**Modelling Nutrient Digestion and Utilisation in Farm Animals** D. Sauvant, J. van Milgen, P. Faverdin, N. Friggens, 2011-05-02 For more than 30 years modelling has been an important method for integrating in a flexible comprehensive and widely applicable way basic knowledge and biological concepts on digestion and metabolism in farm animals. The purpose of this book is to present the state of art in this area. The chapters are written by leading teams and researchers in this field of study mainly from Europe, North America and Australasia. Considerable progress has been made in topics dealing with modelling methods, feeding behaviour, digestion and metabolic processes in ruminants and monogastric animals. This progress is clearly illustrated by the emergence of a new paradigm in animal nutrition which has moved from the aim to cover the requirements of the animal to explaining and predicting the responses of the animals to diets e.g. productivity and efficiency, impact on quality of products, environmental aspects, health and well being. In this book several chapters illustrate that through empirical models, meta analysis is an efficient tool to synthesize information gathered over recent decades. In addition, compared with other books on modelling farm animal nutrition, two new aspects received particular attention: expanding knowledge of the individual animal to understanding the functioning and management of herds and the consideration of the environmental impact of animal production. This book is a valuable source of information for researchers, nutritionists, advisors and graduate students who want to have up to date and concise information on mathematical modelling applied to farm animals.

**Veterinary Care of Farm Rabbits** João Simões, José M. Monteiro, 2024-05-14 This holistic guide brings rabbit production science and medicine together. It considers the full spectrum of commercial rabbit husbandry including intensive, semi intensive and organic systems for meat, fur and leather. Drawn from an international authorship, the book addresses practical and fundamental topics. In comprehensive sections, readers will find easy to read chapters on rabbit breeds, anatomy, essentials and lagomorph physiology, rabbit production with details on animal facilities and farm design, international trading, rabbit meat processing and biosafety, including a vivid appendix on meat inspection, rabbit herd and health management considering latest findings in welfare and behavior, preventive medicine, antimicrobial resistance and demedication, to necropsy and specimen collection, significant rabbit diseases covering encephalitozoonosis, cuniculi, rabbit enteropathies and many more, complete veterinary treatment supplemented by reference ranges and interpretation of hematological and biochemical values. Besides an increasing keeping of pet rabbits, the animals are gaining interest for sustainable food production leading to a rise in farming in various parts of the world. In this context, the present guide provides valuable contributions for consulting veterinarians and students, industry professionals, breeders and technicians as well as for experts from the small and companion animal sector. The relevance of rabbit farming from the viewpoints of greenhouse gas reduction and sustainable use of ecological resources, use of local feed also creates useful links for readers interested in the sustainable development goals SDG 2 Zero Hunger and SDG 12.

**Rostock Feed Evaluation System** M. Beyer, 2003      [Salinity and Drainage in San Joaquin Valley, California](#) Andrew C. Chang, Deborah Brawer Silva, 2013-11-19 This book documents the history of irrigated agriculture and drainage in the San Joaquin Valley and describes the hydrology and biogeochemical processes of salts and selenium remediation technologies for salts and trace elements and policy and management options. The contents are comprised of fourteen chapter length independent treatises each depicting with fresh perspective a distinctive salinity drainage topic. The opening chapters detail the evolution of irrigated agriculture and depict the geochemical and hydrological processes that define the San Joaquin Valley including the physics chemistry and biology attributes that impact water management policies and strategies. Next the contributors address the biogeochemistry of selenium the role of plants in absorbing it from soils and the processes involved in retaining and concentrating dissolved salts in drainage water. Further chapters describe on farm and plot level irrigation provisions to reduce agricultural drainage outputs and examine their effects on plant performance. This volume offers realistic policy analysis of water management options for irrigated agriculture in the Valley and assesses their respective outcomes if implemented. Also included is an international perspective on the sustainability of irrigated agriculture there.

Production Animals Christina L. Swaggerty, Kenneth J. Genovese, Haiqi He, James Allen Byrd Jr, Michael H. Kogut, 2018-08-31 Foodborne illness resulting from food production animals is a global health concern and the Centers for Disease Control estimate that one in six Americans will become sick with a foodborne illness each year Of course there are numerous causes for these outbreaks but contamination from a food production animal is certainly one source Understanding the host pathogen interaction and how foodborne bacterial pathogens establish a persistent infection and evade host immune responses will be pivotal in reducing the instance of foodborne illness traced back to a food production animal source In this volume we bring together original research and review articles covering some of the key issues surrounding the mechanisms of persistence survival and transmission of bacterial foodborne pathogens in production animals The research focused on poultry and specifically addressed antibiotic resistance Salmonella colonization pathogen reduction strategies using pre or probiotics pathogen evasion and post harvest intervention and pathogen testing The following 11 articles are fine examples of the multidisciplinary approaches that will be required to address and understand the complex interplay between food safety and animal production *Index Medicus* ,2001 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings
