nineteenth century two of the most significant theoretical works on color since Leonardo da Vinci's *Trattato della Pittura* were written and published in Germany Arthur Schopenhauer's *On Vision and Colors* and Philipp Otto Runge's *Color Sphere*. For Schopenhauer vision is wholly subjective in nature and characterized by processes that cross over into the territory of philosophy. Runge's *Color Sphere* and essay *The Duality of Color* contained one of the first attempts to depict a comprehensive and harmonious color system in three dimensions. Runge intended his color sphere to be understood not as a product of art but rather as a mathematical figure of various philosophical reflections. By bringing these two visionary color theories together within a broad theoretical context philosophy art architecture and design this volume uncovers their enduring influence on our own perception of color and the visual world around us.
