**The Science and Archaeology of Materials** Julian Henderson, 2013-04-15 The Science and Archaeology of Materials is set to become the definitive work in the archaeology of materials Henderson's highly illustrated work is an accessible and fascinating textbook which will be essential reading for all practical archaeologists With clear sections on a wide range of materials including ceramics glass metals and stone this work examines the very foundations of archaeological study Anyone interested in ancient technologies especially those involving high temperatures kilns and furnaces will be able to follow in each chapter how raw materials are refined transformed and shaped into objects This description is then followed by appropriate case studies which provide a new chronological and geographical example of how scientific and archaeological aspects can and do interact They include Roman pale green and highly decorated glass 17th Century glass in Britain and Europe the effect of the introduction of the wheel on pottery technology the technology of Celadon ceramics early copper metallurgy in the Middle East chemical analysis and lead isotope analysis of British Bronzes early copper alloy metallurgy in Thailand the chemical analysis of obsidian and its distribution the origins of the Stonehenge bluestones This book shows how archaeology and science intersect and feed off each other Modern scientific techniques have provided data which when set within a fully integrated archaeological context have the potential of contributing to mainstream archaeology This holistic approach generates a range of connections which benefits both areas and will enrich archaeological study in the future

**Citizen Science in Southern European Archaeology** Jesús Bermejo Tirado, Mattia Sanna Montanelli, Antonio Giorri, 2025-06-30 This book presents a valuable exploration of the potential for citizen science in archaeology within southern Europe The examination of citizen science in archaeology has been heavily influenced by case studies and theories from Anglophone countries where a distinctive policy and social framework exists However there is currently a notable absence of consideration on the subject in the Mediterranean context This book through an examination of the strengths and limitations of citizen science in southern Europe provides fresh insights and perspectives that inform the development of more effective citizen science projects in southern Europe and beyond It seeks not only to explore the region in question but also to facilitate cross cultural and international collaboration and promote a greater understanding of the role of citizen science in diverse contexts The chapters feature different study approaches legal conceptions case studies from Spain Italy and Greece methodological technical and critical approaches and updates of the citizen science literature providing readers with diverse perspectives As the first volume about citizen science in archaeological research and practice in Southern Europe this book is for researchers in and practitioners of citizen science archaeology and Mediterranean Studies

Archaeological Theory and Scientific Practice Andrew Jones, 2001-12-06 Is archaeology an art or a science This question has been hotly debated over the last few decades with the rise of

archaeological science At the same time archaeologists have seen a change in the intellectual character of their discipline as many writers have adopted approaches influenced by social theory The discipline now encompasses both archaeological scientists and archaeological theorists and discussion regarding the status of archaeology remains polarised In this 2001 book Andrew Jones argues that we need to analyse the practice of archaeology Through an analysis of archaeological practice influenced by recent developments in the field of science studies and with the aid of extensive case studies he develops a new framework which allows the interpretative and methodological components of the discipline to work in tandem His reassessment of the status and character of archaeology will be of interest to students scholars and professionals

Archaeological Science Under a Microscope Michael Haslam, Gail Robertson, Alison Crowther, Sue Nugent, Luke Kirkwood, 2009-07-01 These highly varied studies spanning the world demonstrate how much modern analyses of microscopic traces on artifacts are altering our perceptions of the past Ranging from early humans to modern kings from ancient Australian spears or Mayan pots to recent Maori cloaks the contributions demonstrate how starches raphides hair blood feathers resin and DNA have become essential elements in archaeology's modern arsenal for reconstructing the daily spiritual and challenging aspects of ancient lives and for understanding human evolution The book is a fitting tribute to Tom Loy the pioneer of residue studies and gifted teacher who inspired and mentored these exciting projects **Posing**

**Questions for a Scientific Archaeology** Terry L. Hunt, Carl P. Lipo, Sarah L. Sterling, 2001-06-30 Although many believe that archaeological knowledge consists simply of empirical findings this notion is false data are generated with the guidance of theory or some sense making system acting in its place whether researchers recognize this or not Failure to understand the relationship between theory and the empirical world has led to the many debates and frustrations of contemporary archaeology Despite years of trying the atheoretical empiricist foundations of archaeology have left us little but a history of storytelling and unsatisfying generalizations about historical change and human diversity The present work offers promising directions for building theoretically defensible results by providing well designed case studies that can be used as guides or exemplars Evolutionary theory in at least some form is the foundation for a scientific archaeology that will yield scientific explanations for historical change *A Consumer's Guide to Archaeological Science* Mary E. Malainey, 2010-09-28 Many

