Shark Chronicles A Scientist Tracks The Consummate Predator:

The Shark Chronicles John A. Musick, Beverly McMillan, 2003-06 A scientific exploration of sharks draws on the latest research to profile the shark's unique navigation instincts, body chemistry and behaviors while considering factors that are compromising their survival

Shark Quest Karen Romano Young, 2018-08-01 Sharks are in trouble. Fifty shark species are at high risk of extinction and another sixty-three are threatened. These intelligent, mysterious and sometimes scary fish evolved about 420 million years ago. They have adapted to survive deep in the ocean and in shallow water habitats. Commercial fishing and finning are threatening shark populations. So is water pollution. Marine biologists and others, including young people, are working together to save these fascinating predators. Discover the work of scientists and conservationists as they study shark biology and morphology, research migration, feeding and mating patterns, delve into human climate and other threats to shark habitat, and develop sophisticated technologies to aid sharks and shark research. See how scientists also educate the public about real and imagined fear of sharks and encourage citizen participation in shark conservation efforts. Learn about high-tech tagging for tracking shark migration paths. Discover the autonomous underwater vehicles and drones that divers use to observe and photograph sharks up close. Visit shark sanctuaries in the South Pacific Ocean. You'll even meet the Shark Lady, aka Eugenie Clark, a pioneer ichthyologist, shark scientist. Through research and advocacy, people around the world are working to protect and admire sharks. An engaging, well-researched book about a much-maligned species of fish that deserves our protection. Booklist: A remarkably thorough tour of the world of sharks and marine scientists' efforts to educate the public about our ocean's apex predators. Kirkus Reviews

[Sharkpedia](#) Daniel Abel, 2024-05-28 A fun, pocket-size A-Z treasury about sharks featuring fascinating little-known facts and captivating illustrations. Sharkpedia is an entertaining and enlightening celebration of sharks featuring close to 100 entries based on the latest knowledge and enriched by original illustrations. Avoiding tired factoids, shark authority Daniel Abel gives new bite to essential information about sharks, including their adaptations as top predators, 450-million-year evolution, behavioral complexity, ecological importance, existential threats, and often sensationalized appearances in popular culture, from *Jaws* to Shark Week. The notion that sharks are insatiable killing machines is a toothless myth, yet the fear of shark attacks still holds on to many people like a set of locked jaws. Sharkpedia reveals that sharks are much less to be feared and much more interesting, complicated and important than many realize. Filled with compelling stories, Sharkpedia debunks shark myths, for example that sharks are large and coastal when in fact most are small and inhabit the deep sea, describes their lives, where and how long they live, how many offspring they have, what they eat, and how their bodies function. Introduces a variety of iconic and obscure species, such as the Happy Eddie Shyshark. Explores our love-hate relationship with sharks and much more. With charming drawings by leading shark artist Marc Dando, Sharkpedia is a scientific and cultural treasure trove that will leave you with new insights about these remarkable animals. Dive in! Features a cloth cover with an elaborate foil-stamped
