Thomas Edward Meigs

Regulation Of Hmg Coa Reductase:

Regulation of HMG-CoA Reductase Benjamin Preiss, 2012-12-02 Regulation of HMG CoA Reductase is a nine chapter text that focuses on the research developments in the regulation of HMG CoA reductase enzyme and cholesterol biosynthesis This book deals first with the role of cholesterol in the regulation of its own biosynthesis and the work involving compactin and related competitive inhibitors of HMG CoA reductase The subsequent chapters examine the reversible phosphorylation of HMG CoA reductase in hormonal and other short term physiological changes and the structure and properties of the enzyme including evidence for modulation of enzyme activity and structure unrelated to phosphorylation These topics are followed by discussions on the regulation of reductase in the biosynthesis of ubiquinone dolichols and isopentenyl tRNA and the regulation of reductase activity in extrahepatic tissues This text further explores the contributions made through the use of cultured cells and their genetic manipulation with emphasis on the great potential of this approach The concluding chapters address the status of the low density lipoprotein pathway and related mechanisms These chapters also consider the regulation of human hepatic HMG CoA reductase and the special problems inherent in work with human tissues Enzyme scientists and researchers and graduate students will find this book invaluable

Mansbach II,Patrick Tso,Arnis Kuksis,2011-06-28 This book was stimulated by the enthusiasm shown by attendees at the meetings in Saxon River VT sponsored by the Federation of American Societies for Experimental Biology FASEB on the subject of the intestinal processing of lipids When these meetings were first started in 1990 the original organizers two of whom are editors of this volume CMM and PT had two major goals The first was to bring together a diverse group of investigators who had the common goal of gaining a better understanding of how the intestine absorbs lipids The second was to stimulate the interest of younger individuals whom we wished to recruit into what we believed was an exciting and fruitful area of research Since that time the field has opened up considerably with new questions being asked and new answers obtained suggesting that our original goals for the meetings were being met In the same spirit it occurred to us that there has not been a recent book that draws together much of the information available concerning how the intestine processes lipids This book is intended to reach investigators with an interest in this area and their pre and post doctoral students The chapters are written by individuals who have a long term interest in the areas about which they write and many have been speakers at the subsequent FASEB conferences that have followed on the first
