Shape Theory J.-M. Cordier, Timothy Porter, 2008-01-01 This in depth treatment uses shape theory as a case study to illustrate situations common to many areas of mathematics including the use of archetypal models as a basis for systems of approximations It offers students a unified and consolidated presentation of extensive research from category theory shape theory and the study of topological algebras A short introduction to geometric shape explains specifics of the construction of the shape category and relates it to an abstract definition of shape theory Upon returning to the geometric base the text considers simplicial complexes and numerable covers in addition to Morita s form of shape theory Subsequent chapters explore B nabou s theory of distributors the theory of exact squares Kan extensions the notion of a stable object and stability in an Abelian context The text concludes with a brief description of derived functors of the limit functor theory the concept that leads to movability and strong movability of systems and illustrations of the equivalence of strong movability and stability in many contexts

Categorical Decomposition Techniques in Algebraic Topology Gregory Arone, John Hubbuck, Ran Levi, Michael Weiss, 2012-12-06 The book consists of articles at the frontier of current research in Algebraic Topology It presents recent results by top notch experts and is intended primarily for researchers and graduate students working in the field of algebraic topology Included is an important article by Cohen Johnes and Yan on the homology of the space of smooth loops on a manifold M endowed with the Chas Sullivan intersection product as well as an article by Goerss Henn and Mahowald on stable homotopy groups of spheres which uses the cutting edge technology of topological modular forms

Handbook of the History of General Topology C.E. Aull, R. Lowen, 2013-04-18 This book is the first one of a work in several volumes treating the history of the development of topology The work contains papers which can be classified into 4 main areas Thus there are contributions dealing with the life and work of individual topologists with specific schools of topology with research in topology in various countries and with the development of topology in different periods The work is not restricted to topology in the strictest

sense but also deals with applications and generalisations in a broad sense Thus it also treats e g categorical topology interactions with functional analysis convergence spaces and uniform spaces Written by specialists in the field it contains a wealth of information which is not available anywhere else *Handbook of Algebraic Topology* I.M. James,1995-07-18 Algebraic topology also known as homotopy theory is a flourishing branch of modern mathematics It is very much an international subject and this is reflected in the background of the 36 leading experts who have contributed to the Handbook Written for the reader who already has a grounding in the subject the volume consists of 27 expository surveys covering the most active areas of research They provide the researcher with an up to date overview of this exciting branch of mathematics

Foundations of Software Science and Computation Structures Javier Esparza,Andrzej S. Murawski,2017-03-15 This book constitutes the proceedings of the 20th International Conference on Foundations of Software Science and Computation Structures FOSSACS 2017 which took place in Uppsala Sweden in April 2017 held as Part of the European Joint Conferences on Theory and Practice of Software ETAPS 2017 The 32 papers presented in this volume were carefully reviewed and selected from 101 submissions They were organized in topical sections named coherence spaces and higher order computation algebra and coalgebra games and automata automata logic and formal languages proof theory probability concurrency lambda calculus and constructive proof and semantics and category theory **Computer Aided Systems**

Theory - EUROCAST '95 Franz Pichler,Roberto Moreno-Diaz,Rudolf F. Albrecht,1996-01-24 This book presents a collection of revised refereed papers selected from the contributions to the Fifth International Workshop on Computer Aided Systems Theory EUROCAST 95 held in Innsbruck Austria in May 1995 The 42 full papers contained have been contributed by CAST theoreticians tool makers designers and appliers and reflect the full spectrum of activities in the area The papers are organized in sections on systems theory design environments complex systems design and specific applications *Computer Aided Systems Theory - EUROCAST '93* Franz Pichler,Roberto Moreno Diaz,1994-01-28 This volume contains a selection of papers presented at the third European Computer Aided Systems Theory workshop EUROCAST 93 held in Spain in February 1993 The workshop emphasizes interdisciplinarity with the specific goal of creating a synergy between fields such as systems theory computer science systems engineering and related areas The contributions in this volume are strongly related to current problems in CAST research They emphasize an engineering point of view concerning systems theory Since the computer is an essential instrument in CAST research there are close relations to specific topics in computer science The papers are grouped into parts on systems theory and systems technology specific methods and applications **Cahiers de topologie et géométrie différentielle catégoriques** ,1990 *Ontologies for Knowledge modeling in construction planning* Vito Getuli,2022-10-14 Nowadays there is an increasing recognition of the value of knowledge management in the construction projects and ontology based semantic modelling is seen as an important means of addressing this problem even if a knowledge base which maps the construction planning and scheduling domains in a formal and machine readable way is

