Scifi 93 - Proceedings Of The Scintillating Fiber Detectors Alan D Bross, Mitchell R Wayne, Randal C Ruchti, 1995-03-07
These proceedings contain over 80 contributions from an international group of scientists and engineers actively working on applications of fiber technology in high energy physics and related fields Sessions included reviews of past current and possible future detectors incorporating fiber technology for tracking and calorimetry Special sessions covered photodetection techniques including VLPCs APDs and hybrid phototubes recent advances in fiber structure optical interconnection and mechanical support and scintillation materials including new developments in scintillation dyes and studies of radiation and environmental effects Technical advances have been rapid in this promising area of detector development and the SciFi93 proceedings serve as a useful reference on the state of the art *Scintillating Fiber Detectors*, 1994 **SCIFI 93, Workshop on Scintillating Fiber Detectors, October 24-28, 1993, Notre Dame, Indiana, U.S.A.** Alan D. erent from those of photons if the structure of the light emitting device is properly designed to provide interaction between these particles. There has been a discrepancy between the theoretical understanding and experimental observation of noise in a macroscopic resistor until very recently. The dissipation that electrons experience in a resistor is expected to accompany the fluctuation due to partition noise leading to shot noise in the large dissipation limit as is the case with photons. Experimental observation shows that thermal noise expected only in a thermal equilibrium situation at zero bias condition is the only source of noise featured by a resistor dependent of the current.

Instrumentation in High Energy Physics Fabio Sauli, 1992
This volume contains topical papers covering the various aspects of instrumentation in high energy physics. The subjects of the contributions all previously unpublished have been chosen to provide an overview of the fundamental processes and of the technological problems encountered in detecting tracking and identifying charged and neutral particles in modern particle physics experiments. Each contribution offers a concise but complete description of the state of the art regarding the subject and is addressed to post doctoral and research staff readers; it will also be found useful as a teaching aid for students and participants in specialized schools and workshops on intermediate and high energy experimental physics.
