Ethics Bob Fischer, 2019-12-06 There isn't one conversation about animal ethics. Instead, there are several important ones that are scattered across many disciplines. This volume both surveys the field of animal ethics and draws professional philosophers, graduate students and undergraduates more deeply into the discussions that are happening outside of philosophy departments. To that end, the volume contains more nonphilosophers than philosophers, explicitly inviting scholars from other fields such as animal science, ecology, economics, psychology, law, environmental science and applied biology among others to bring their own disciplinary resources to bear on matters that affect animals. The Routledge Handbook of Animal Ethics is composed of 44 chapters, all appearing in print here for the first time and organized into the following six sections: I Thinking About Animals, II Animal Agriculture and Hunting, III Animal Research and Genetic Engineering, IV Companion Animals, V Wild Animals, Conservation, Management and Ethics, VI Animal Activism. The chapters are brief and they have been written in a way that is accessible to serious undergraduate students regardless of their field of study. The volume covers everything from animal cognition to the state of current fisheries, from genetic modification to intersection animal activism. It is a resource designed for anyone interested in the moral issues that emerge from human interactions with animals. Beef Cattle Production and Trade Lewis Kahn, David Cottle, 2014-04-15 Beef Cattle Production and Trade covers all aspects of the beef industry from paddock to plate. It is an international text with an emphasis on Australian beef production, written by experts in the field. The book begins with an overview of the historical evolution of world beef consumption and introductory chapters on carcass and meat quality, market preparation and world beef production. North America, Brazil, China, South East Asia and Japan are discussed in separate chapters, followed by Australian beef production including feedlotting and live export. The remaining chapters summarise R & D, emphasising the Australian experience and look at different production systems and aspects of animal husbandry such as health, reproduction, grazing, feeding and finishing, genetics and breeding, production efficiency, environmental management and business management. The final chapter examines various case studies in northern and southern Australia, covering feed demand and supply, supplements, pasture management, heifer and weaner management and management of internal and external parasites.