still missing Addressing this issue the book is divided in two parts Part I theory is a theoretical introduction of on ontologies concepts and expert systems Part II application presents a research of ontologies development for semantic modelling of construction scheduling workspace product and time domains The last chapter presents the architecture of an ontology based expert system to show how ontologies can support automated planning mechanisms

Computer Aided Systems Theory - EUROCAST '91 Franz Pichler,Roberto Moreno Diaz,1992-04-08 This volume contains a selection of papers presented at the second European workshop EUROCAST 91 held in Krems Austria in April 1991 It gives an overview of the current state of Computer Aided Systems Theory research and its relation to CAD applications in the engineering fields CAST research requires the application of the most advanced information processing technology in software and hardware for the implementation of CAST method base systems Engineers in the field of information and control engineering have the opportunity in CAST to present the state ofthe art in modeling tools to computer scientists EUROCAST 91 proved that CAST research is still in an early state of development The papers in the volume are organized into sections on systems theory and CAST methodology modeling environments CAST method base systems and artificial vision and information and control systems

(Co)end Calculus Fosco Loregian,2021-07-22 The language of ends and co ends provides a natural and general way of expressing many phenomena in category theory in the abstract and in applications Yet although category theoretic methods are now widely used by mathematicians since co ends lie just beyond a first course in category theory they are typically only used by category theorists for whom they are something of a secret weapon This book is the first systematic treatment of the theory of co ends Aimed at a wide audience it presents the co end calculus as a powerful tool to clarify and simplify definitions and results in category theory and export them for use in diverse areas of mathematics and computer science It is organised as an easy to cite reference manual and will be of interest to category theorists and users of category theory alike

Computer Aided Systems Theory - EUROCAST 2001 Roberto Moreno-Diaz, Bruno Buchberger, Jose-Luis Freire, 2003-08-14 The concept of CAST as Computer Aided Systems Theory was introduced by F Pichler in the late 1980s to include those computer theoretical and practical developments as tools to solve problems in System Science It was considered as the third component the other two being CAD and CAM necessary to build the path from Computer and Systems Sciences to practical developments in Science and Engineering The University of Linz organized the first CAST workshop in April 1988 which demonstrated the acceptance of the concepts by the scientific and technical community Next the University of Las Palmas de Gran Canaria joined the University of Linz to organize the first international meeting on CAST Las Palmas February 1989 under the name EUROCAST 89 This was a very successful gathering of systems theorists computer scientists and engineers from most European countries North America and Japan It was agreed that EUROCAST international conferences would be organized every two years alternating between Las Palmas de Gran Canaria and a continental European location Thus successive EUROCAST meetings have taken place in Krems 1991 Las Palmas 1993 Innsbruck 1995 Las Palmas 1997 and Vienna 1999 in addition to an extra European CAST Conference in Ottawa in 1994

History of Topology I.M. James, 1999-08-24 Topology for many years has been one of the most exciting and influential fields of research in modern mathematics Although its origins may be traced back several hundred years it was Poincaré who gave topology wings in a classic series of articles published around the turn of the century While the earlier history sometimes called the prehistory is also considered this volume is mainly concerned with the more recent history of topology from Poincaré onwards As will be seen from the list of contents the articles cover a wide range of topics Some are more technical than others but the reader without a great deal of technical knowledge should still find most of the articles accessible Some are written by professional historians of mathematics others by historically minded mathematicians who tend to have a different viewpoint Journal of the Mathematical Society of Japan Nihon Sūgakkai, 1999 *Partial Differential Equations of Evolution* Jaroslav Barták, 1991 This introductory text on hyperbolic and parabolic equations is written for practising engineers Assuming only a basic knowledge of differential and integral calculus the equations studied are physically motivated and interpreted