archaeologists as primarily social scientists do not have a background in the natural sciences This can pose a problem because they need to obtain chemical and physical analyses on samples to perform their research This manual is an essential source of information for those students without a background in science but also a comprehensive overview that those with some understanding of archaeological science will find useful The manual provides readers with the knowledge to use archaeological science methods to the best advantage It describes and explains the analytical techniques in a manner that the average archaeologist can understand and outlines clearly the requirements benefits and limitations of each possible method of analysis so that the researcher can make informed choices The work includes specific information about a variety

of dating techniques provenance studies isotope analysis as well as the analysis of organic lipid and protein residues and ancient DNA Case studies illustrating applications of these approaches to most types of archaeological materials are presented and the instruments used to perform the analyses are described Available destructive and non destructive approaches are presented to help archaeologists select the most effective technique for gaining the target information from the sample Readers will reach for this manual whenever they need to decide how to best analyze a sample and how the analysis is performed

**Transactions of the Department of Archaeology, Free Museum of Science and Art**  
University of Pennsylvania. University Museum, 1905 *Archaeology, History and Science* Marcos Martinon-Torres, Thilo Rehren, 2016-09-16 Using a combination of historical archaeological and scientific data is not an uncommon research practice Rarely found however is a more overt critical consideration of how these sources of information relate to each other or explicit attempts at developing successful strategies for interdisciplinary work The authors in this volume provide such critical perspectives examining materials from a wide range of cultures and time periods to demonstrate the added value of combining in their research seemingly incompatible or even contradictory sources Case studies include explorations of the symbolism of flint knives in ancient Egypt the meaning of cuneiform glass texts medieval metallurgical traditions and urban archaeology at industrial sites This volume is noteworthy as it offers novel contributions to specific topics as well as fundamental reflections on the problems and potentials of the interdisciplinary study of the human past Metaarchaeology Lester Embree, 2012-12-06 An idea of the philosophy of archaeology can best be gained by showing what it is what the issues are who is working in the field and how they proceed Reading Lester Embree's *Metaarchaeology* provides the best possible introduction to the field since in it several leading archaeologists show how accessible and interesting the current archaeological literature is and currently active philosophers of archaeology reveal something of the current state of discussion on the subject Bibliographies have also been developed of the philosophy of archaeology as well as of selected parts of the component that can be called metaarchaeology Finally an historical introduction has been included to show the variety of metascientific as well as orientational standpoints that philosophers of archaeology have had recourse to for over two decades followed by speculation about the future of the discipline within the philosophy of science *New Directions in Archaeological Science* Andrew S. Fairbairn, Sue O'Connor, Benjamin Marwick, 2009-02-01 Archaeological Science meetings will have a personality of their own depending on the focus of the host archaeological fraternity itself The 8th Australasian Archaeometry meeting follows this pattern but underlying the regional emphasis is the continuing concern for the processes of change in the landscape that simultaneously effect and illuminate the archaeological record These are universal themes for any archaeological research with the increasing employment of science based studies proving to be a key to understanding the place of humans as subjects and agents of change over time This collection of refereed papers covers the thematic fields of geoarchaeology archaeobotany materials analysis and chronometry with particular emphasis on the first

two The editors Andrew Fairbairn Sue O Connor and Ben Marwick outline the special value of these contributions in the introduction The international nature of archaeological science will mean that the advances set out in these papers will find a receptive audience among many archaeologists elsewhere There is no doubt that the story that Australasian archaeology has to tell has been copiously enriched by incorporating a widening net of advanced science based studies This has brought attention to the nature of the environment as a human artefact a fact now more widely appreciated and archaeology deals with these artefacts among others in this way in this publication

Forensic Science in Contemporary American Popular Culture Lindsay Steenberg,2013-01-04 This book identifies traces and interrogates contemporary American culture s fascination with forensic science It looks to the many different sites genres and media where the forensic has become a cultural commonplace It turns firstly to the most visible spaces where forensic science has captured the collective imagination crime films and television programs In contemporary screen culture crime is increasingly framed as an area of scientific inquiry and even more frequently as an area of concern for female experts One of the central concerns of this book is the gendered nature of expert scientific knowledge as embodied by the ubiquitous character of the female investigator Steenberg argues that our fascination with the forensic depends on our equal fascination with and suspicion of women s bodies with the bodies of the women investigating and with the bodies of the mostly female victims under investigation
