capitalize on what students have already learned the new concepts and processes that they can learn will be richer more complex and at a higher level Designing Mathematics or Science Curriculum Programs outlines Components of effective mathematics and science programs Criteria by which these components can be judged A process for developing curriculum that is structured focused and coherent Perhaps most important this book emphasizes the need for designing curricula across the entire 13 year span that our children spend in elementary and secondary school as a way to improve the quality of education Ultimately it will help state and district educators use national and state standards to design or re build mathematics and science curriculum programs that develop new ideas and skills based on earlier ones from lesson to lesson unit to unit year to year Anyone responsible for designing or influencing mathematics or science curriculum programs will find this guide valuable      *Some Common Insects of Louisiana* Alvan L.
