Bremer, P.P. van der Werf, H.J.A. Röttgering, C.L. Carilli, 2012-12-06 Recent years have seen increasing evidence that the main epoch of galaxy formation in the universe may be directly accessible to observation Angular fluctuations in the background relict radiation have been detected by various ground based instruments as well as by the COBE satellite and suggest that the epoch of galaxy formation was not so very early Combined optical and radio studies have found galaxies at redshifts above 2.0 systems that at least superficially show the characteristics expected of large galaxies seen only shortly after their formation And absorption lines in the spectra of quasars seem to be telling us that most cold gas at early to intermediate cosmological epochs was in clouds having roughly galaxy sized masses What kinds of new observations will best help us study this high redshift universe in future What new instruments will be needed These are questions that loom large in the minds of the Dutch astronomical community as we celebrate 25 years of operation of the Westerbork Synthesis Radio Telescope Celebration of this Silver Jubilee has included a birthday party on 23 June 1995 a commemorative volume looking at both the history and the future of the facility The Westerbork Observatory Continuing Adventure in Radio Astronomy Kluwer 1996 and an international workshop held in the village of Hogeveen on 28-30 August 1995 *Proceedings of the IRE.* , 1962 Subject Catalog Library of Congress, 1977 Literature 1985, Part 1 S.
