Radical Ecology in the Face of the Anthropocene Extinction John A. Smith, Anna Wilson, 2024-06-14 This book has two interlocking ambitions The first is to steer what we purposefully call the idioms of critical philosophy towards a more ecologically informed paradigm The second is to recognise that what has rightly come to be called The Anthropocene extinction is not and cannot be treated as simply a scientific fact but rather a socio political and ecological dispute of immense complexity We start with an exploration of the consequences of a critical tradition which under the name Enlightenment has placed humanity at its centre and chance as its most general and problematic characteristic We argue that this leads to a schizophrenic relationship between radical critique and science which can be avoided if we take the implications of biosemiotics seriously and develop a new ecologically informed social science We argue that in practice this means that for science to be practical in addressing the Anthropocene extinction we have to recognise that it operates in a historically emergent highly differentiated technopolitical ecology Science as it is currently commonly understood and used is not ecological enough This book will interest social scientists interested in not only describing and critiquing but also understanding and responding to the complex problems facing humanity scientists wanting to make sense of social phenomena those educating the next generation of social scientists and climate activists and policy makers

Old World and New World Perspectives in Environmental Philosophy Martin Drenthen, Jozef Keulartz, 2014-07-28 This is the first collection of essays in which European and American philosophers explicitly think out their respective contributions and identities as environmental thinkers in the analytic and continental traditions The American European as well as Analytic Continental collaboration here bears fruit helpful for further theorizing and research The essays group around three well defined areas of questioning all focusing on the amelioration management of environmentally historically and traditionally diminished landscapes The first part deals with differences between New World and the Old World perspectives on nature and landscape restoration in general the second focuses on the meaning of ecological restoration of cultural landscapes and the third on the meaning of the wolf and of wildness It does so in a way that the strengths of each philosophical school continental and analytic comes to the fore in order to supplement the other's approach This text is open to educated readers across all disciplines particularly those interested in restoration adaptation ecology the cultural construction of place and landscape the ongoing conversation about wilderness the challenges posed to global environmental change The text may also be a gold mine for doctoral students looking for dissertation projects in environmental philosophy that are inclusive of continental and analytic traditions This text is rich in innovative approaches to the questions they raise that are reasonably

well thought out The fact that the essays in each section really do resonate with one another directly is also intellectually exciting and very helpful in working out the full dimensions of each question raised in the volume *Veganarchism - Philosophy, Praxis, Self-criticism* Joseph Parampathu, 2020-10-10 **Radical Environmentalism** Peter C. Jacques, 2016-05-06 Environmental skepticism describes the viewpoint that major environmental problems are either unreal or unimportant In other words environmental skepticism holds that environmental problems especially global ones are inauthentic Peter Jacques describes both empirically and historically how environmental skepticism has been organized by mostly US based conservative think tanks as an anti environmental counter movement This is the first book to analyze the importance of the US conservative counter movement in world politics and its meaning for democratic and accountable deliberation as well as its importance as a mal adaptive project that hinders the world s people to rise to the challenges of sustainability Specific consideration is given to the threat of the counter movement to marginalized people of the world and its philosophical implications through its commitment to a deep anthropocentrism **Muslim Environmentalisms** Anna M. Gade, 2019-08-20 How might understandings of environmentalism and the environmental humanities shift by incorporating Islamic perspectives In this book Anna M Gade explores the religious and cultural foundations of Islamic environmentalisms She blends textual and ethnographic study to offer a comprehensive and interdisciplinary account of the legal ethical social and empirical principles underlying Muslim commitments to the earth Muslim Environmentalisms shows how diverse Muslim communities and schools of thought have addressed ecological questions for the sake of this world and the world to come Gade draws on a rich spectrum of materials scripture jurisprudence science art and social and political engagement as well as fieldwork in Indonesia and Southeast Asia The book brings together case studies in disaster management educational programs international development conservation projects religious ritual and performance and Islamic law to rethink key theories Gade shows that the Islamic tradition leads us to see the environment as an ethical idea moving beyond the established frameworks of both nature and crisis Muslim Environmentalisms models novel approaches to the study of religion and environment from a humanistic perspective reinterpreting issues at the intersection of numerous academic disciplines to propose a postcolonial and global understanding of environment in terms of consequential relations How to be a Green Liberal Simon A. Hailwood, 2014-12-18 It is often claimed by environmental philosophers and green political theorists that liberalism the dominant tradition of western political philosophy is too focused on the interests of human individuals to give due weight to the environment for its own sake In How to be a Green Liberal Simon Hailwood challenges this view and argues that liberalism can embrace a genuinely green non instrumental view of nature The book s central claim is that nature s otherness its being constituted of independent entities and processes that do not reflect our purposes is a basis for value and can be incorporated within liberal political philosophy as a fundamental commitment alongside human freedom and equality Hailwood argues that the conceptual resources already exist within mainstream liberalism for a thoroughly non instrumental perspective Adopting a rigorous philosophical approach Hailwood tackles a wide range of themes across

environmental ethics including holistic theories deep ecology eco feminism and eco anarchism as well as issues in value theory and political philosophy more generally In making the case for liberalism s green credentials How to be a Green Liberal is a formidable challenge to recent green political theory and will be required reading not only for students of political philosophy but for all those interested in the natural world and man s relationship to it *The Olympic Games and the Environment* J.
