Rainfallrunoff Modelling In Gauged And Ungauged Catchments:

Rainfall-runoff Modelling in Gauged and Ungauged Catchments Thorsten Wagener,Howard Wheeler,Hoshin Vijai Gupta,2004 This important monograph is based on the results of a study on the identification of conceptual lumped rainfall runoff models for gauged and ungauged catchments The task of model identification remains difficult despite decades of research A detailed problem analysis and an extensive review form the basis for the development of a Matlab modelling toolkit consisting of two components a Rainfall Runoff Modelling Toolbox RRMT and a Monte Carlo Analysis Toolbox MCAT These are subsequently applied to study the tasks of model identification and evaluation A novel dynamic identifiability approach has been developed for the gauged catchment case The theory underlying the application of rainfall runoff models for predictions in ungauged catchments is studied problems are highlighted and promising ways to move forward are investigated Modelling frameworks for both gauged and ungauged cases are developed This book presents the first extensive treatment of rainfall runoff model identification in gauged and ungauged catchments **Rainfall-runoff Modelling in Gauged and Ungauged Catchments** Thorsten Wagener,Howard S. Understanding Hydrological Variability for Improved Water Management in the Semi-Arid Karkheh Basin, Iran Ilyas Masih,2011-09-28 This study provides a hydrology based assessment of surface water resources and its continuum of variability and change at different spatio temporal scales in the semi arid Karkheh Basin Iran where water is scarce competition among users is high and massive water resources development is under way The study reveals that the ongoing allocation planning is not sustainable and essentially requires reformulation with consideration of spatio temporal variability and observed trends in the streamflows regarding flood intensification and decline in low flows The development of

innovative methods for quantification of the hydrological fluxes i.e regionalization of model parameters based on similarity of the flow duration curve and the use of areal precipitation input in the hydrological modeling helped better understanding and modeling the basin hydrology The investigation of scenarios for upgrading rain fed areas to irrigated agriculture using SWAT recommends the promotion of in situ soil and water conservation techniques Conversion of rain fed areas to irrigation causes significant reduction in the downstream flows and requires additional considerations such as less development in the upper catchments practicing supplementary irrigation and developing water storage The knowledge generated is instructive for hydrological assessment and its use in water resources planning and management in the river basin context

Hydrological Modelling in Arid and Semi-Arid Areas Howard Wheeler, Soroosh Sorooshian, K. D. Sharma, 2007-11-22 Arid and semi arid regions are defined as areas where water is at its most scarce The hydrological regime in these areas is extreme and highly variable and they face great pressures to deliver and manage freshwater resources However there is no guidance on the decision support tools that are needed to underpin flood and water resource management in arid areas UNESCO initiated the Global network for Water and Development Information for arid lands GWADI and arranged a workshop of the world's leading experts to discuss these issues This book presents chapters from contributors to the workshop and includes case studies from the world's major arid regions to demonstrate model applications and web links to tutorials and state of the art modelling software This volume is a valuable reference for researchers and engineers working on the water resources of arid and semi arid regions

Hydrology and Water Resource Systems Analysis Maria A. Mimikou, Evangelos A. Baltas, Vassilios A. Tsihrintzis, 2016-12-01 Hydrology and water resources analysis can be looked at together but this is the only book which presents the relevant material and which bridges the gap between scientific processes and applications in one text New methods and programs for solving hydrological problems are outlined in a concise and readily accessible form Hydrology and Water Resource Systems Analysis includes a number of illustrations and tables with fully solved example problems integrated within the text It describes a systematic treatment of various surface water estimation techniques and provides detailed treatment of theory and applications of groundwater flow for both steady state and unsteady state conditions time series analysis and hydrological simulation floodplain management reservoir and stream flow routing sedimentation and erosion hydraulics urban hydrology the hydrological design of basic hydraulic structures storage spillways and energy dissipation for flood control optimization techniques for water management projects and methods for uncertainty analysis It is written for advanced undergraduate and graduate students and for practitioners Hydrologists and water related professionals will be helped with an unfamiliar term or a new subject area or be given a formula the procedure for solving a problem or guidance on the computer packages which are available or shown how to obtain values from a table of data For them it is a compendium of hydrological practice rather than science but sufficient scientific background is provided to enable them to understand the hydrological processes in a given problem and to appreciate the limitations of the methods

Hromadka II,Robert J. Whitley,2012-12-06 The subject of rainfall runoff modeling involves a wide spectrum of topics Fundamental to each topic is the problem of accurately computing runoff at a point given rainfall data at another point The fact that there is currently no one universally accepted approach to computing runoff given rainfall data indicates that a purely deterministic solution to the problem has not yet been found The technology employed in the modern rainfall runoff models has evolved substantially over the last two decades with computer models becoming increasingly more complex in their detail of describing the hydrologic and hydraulic processes which occur in the catchment But despite the advances in including this additional detail the level of error in runoff estimates given rainfall does not seem to be significantly changed with increasing model complexity in fact it is not uncommon for the model s level of accuracy to deteriorate with increasing complexity In a latter section of this chapter a literature review of the state of the art in rainfall runoff modeling is compiled which includes many of the concerns noted by rainfall runoff modelers The review indicates that there is still no deterministic solution to the rainfall runoff modeling problem and that the error in runoff estimates produced from rainfall runoff models is of such magnitude that they should not be simply ignored *Groundwater Resources Development and Planning in the Semi-Arid Region* Chaitanya B. Pande,Kanak N. Moharir,2021-05-27 This book addresses the various challenges in achieving sustainable groundwater development management and planning in semi arid regions with a focus on India and discusses advanced remote sensing and GIS techniques for the estimation and management of groundwater resources The book is timely as there is a need for a better understanding of the various tools and methods required to efficiently and sustainably meet the growing demand for clean surface and groundwater in developing countries and how these tools can be combined with other strategies in a multi disciplinary fashion to achieve this goal in water scarce regions To wit the book combines remote sensing and GIS techniques runoff modeling aquifer mapping land use and land cover analyses evapotranspiration estimation crop coefficients and water policy approaches This will be of use to academics policymakers social scientists and professionals involved in the various aspects of sustainable groundwater development planning and management
