Shaping American Telecommunications A History Of Technology Policy And Economics:

Shaping American Telecommunications Christopher Sterling, Phyllis W. Bernt, Martin B.H. Weiss, 2006-08-15 Shaping American Telecommunications examines the technical regulatory and economic forces that have shaped the development of American telecommunications services. This volume is both an introduction to the basic technical economic and regulatory principles underlying telecommunications and a detailed account of major events that have marked development of the sector in the United States. Beginning with the introduction of the telegraph and continuing through to current developments in wireless and online services, authors Christopher H. Sterling, Phyllis W. Bernt, and Martin B. H. Weiss explain each stage of telecommunications development, examining the interplay among technical innovation, policy decisions, and regulatory developments. Offering an integrated treatment of the interplay among technology, policy, and economics as key factors defining the development of the telecommunications sector in the United States, this volume also provides background material to facilitate understanding of each sector's contexts for many so-called new issues, problems, and trends, demonstrating origins from years or decades in the past and careful annotation, documentation, and reference tables to enable further research on the topics discussed. This unique multidisciplinary approach provides a balanced view of U.S. telecommunications history in context with relevant economic, legal, social, and technical analyses. As such, it is essential reading for advanced students in telecommunications, needing to understand how the telecommunications industry and service developed to its current form. The volume will also serve as a supplemental text in courses on telecommunications regulation and will be of value to professionals in the field seeking context and background for their daily work.

The Liberalisation of the Telecommunications Sector in Sub-Saharan Africa and Fostering Competition in Telecommunications Services Markets Rachel Alemu,2018-02-02 This study investigates whether the existing regulatory framework governing the telecommunications sector in countries in Sub Saharan Africa effectively deals with emerging competition related concerns in the liberalised sector Using Uganda as a case study it analyses the relevant provisions of the law governing competition in the telecommunications sector and presents three key findings Firstly while there is comprehensive legislation on interconnection and spectrum management inefficient enforcement of the legislation has perpetuated concerns surrounding spectrum scarcity and interconnection Secondly the legislative framework governing anti competitive behaviour though in line with the established principles of competition law is not sufficient Specifically the framework is not equipped to govern the conduct of multinational telecommunications groups that have a strong presence in the telecommunications sector Major factors hampering efficient competition regulation include Uganda s sole reliance on sector specific competition rules restricted available remedies and a regulator with limited experience of enforcing competition legislation The weaknesses in the framework strongly suggest the need to adopt an economy wide competition law Lastly wireless technology is the main means through which the population in Uganda accesses telecommunications services Greater emphasis should be placed on regulating conduct in the wireless communications markets

Third World Citizens and the Information Technology Revolution N. General Purpose Technology, Spin-Out, and Innovation Hiroshi Shimizu,2019-05-17 This book focuses on exploring the relationship between spin outs from incumbents and the patterns of innovation in general purpose technology Do spin outs really promote innovation What happens if star scientists leave the incumbents and establish a startup to target

untapped markets Entrepreneurial spin outs have been recognized as an engine of innovation General purpose technology such as the steam engine in the Industrial Revolution has been considered an engine of growth This book provides new perspectives on how entrepreneurial spin outs shape the patterns of innovation in general purpose technology by integrating theoretical findings in industrial organizations and includes innovation studies and detailed evidence from a longitudinal case study Concretely by longitudinally exploring the technological development of laser diodes in the USA and Japan this study examines how the existence or absence of an entrepreneurial strategic choice for spin outs influences the patterns of subsequent technological development The longitudinal analysis in this book shows that spin outs could hinder the subsequent development of existing technology when that technology is still at a nascent level because the cumulative effects of technological development could disappear if research and development personnel leave their parent firms in order to target different sub markets The findings of this book show that institutional settings designed to promote spin outs do not necessarily promote innovation The book offers novel theoretical insights into the relationship between institutions promoting spin outs and the developments of general purpose technology

