Screens Kate Mondloch, 2010 Media screens film video and computer screens have increasingly pervaded both artistic production and everyday life since the 1960s Yet the nature of viewing artworks made from these media along with their subjective effects remains largely unexplored Screens addresses this gap offering a historical and theoretical framework for understanding screen reliant installation art and the spectatorship it evokes Examining a range of installations created over the past fifty years that investigate the rich terrain between the sculptural and the cinematic including works by artists such as Eija Liisa Ahtila Doug Aitken Peter Campus Dan Graham VALIE EXPORT Bruce Nauman and Michael Snow Kate Mondloch traces the construction of screen spectatorship in art from the seminal film and video installations of the 1960s and 1970s to the new media artworks of today s digital culture Mondloch identifies a momentous shift in contemporary art that challenges key premises of spectatorship brought about by technological objects that literally and metaphorically filter the subject s field of vision As a result she proposes that contemporary viewers are quite literally screen subjects and offers the unique critical leverage of art as an alternative way to understand media culture and contemporary visuality

Spaces Mapped and Monstrous Nick Jones, 2020-04-21 Digital 3D has become a core feature of the twenty first century visual landscape Yet 3D cinema is a contradictory media form producing spaces that are highly regimented and exhaustively detailed it simultaneously relies upon distortions of vision and space that are inherently strange Spaces Mapped and Monstrous explores the paradoxical nature of 3D cinema to offer a critical analysis of an inescapable part of contemporary culture Considering 3D s distinctive visual qualities and its connections to wider digital systems Nick Jones situates the production and exhibition of 3D cinema within a web of aesthetic technological and historical contexts He examines 3D s relationship with computer interfaces virtual reality and digital networks as well as tracing its lineage to predigital models of visual organization Jones emphasizes that 3D is not only a technology used in films but also a tool for producing controlling and distorting space within systems of surveillance corporatization and militarization The book features detailed analysis of a wide range of films including Avatar 2009 Goodbye to Language 2014 Love 2015 and Clash of the Titans 2010 demonstrating that 3D is not merely an augmentation of 2D cinema but that it has its own unique properties Spaces Mapped and Monstrous brings together media archaeology digital theory and textual analysis to provide a new account of the importance of 3D to visual culture today

Daniel Blum's Screen World 1969 (Screen World) (Hardcover) John Willis, The Secret Connexion Galen Strawson,2014-03-27 In this revised and updated edition of The Secret Connexion Galen Strawson explores one of the most discussed subjects in all philosophy David Hume's work on causation Strawson challenges the standard view of Hume

according to which he thinks that there is no such thing as causal influence and that there is nothing more to causation than things of one kind regularly following things of another kind. He argues that Hume does believe in causal influence but insists that we cannot know its nature. The regularity theory of causation is indefensible and Hume never adopted it in any case.

Electronic Hearth Cecelia Tichi, 1992-10-29 We all talk about the tube or box as if television were simply another appliance like the refrigerator or toaster oven. But Cecilia Tichi argues that TV is actually an environment, a pervasive screen world that saturates almost every aspect of modern life. In *Electronic Hearth* she looks at how that environment evolved and how it in turn has shaped the American experience. Tichi explores almost fifty years of writing about television in novels, cartoons, journalism, advertising, and critical books and articles to define the role of television in the American consciousness. She examines early TV advertising to show how the industry tried to position the new device as not just a gadget but a prestigious new piece of furniture, a highly prized addition to the home. The television set she writes has emerged as a new electronic hearth, the center of family activity. John Updike described this primitive appeal of the hearth in Roger's Version: Television is its irresistible charm, a fire. Entering an empty room, we turn it on, and a talking face flares into being. Sitting in front of the TV, Americans exist in a safety zone, free from the hostility and violence of the outside world. She also discusses long-standing suspicions of TV viewing, its often solitary, almost autoerotic character, its supposed numbing of the minds and imagination of children, and assertions that watching television drugs the minds of Americans. Television has been seen as treacherous territory for public figures, from generals to presidents, where satire and broadcast journalism often deflate their authority. And the print culture of journalism and book publishing has waged a decades-long war of survival against it, only to see new TV generations embrace both the box and the book as a part of their cultural world. In today's culture, she writes, we have become teleconscious, seeing for example real life being certified through television as seen on TV, and television constantly ratified through its universal presence in art, movies, music, comic strips, fabric prints, and even references to TV on TV. Ranging far beyond the bounds of the broadcast industry, Tichi provides a history of contemporary American culture, a culture defined by the television environment. Intensively researched and insightfully written, *The Electronic Hearth* offers a new understanding of a critical but much maligned aspect of modern life.
