Written and Spoken Language Development across the Lifespan Joan Perera, Melina Aparici, Elisa Rosado, Naymé Salas, 2015-11-23 This multidisciplinary volume offers insights on oral and written language development and how it takes place in literate societies The volume covers topics from early to late language development its interaction with literacy practices including several languages monolingual and multilingual contexts different scripts as well as typical and atypical development Inspired by the work of Liliana Tolchinsky a leading expert in language and literacy development a group of internationally renowned scholars offers a state of the art overview of current thinking in language

development in literate societies in its broadest sense Contributors offer a personal tribute to Liliana Tolchinsky in the opening section *Social interaction, Social Context, and Language* Dan Isaac Slobin, Julie Gerhardt, Amy Kyratzis, Jiansheng Guo, 2014-07-10 This collection of essays is a representative sample of the current research and researchers in the fields of language and social interactions and social context The opening chapter entitled Context in Language is written by Susan Ervin Tripp whose diverse and innovative research inspired the editors to dedicate this book to her honor Ervin Tripp is known for her work in the fields of linguistics psychology child development sociology anthropology rhetoric and women s studies She has played a central role in the definition and establishment of psycholinguistics child language development and sociolinguistics and has been an innovator in terms of approaches and methods of study This book covers a wide range of research interests in the field from linguistically oriented approaches to social and ethnography oriented approaches The issue of the relationships between forms and structures of language and social interactions is examined in studies of both adult and child speech It is a useful anthology for graduate students studying language and social interaction as well as for researchers in this field **Crosslinguistic Approaches to the Psychology of Language** Jiansheng Guo, Elena Lieven, Nancy Budwig, Susan Ervin-Tripp, Keiko Nakamura, Seyda Ozcaliskan, 2010-10-18 Inspired by the pioneering work of Dan Slobin this volume discusses language learning from a crosslinguistic perspective integrates language specific factors in narrative skill covers the major theoretical issues and explores the relationship between language and cognition *Space in Languages* Maya Hickmann, Stéphane Robert, 2006-01-01 Space is presently the focus of much research and debate across disciplines including linguistics anthropology psychology and philosophy One strong feature of this collection is to bring together theoretical and empirical contributions from these varied scientific traditions with the collective aim of addressing fundamental questions at the forefront of the current literature the nature of space in language the linguistic relativity of space the relation between spatial language and cognition Linguistic analyses highlight the multidimensional and heterogeneous nature of space while also showing the existence of a set of types parameters and principles organizing the considerable diversity of linguistic systems and accounting for mechanisms of diachronic change Findings concerning spatial perception and cognition suggest the existence of two distinct systems governing linguistic and non linguistic representations that only partially overlap in some pathologies but they also show the strong impact of language specific factors on the course of language acquisition and cognitive development 11th Conference on British and American Studies Marinela Burada, Raluca Sinu, Oana Tatu, 2015-01-12 The present volume includes a selection of twenty nine papers by academics and senior and junior researchers who came together within the framework of the 11th Conference on British and American Studies Structured into three sections the contributions included here display a wide array of topics and methodologies illustrating a variety of scholarly pursuits and approaches These in their turn reflect the issues which constitute the complex nature of language and culture and their mutual relationship The authors interests encompass aspects related to the

structural and rhetorical organization of languages approached both individually and cross linguistically first and second language acquisition issues of translation and rendering considered from linguistic and cultural perspectives and the cultural construction of meaning and identity as reflected in literature and art Narrative Development in a Multilingual Context Ludo Th Verhoeven, Sven Strömqvist, 2001-01-01 In this volume the results of a number of empirical studies of the development of narrative construction within a multilingual context are presented and discussed It is explored what operating principles underlie the process of narrative production in L1 and L2 Developmental relations between form and function will be studied across a broad range of functional categories such as temporality perspective connectivity and narrative coherence Moreover a variety of language contact situations is considered with broad variation in the typological distances between the languages in order to enable cross linguistic comparison The analysis of learner data in various cross linguistic settings may thus offer new information on the role of the structural properties of unrelated languages on the process of narrative acquisition In the present volume an attempt is also made to find out how transfer from one language to the other is facilitated Finally the effects of input on narrative construction in children s first and second language are examined in several studies *Acquisition and Development of Hebrew* Ruth A. Berman, 2016-08-25 The volume addresses developing knowledge and use of Hebrew from the dual perspective of typologically specific factors and of shared cross linguistic trends aimed at providing an overview of acquisition in a single language from infancy to adolescence while also shedding light on key issues in the field as a whole Essentially non partisan in approach the collection includes distinct approaches to language and language acquisition formal universalist pragmatic usage based cognitive constructivist and deals with a range of topics not often addressed within a single volume phonological perception and production inflectional and derivational morphology simple clause structure and complex syntax early and later literacy writing systems with data deriving from varied research methodologies interactive conversations and extended discourse adult input and child output longitudinal and cross sectional corpora structured elicitations Each chapter provides background information on Hebrew specific facets of the topic of concern but typically avoids ethno centrality by relating to more general issues in the domain The book should thus prove interesting and instructive for linguists psychologists and educators and for members of the child language research community both within and beyond the confines of Hebrew language expertise *Variation and Change in the Encoding of Motion Events* Juliana Goschler, Anatol Stefanowitsch, 2013-11-14 The linguistic typology of motion event encoding is one of the central topics in Cognitive Linguistics A vast body of typological contrastive and psycholinguistic research has shown the potential but also the limitations of the original distinction between verb framed and satellite framed languages This volume contains ten original papers focusing specifically on the variation and change of motion event encoding in individual languages and language families The authors show that some of the central claims about motion event encoding need careful re examination and reformulation and that individual languages and language families are more

variable across space and time than even a refined typology could neatly capture at this time The volume thus contributes to a more detailed and fine grained foundation for the investigation of conceptual causes and consequences of different motion event encoding strategies

Children's Discourse Maya Hickmann, 2002-11-21 This comparative study explores two central questions in the study of first language acquisition What is the relative impact of structural and functional determinants What is universal versus language specific during development Maya Hickmann addresses these questions in three domains of child language reference to entities the representation of space and uses of temporal aspectual markings She provides a thorough review of different theoretical approaches to language acquisition and a wide range of developmental research as well as examining all three domains in English French German and Chinese narratives Hickmann's findings concern the rhythm of acquisition the interplay among different factors syntactic semantic pragmatic determining children's uses and universal versus variable aspects of acquisition Her conclusions stress the importance of relating sentence and discourse determinants of acquisition in a crosslinguistic perspective *Children's Discourse* will be welcomed by those working in psychology and language related disciplines interested in first language acquisition