Critiquing Communication Innovation Rolien Hoyng, Gladys Pak Lei Chong, 2022-06-01 Challenges to Silicon Valley s dominant role in conjuring and patenting the world s technological futures are arising around the world As digital media technologies emerge from new globally dispersed locations a multipolar order of communication innovation seems to be in the making Yet recovering our ability to imagine futures otherwise requires negotiating conditions economic geopolitical sociocultural and ecological rather than reproducing them under the pretext of breaking with the present The essays in this volume examine research on such conditions critically and comparatively in a variety of geographies Paying due attention to China s rise as an innovative platform society and AI powerhouse this book addresses the broader question of a shifting world order and trends

that are shaped by China's influence but that extend beyond its borders. Looking at multipolar communication innovation through various critical lenses, our technological futures simultaneously appear to be old, new, and uncertain, while the infrastructures and platforms underpinning communication innovation both affiliate communities and set them apart.

Constitutionalism and a Right to Effective Government? Vicki C. Jackson, Yasmin Dawood, 2022-10-27 Nations around the world are facing various crises of ineffective government. Basic governmental functions protecting rights, preventing violence, and promoting material well-being are compromised, leading to declines in general welfare, in the enjoyment of rights, and even in democracy itself. This innovative collection featuring analyses by leaders in the fields of constitutional law and politics highlights the essential role of effective government in sustaining democratic constitutionalism. The book explores effective government as a right, principle, duty, and interest, situating questions of governance in debates about negative and positive constitutionalism. In addition to providing new conceptual approaches to the connections between rights and governance, the volume also provides novel insights into government institutions including courts, legislatures, executives, and administrative bodies, as well as the media and political parties. This is an essential volume for anyone interested in constitutionalism, comparative law, governance, democracy, the rule of law, and rights.

The Pennsylvania Railroad, Volume 1 Albert J. Churella, 2012-10-29 Do not think of the Pennsylvania Railroad as a business enterprise. *Forbes* magazine informed its readers in May 1936: "Think of it as a nation." At the end of the nineteenth century, the Pennsylvania Railroad was the largest privately owned business corporation in the world. In 1914, the PRR employed more than two hundred thousand people, more than double the number of soldiers in the United States Army. As the self-proclaimed Standard Railroad of the World, this colossal corporate body underwrote American industrial expansion and shaped the economic, political, and social environment of the United States. In turn, the PRR was fundamentally shaped by the American landscape, adapting to geography as well as shifts in competitive economics and public policy. Albert J. Churella's masterful account is certain to become the authoritative history of the Pennsylvania Railroad, illuminating broad themes in American history from the development of managerial practices and labor relations to the relationship between business and government, to advances in technology and transportation. Churella situates exhaustive archival research on the Pennsylvania Railroad within the social, economic, and technological changes of nineteenth and twentieth-century America, chronicling the epic history of the PRR intertwined with that of a developing nation. This first volume opens with the development of the Main Line of Public Works, devised by Pennsylvanians in the 1820s to compete with the Erie Canal. Though a public rather than a private enterprise, the Main Line foreshadowed the establishment of the Pennsylvania Railroad in 1846. Over the next decades, as the nation weathered the Civil War, industrial expansion, and labor unrest, the PRR expanded despite competition with rival railroads and disputes with such figures as Andrew Carnegie and John D. Rockefeller. The dawn of the twentieth century brought a measure of stability to the railroad industry, enabling the creation of such architectural monuments as Pennsylvania Station in New York City. The

volume closes at the threshold of American involvement in World War I as the strategies that PRR executives had perfected in previous decades proved less effective at guiding the company through increasingly tumultuous economic and political waters

The Formative Years of the Telegraph Union Gabriele Balbi, Simone Fari, Giuseppe Richeri, 2015-09-18 This volume brings together the results of fresh research into the formative years of the International Telegraph Union TU in the period 1849-1875. Its internationalist approach is based on the careful scrutiny of a wealth of primary sources: conference minutes, correspondence and parliamentary bills among others, and calls for a fresh appraisal of the mechanics of the TU itself as well as the moves and manoeuvres caused by constant diplomatic pressure. The methodology used here is multidisciplinary, representative of the contributors who come from various scientific approaches and possess different skills and competences. The result of over three years' detailed research, the book is simultaneously a history of media studies, international relations and business.
