Dental Anthropology is a collection of papers that covers the application of dental pathology in the context of anthropology. The book presents 15 studies that cover various human dental variables and relates to different anthropological factors. The dental variables considered in the articles include tooth morphology, occlusion and malocclusion of primate teeth, morphogenesis of deciduous molar pattern in man and double rooted human lower canine teeth. The text also covers topics about race specific dental traits such as radiographic study of the Neanderthal teeth from Krapina, crown characters of the deciduous dentition of the Japanese American hybrids and analysis of the American Indian dentition. The selection will be of great interest to evolutionary scientists such as anthropologists and paleontologists. *Dental Anthropology* Kurt W.

Alt, Friedrich W. Rösing, Maria Teschler-Nicola, 2012-12-06 Shelley Saunders. This book offers a welcome diversity of topics covering the broader subjects of teeth and the study of teeth by anthropologists. There is an impressive array of coverage here including the history of anthropological study of the teeth, morphology and structure, pathology and epidemiology, the relationship between nutrition, human behavior and the dentition, age and sex estimation from teeth and geographic and genetic variation. Most chapter authors have provided thorough reviews of their subjects along with examples of recent analytical work and recommendations for future research. North American researchers should particularly appreciate the access to an extensive European literature cited in the individual chapter bibliographies. Physical anthropologists with even a passing interest in dental research should greet the publication of this book with pleasure since it adds to a growing list of books on how the study of teeth can tell us so much about past human populations. In addition to the archaeological applications, there is the forensic objective of dental anthropology which the editors refer to in their introduction which is dealt with in this volume. The chapters dealing with methods of sex determination, age estimation of juveniles and age estimation of adults using the teeth are exhaustive and exacting and of critical importance to both osteoarchaeologists and forensic anthropologists. Authors Liversidge, Herdeg and Rösing provide very clear guidelines for the use of dental formation standards in juvenile age estimation, recommendations that are so obviously necessary at this time. *The Scope of Physical Anthropology and Its Place in Academic Studies.
