institutional legitimacy at a crucial moment in British and American history Clusters, Digital Transformation and Regional Development in Germany Marta Götz, 2021-04-11 The information age is reshaping current socio economic structures and processes and this book touches upon the nature of clusters in the fourth industrial revolution Industry 4 0 I4 0 It focuses on the spatial perspective of digital business transformation and explores in natural context the interrelations between cluster and I4 0 It investigates the role of knowledge business relations and policy in making cluster relevant for Industry 4 0 and uses the case study method and literature review to develop a conceptual framework outlining the functioning of Industry 4 0 cluster This book argues that locally embedded knowledge accompanied by strong presence of industry and assisted by proper governance management facilitate the implementation of I4 0 The idiosyncrasies of Industry 4 0 impact also the functioning of cluster as they require more interdisciplinary integrative approach with the provision of industrial commons and development of related varieties Natural processes of stretching of the cluster cannot be prevented but should be harnessed for upgrading the core competences of cluster This book can enrich existing literature on economic geography and regional studies by discussing the spatial aspects of digital transformation It shows the cluster transformation as induced by the digital transformation and will be of interest to researchers academics policymakers and students who explore the regional and local development competitiveness or managerial aspects of fourth industrial revolution **Issues in Contemporary Economics** George R.
