Nihoul,1989-07-01 The 20th Li ge Colloquium was particularly well attended and these proceedings demonstrate the significant progress achieved in understanding modelling and observing geostrophic and near geostrophic turbulence The book contains more than 50 review papers and original contributions covering most aspects of the field of mesoscale synoptic coherent structures in geophysical oceanographic turbulence The properties of isolated vortices generation evolution decay their interactions with other vortices with larger scale currents and or with topography are investigated theoretically and by means of numerical and physical models Observation of these dynamically important features in different parts of the world ocean are reported Of particular interest will be the fourteen contributions by scientists from the USSR which emphasize the international character of the meeting The book thus constitutes a useful and complete overview of the current state of the art

Interhemispheric Water Exchange in the Atlantic Ocean G.J. Goni,P. M. Rizzoli,2003-11-12 Recent results from modeling and observational studies demonstrate that the tropical Atlantic is a critical region for processes that maintain the meridional overturning circulation such as cross equatorial exchanges and for sea surface temperature variability that impacts on climate variability of the coupled tropical ocean atmosphere system The theme of this book is the inter hemispheric and inter gyre exchanges of heat salt and fresh water while its goal is to improve the knowledge of the tropical Atlantic dynamics and how it affects the global ocean A clear understanding of the dynamics of processes that affect the flow of mass and heat between the southern and the northern hemispheres in the upper few hundred meters in the tropical Atlantic and of those associated to the ocean circulation or to surface signals from decadal inter annual to mesoscale periods becomes necessary to better evaluate their contribution to the interhemispheric mass exchange These processes are believed to be largely responsible in driving the sea surface temperature which in turn is a critical parameter to investigate ocean atmospheric interactions Output produced by regional models is also used to complement the observations and to provide additional information on their spatial and temporal variability The subtropical cells by bringing water masses subducted in the subtropics to the equator and zonal currents investigated here contribute to the interhemispheric water exchange Special attention is also given to the warm and salty anticyclonic rings shed by the North Brazil Current which are now known to have a much broader impact not only on interhemispheric water mass transfer but also on the environment of remote regions Observations from different sources are blended together are used to validate model outputs and are also assimilated into models to obtain a more complete and accurate picture of the oceanic circulation and of its time evolution Ocean

Circulation and Air-Sea Interaction in the South China Sea Dongxiao Wang,2022-10-28 This book summarizes achievements of the study on circulation and air sea interaction and development of the ocean observation network in the South China Sea in the last 20 years thus serving as a comprehensive reference book to understand the dynamic environment in the SCS It consists of seven chapters briefly reviewing our understanding of the SCS circulation and air sea interaction in chapter 1

then describing in detail the upper layer circulation from large scale SCS through flow SCS western boundary current etc to meso and submeso scale in Chapters 2 and 5 dilute river plume and coastal upwelling over the shelf in Chapter 3 deep ocean circulation in Chapter 4 tropical cyclone activities and air sea flux at the interface in Chapter 6 and the construction of the observation network and database in Chapter 7 Besides the basic features of these physical processes the book also discusses their variations and fundamental dynamics Thus it is written in a way that meets the different information demands from researchers working in various marine related fields *Monthly Weather Review* ,2003 *Computer Science Handbook* Allen B.
