Sharing The Planet Populationconsumptionspecies Science And Ethics For A Sustainable And Equitable World:

Climate, God and Uncertainty Arthur C. Petersen, 2023-11-28 *Climate God and Uncertainty* moves beyond Bruno Latour's thought to understand what climate change means for philosophical anthropology and wider culture. What are for example the philosophical implications of climate change and its associated uncertainties? Referring mainly to works by Latour, William James and Heinrich Rickert, Petersen develops transcendental naturalism to reinterpret the interface between science and politics in the context of climate change. He highlights for instance issues such as the religious disenchantment of nature, the scientific disbelief in a plurality of value-laden perspectives and the disregard for non-modern worldviews in politics. In developing its argument, the book makes a methodological intervention on the sort of naturalism that guides both Latour's work and a large part of the academic field called science and religion. *Praise for Climate God and Uncertainty* The challenges of a changing climate raise disturbing questions about being human in the world, ones that cannot adequately be answered through scientific inquiry. In this original interrogation and extension of the work of Bruno Latour, Petersen constructs a philosophical position that takes seriously the realities of a changing natural world, the human search to ground our sense of value and the possibility of God. *Climate God and Uncertainty* is an exciting new addition to the small but growing literature on climate change, religion and philosophy. Mike Hulme, University of Cambridge This innovative and exciting work explores the rich potential of transcendental naturalism as a bridge between science and religion. Drawing on the work of William James, Heinrich Rickert and Bruno Latour, Petersen maps out a fresh approach that goes beyond current accounts of naturalism, opening up a deeply satisfying account of our engagement with the natural world. Alister McGrath, Emeritus, Andreos Idreos, Professor of Science and Religion, University of Oxford How to live with the pervasive reality of uncertainty and a plurality of perspectives in science, religion and politics without playing down the sciences and our responsibilities? The transcendental naturalism Arthur Petersen articulates in this book respects science while leaving room for other elements, wonder, judgements and values, and the way we construct provisional models of reality. These issues are especially acute in the context of climate change when we face the interplay of science and policy. Petersen stresses the importance of imagination to articulate meaning and of recognising a plurality of value-laden perspectives striving for responsible action and sensitivity to that which may escape planning and policy. This book can be read fruitfully in at least two ways: as a highly relevant reflection on religion and science in the face of climate change and as a profound philosophical analysis of pluralism and provisionality and hence of living with uncertainty. Willem B. Drees, Professor Emeritus of Philosophy of Religion and Ethics, Leiden University and of Philosophy of the Humanities, Tilburg University [Measuring Sustainable Development: Integrated Economic, Environmental and Social Frameworks](#) OECD, 2004-07-07 The papers in this conference proceedings address the various conceptual measurement and statistical policy issues that arise when applying accounting frameworks to the concept of sustainable development. **Handbook of Risk Theory** Sabine Roeser, 2012 Risk has become

one of the main topics in fields as diverse as engineering medicine and economics and it is also studied by social scientists psychologists and legal scholars But the topic of risk also leads to more fundamental questions such as What is risk What can decision theory contribute to the analysis of risk What does the human perception of risk mean for society How should we judge whether a risk is morally acceptable or not Over the last couple of decades questions like these have attracted interest from philosophers and other scholars into risk theory This handbook provides for an overview into key topics in a major new field of research It addresses a wide range of topics ranging from decision theory risk perception to ethics and social implications of risk and it also addresses specific case studies It aims to promote communication and information among all those who are interested in theoretical issues concerning risk and uncertainty This handbook brings together internationally leading philosophers and scholars from other disciplines who work on risk theory The contributions are accessibly written and highly relevant to issues that are studied by risk scholars We hope that the Handbook of Risk Theory will be a helpful starting point for all risk scholars who are interested in broadening and deepening their current perspectives

Philip Cafaro,2015-02-06 From the stony streets of Boston to the rail lines of California from General Relativity to Google one of the surest truths of our history is the fact that America has been built by immigrants The phrase itself has become a steadfast campaign line a motto of optimism and good will and indeed it is the rallying cry for progressives today who fight against tightening our borders This is all well and good Philip Cafaro thinks for the America of the past teeming with resources opportunities and wide open spaces but America isn t as young as it used to be and the fact of the matter is we can t afford to take in millions of people anymore We ve all heard this argument before and one might think Cafaro is toeing the conservative line but here s the thing he s not conservative not by a long shot He s as progressive as they come and it s progressives at whom he aims with this book s startling message massive immigration simply isn t consistent with progressive ideals Cafaro roots his argument in human rights equality economic security and environmental sustainability hallmark progressive values He shows us the undeniable realities of mass migration to which we have turned a blind eye how flooded labor markets in sectors such as meatpacking and construction have driven down workers wages and driven up inequality how excessive immigration has fostered unsafe working conditions and political disempowerment how it has stalled our economic maturity by keeping us ever focused on increasing consumption and growth and how it has caused our cities and suburbs to sprawl far and wide destroying natural habitats driving other species from the landscape and cutting us off from nature In response to these hard hitting truths Cafaro lays out a comprehensive plan for immigration reform that is squarely in line with progressive political goals He suggests that we shift enforcement efforts away from border control and toward the employers who knowingly hire illegal workers He proposes aid and foreign policies that will help people create better lives where they are And indeed he supports amnesty for those who have at tremendous risk already built their lives here Above all Cafaro attacks our obsession with endless material growth offering in its place a mature vision of America not brimming but balanced where all the different people who constitute this great nation of immigrants can live sustainably and well sheltered by a prudence currently in short supply in American politics Uncertain Risks Regulated Ellen Vos,Michelle Everson,2009-01-26

Uncertain Risks Regulated compares various models of risk regulation in order to understand how these systems shape the relationship between law and science and how they attempt to overcome public distrust in science based decision making The book contributes to the ongoing debate relating to uncertainty and risks and the difficulties faced by the European Union in particular in regulating these issues taking account of both national and international constraints The term uncertain risk is comparable with notions of hazard and indeterminate risk as deployed within the social sciences but it also aims to capture the modern regulatory reality that a non quantifiable hazard must still be addressed by society law and its regulators Decisions must be taken in the face of uncertainty And whilst it is not possible to provide clear cut models of risk regulation in focusing on regulatory practices at a national EU and international level the contributors to this volume aim to use fact finding as a core instrument of learning for risk regulation
