Anti-Aging Medicine Hidekazu Yamada, Yuji Naito, 2025-02-05

This textbook considers aging as a disease and summarizes the leading edge research and facts on anti-aging medicine and the aging mechanism. It provides the basics and biology of aging science followed by presenting clinical studies such as exercise, nutrition, mental health, brain, sleep, and treatment interventions. The book also discusses aging control and considers behavioral, environmental, and societal implications for healthy aging. The field of aging science is interdisciplinary and there are much more uncertainties; thus, it is crucial to summarize what is currently known to set a foundation for future research. The International Classification of Diseases by the World Health Organization (WHO) has given the aging-related disease a subcode of XT9T. This trend advanced research of aging-related sicknesses and the concept that infirmities associated with old age can be controlled such as cancer, dementia, and cardiovascular diseases. Basic research has progressed and clinical applications have become available, resulting in significant social changes. As increased life expectancy is happening over the globe, we are facing unprecedented challenges, and anti-aging medicine is a key to treating population growth, environmental problems, etc., as problems for the entire planet.

Anti-Aging Medicine: Basics and Clinical Practice is an English translation of the publication by the Japanese Society of Anti-Aging Medicine. It is an insightful source for healthcare professionals and scholars in anti-aging and geriatrics. It will attract pharmaceutical, Information Technology, and Artificial Intelligence industries associated with aging-responsive markets. The English translation of this book, originally in Japanese, was facilitated by artificial intelligence. A subsequent human revision of the content was done by the editors and authors.

Nutrition, Food and Diet in Ageing and Longevity Suresh I. S. Rattan, Gurcharan Kaur, 2021-10-03

This edited volume is a compilation of 30 articles discussing what constitutes food for health and longevity. The aim is to provide up-to-date information, insights, and future tendencies in the ongoing scientific research about nutritional components, food habits, and dietary patterns in different cultures. The health-sustaining and health-promoting effects of food are certainly founded in its overall composition of macronutrients and micronutrients. However, the consumption of these nutrients is normally in the form of raw or prepared food from the animal and plant sources. The book is divided into four parts and a conclusion and successfully conveys the well-established information and knowledge along with the personal views of a diversified group of researchers and academicians on the multifaceted aspects of nutrition, food, and diet. The first part reviews the scientific information about proteins, carbohydrates, fats, and oils, micronutrients, probiotics, and hormetins, along with a discussion of the evolutionary principles and constraints about what is optimal food, if any. The second part discusses various kinds of foods and food supplements with respect to their claimed benefits for general health and prevention of some diseases. The third part brings in the cultural aspects such as what are the principles of healthy eating according to the traditional Chinese and Indian systems, what is the importance of meal times and daily rhythms, and how different cultures

have developed different folk wisdoms for eating for health longevity and immortality In the part four various approaches which are either already in practice or are still in the testing and research phases are discussed and evaluated critically for example intermittent fasting and calorie restriction food based short peptides senolytics Ayurvedic compounds optimal food for old people and food for the prevention of obesity and other metabolic disorders The overreaching aim of this book is to inform inspire and encourage students researchers educators and medical health professionals thinking about food and food habits in a holistic context of our habits cultures and patterns Food cannot be reduced to a pill of nutritional components Eating food is a complex human behavior culturally evolved over thousands of years Perhaps the old adage we are what we eat needs to be modified to we eat what we are The Climatic Factor as Illustrated in Arid America Ellsworth

Clark, 2004

Atherosclerosis is a degenerative condition in which arteries build up deposits called plaques atheromas which consist of lipids mainly cholesterol connective tissue and smooth muscle cells originating from the arterial wall Plaques develop quietly over a period of years and are unnoticeable until there is an interruption in the normal flow of blood Plaques may partially or totally block the blood's flow through an artery Two things that can happen where plaques occur are bleeding hemorrhage into the plaque and formation of a blood clot thrombus on the plaque's surface Atherosclerosis affects large and medium sized arteries The type of artery and where the plaque develops varies with each person Atherosclerosis research has witnessed startling progress in recent years partially due to new drugs as well as to new breakthroughs in molecular medicine **Annual Review of Gerontology and Geriatrics, Volume 34, 2014** Richard Sprott, 2014-03-20 Enormous

advances in our knowledge of genetic contributions to aging and disease and in our understanding of the potential for manipulation of the aging process have taken place during the past 20 years This is the first volume in decades to consolidate this research in one place It provides a broad and current overview of the most promising advances in genetic research on aging current understanding of genetic contributions to the basic processes of aging and age related disease The Review focuses on the aging process from lower organisms to man and is organized in ascending order of biological complexity

starting with stem cells and progressing through worms flies mice and humans Where relevant the Review also includes information about yeasts and non human primates The research presented in the Review uses a species comparative approach that makes finding cross species similarities gene conservation and differences gene differentiation apparent This approach reflects the way in which the field is organized making it highly useful for investigators who want quick access and a concise summary of a particular topic Key Features Provides state of the art information about promising advances in genetic research on aging Comprises the first comprehensive volume regarding genetic research about aging in decades Authored by leading scholars in the field Disseminates enormous advances in our understanding of the aging process

The Frailty Model Luc Duchateau,Paul Janssen,2007-10-23 Clustered survival data are encountered in many scientific disciplines including human and veterinary medicine biology epidemiology public health and demography Frailty models provide a powerful tool to analyse clustered survival data In contrast to the large number of research publications on frailty models relatively few statistical software packages contain frailty models It is demanding for statistical practitioners and graduate students to grasp a good knowledge on frailty models from the existing literature This book provides an in depth discussion and explanation of the basics of frailty model methodology for such readers The discussion includes parametric and semiparametric frailty models and accelerated failure time models Common techniques to fit frailty models include the EM algorithm penalised likelihood techniques Laplacian integration and Bayesian techniques More advanced frailty models for hierarchical data are also included Real lifeexamples are used to demonstrate how particular frailty models can be fitted and how the results should be interpreted The programs to fit all the worked out examples in the book are available from the Springer website with most of the programs developed in the freeware packages R and Winbugs The book starts with a brief overview of some basic concepts in classical survival analysis collecting what is needed for the reading on the more complex frailty models Trends, Trajectories and Predictors of Healthy Aging Yunhwan Lee,Hiroyuki Sasai,Matthew

Lohman,2025-02-27 In a rapidly aging world population healthy aging has come to the forefront as a viable target for maintaining active living in the community sustaining the health and long term care system and alleviating the rising care costs The key to healthy aging is functioning that encompasses physical psychological cognitive and social aspects However more information about the current status and trends in healthy aging globally is needed The within and between country variations in the level of healthy aging will help us to understand how each country is coping to maintain the health of its aging population In addition identifying factors that affect healthy aging can lead to developing programs and policies contributing to healthy longevity **Subjective Logic** Audun Jøsang,2016-10-27 This is the first comprehensive treatment of subjective logic and all its operations The author developed the approach and in this book he first explains subjective opinions opinion representation and decision making under vagueness and uncertainty and he then offers a full definition of subjective logic harmonising the key notations and formalisms concluding with chapters on trust networks and subjective

Bayesian networks which when combined form general subjective networks The author shows how real world situations can be realistically modelled with regard to how situations are perceived with conclusions that more correctly reflect the ignorance and uncertainties that result from partially uncertain input arguments The book will help researchers and practitioners to advance improve and apply subjective logic to build powerful artificial reasoning models and tools for solving real world problems A good grounding in discrete mathematics is a prerequisite

Centenarians—A Model to Study the Molecular Basis of Lifespan and Healthspan Annibale Puca, Calogero Caruso, 2021-06-15 People around the world are living longer For the first time in history most humans will live to be sixty and beyond By 2050 the world's population aged 60 and over will reach a total of 2 billion up from 900 million in 2015 Today 125 million people are 80 years of age or older By 2050 there will be 434 million people in this age group worldwide In addition the pace of aging of the world population is also increasing However there is not enough evidence to show that older people have better health than their parents While rates of severe disability have declined over the past 30 years but only in high income countries there have been no significant changes in mild to moderate disability over the same period of time Indeed the increase in the duration of life lifespan does not coincide with the increase in the duration of health healthspan that is the period of life free from serious chronic diseases and disabilities Therefore the identification of the factors that predispose to a long and healthy life as discussed in the papers of this book is of enormous interest for translational medicine

International Review of Cell and Molecular Biology, 2016-01-28 International Review of Cell and Molecular Biology presents comprehensive reviews and current advances in cell and molecular biology The series has a worldwide readership maintaining a high standard by publishing invited articles on important and timely topics authored by prominent cell and molecular biologists Provides comprehensive reviews and current advances Presents a wide range of perspectives on specific subjects Valuable reference material for advanced undergraduates graduate students and professional scientists

Stem Cell Biology and Regenerative Medicine Charles Durand, Pierre Charbord, 2022-09-01 The study of stem cell biology is under intensive investigations Because stem cells have the unique capability to self renew and differentiate into one or several cell types they play a critical role in development tissue homeostasis and regeneration Stem cells also constitute promising cell candidates for cell therapy The aim of this book is to provide an accurate knowledge on stem cell biology and regenerative medicine This book will cover many topics in the field and is based on seminars given by recognized scientists involved the international master program on stem cell biology at the University Pierre and Marie Curie UPMC in Paris
