Environmental Impact Statement (EIS) for the proposed project. The EIS is a key document in the NEPA process, providing detailed information about the project's potential impacts on the environment. The EIS is prepared by the project sponsor and is submitted to the EPA for review. The EPA then issues a decision on whether to approve the project, taking into account the information provided in the EIS and any other relevant information. The EIS process is a critical part of the NEPA process, ensuring that the public and decision-makers have the information they need to make informed decisions about the project.

Results will also provide an insight into the effects of the different types of information on the decision-making process. The results will be discussed in the context of the existing literature on the effects of information on decision-making.

The affective city Stefano Catucci, Federico De Matteis, 2022-01-21 Cities are not made only of stone they harbor ways of life practices movements moods atmospheres feelings Yet the ineffable nature of affects has long deprived human passions of a meaningful role when it comes to observing urban space and envisioning its future transformation With this book we explore the contemporary city and its transitional conditions from a different perspective a quest to understand how the space of collective life and the feelings this engenders are connected how they mutually give form to each other In an interdisciplinary collection of essays The Affective City means to open a discussion on the soft presences animating the world of urban objects beyond the city built out of mere things this book's focus is on the forces that make urban life emerge thrive flourish but also wither and sometimes die A task crucial for the survival of cities as human habitats in an urban world that with every passing day seems to draw closer a crisis

Urban Design Jon Lang, 1994 Urban Design the American Experience Jon Lang Urban Design The American Experience places social and environmental concerns within the context of American history It returns the focus of urban design to the creation of a better world It evaluates the efforts of designers who apply knowledge about the environment and people to the creation of livable enjoyable and even inspiring built worlds Urban Design The American Experience emphasizes that urban design must take a user oriented approach to achieve a higher quality of life in human settlements All the keys to this approach are spelled out in chapters that address Urban design as both a product and process of communal decision making Types of knowledge required as a base for urban design action How to apply recent environmental and behavioral research to professional design How human needs are fulfilled through design The true role of functionalism in design Urban design efforts of the twentieth century in the United States are examined within their socio political context Jon Lang reviews the urban design experience from the beginning of the City Beautiful movement paying particular attention to developments since World War II He explores how the twentieth century city has developed as well as discusses the attitudes that have driven major movements in urban design Readers learn a neo Modernist approach that builds on the successes and failures of Rationalism and Empiricism the two major streams of Modernist thought in architecture and urban design They also gain

an understanding of how the environment is experienced by people and the implications of this experiencing for architectural and urban design Numerous illustrations throughout demonstrate how various design schemes can be used Urban Design The American Experience provides architects designers city planners and students in these fields with a model for their own future development as professionals It is a valuable guide to design methodology procedural theory and other issues related to creating optimal urban environments Planning American Society of Planning Officials,1973 *Kenzo Tange and the Metabolist Movement* Zhongjie Lin,2023-08-31 Amid Japan s political turbulence in 1960 seven architects and designers founded Metabolism to propagate radical ideas of urbanism Kenz Tange s Plan for Tokyo 1960 further celebrated urban expansion as organic processes and pushed city design to an unprecedented scale Metabolists visionary schemes of the city gave birth to revolutionary design paradigms which reinvented the discourse of modern Japanese architecture and propelled it through the years of Economic Miracle to a global prominence Their utopian concepts which often envisaged the sea and the sky as human habitats of the future reflected fundamental issues of cultural transformation and addressed environmental crises of the postindustrial society This new edition expands Zhongjie Lin s pathbreaking account on Tange and Metabolism centered at the intersection of urbanism and utopianism The thorough historical survey from Metabolism s inauguration at the 1960 World Design Conference to the apex of the movement at Expo 70 and further to the recent demolition of Nakagin Capsule Tower leads to a definition of three Metabolist urban paradigms megastructure group form and ruins which continue to inspire experiments in architecture city design and conservation Kenz Tange and the Metabolist Movement is a key book for architectural and urban historians architects and all those interested in avant garde design Japanese architecture and contemporary urbanism *Dream Cities* Wade Graham,2016-05-15 The ideas that became the blueprints for the world we live in **New Media, Old Media** Wendy Hui Kyong Chun,Thomas Keenan,2006 In this history of new media technologies leading media and cultural theorists examine new media against the background of traditional media such as film photography and print in order to evaluate the multiple claims made about the benefits and freedom of digital media *Le Corbusier, the Dishonest Architect* Malcolm Millais,2018-01-23 This is not a book for architects but for all those that have suffered consciously and unconsciously from modern architecture and have wondered how it came about This was largely due to one man an architect called Le Corbusier For some he was a genius but the truth is he was a sham a fake a charlatan whose only gift was for self publicity He was the most influential architect of the second half of the twentieth century his influence overwhelmed the architectural profession on a global scale who swallowed his publicity whole and still hold him in awe For the rest of the world the mere mortals his influence was disastrous as traditional buildings were destroyed and replaced by featureless boxes of varying sizes imposing a dreariness hitherto unimagined As usual it was the poor who suffered most as they were herded into tower blocks These were often grouped into estates that ringed many towns and cities which then degenerated into high rise slums with all the well known attendant social problems This book exposes the

myths that surround Le Corbusier detailing the endless failures of his proposals and his projects These were due to his profound dishonesty both as a person and as an architect His legacy was an architectural profession that believed and still believe they were designing buildings based on logic functionality and honesty whereas they were doing the opposite

Embodied Utopias Amy Bingaman,Lise Sanders,Rebecca Zorach,2003-12-16 Utopia has become a dirty word in recent scholarship on modernism architecture urban planning and gender studies Many utopian designs now appear impractical manifesting an arrogant disregard for the lived experiences of the ordinary inhabitants who make daily use of global public and private spaces The essays in Embodied Utopias argue that the gendered body is the crux of the hopes and disappointments of modern urban and suburban utopias of the Americas Europe and Asia They reassess utopian projects masculinist feminist colonialist progressive of the late nineteenth and early twentieth centuries they survey the dystopian landscapes of the present and they gesture at the potential for an embodied approach to the urban future to the changing spaces of cities and virtual landscapes

Le Corbusier's Venice Hospital Project Mahnaz Shah, 2017-05-15 While Le Corbusier's urban projects are generally considered confrontational in their relationship to the traditional urban fabric his proposal for the Venice hospital project remained an exercise in preserving the medieval fabric of the city of Venice through a systemic replication of its urban tissue This book offers a

detailed study of Le Corbusier's Venice hospital project as a plausible built entity. In addition, it analyses it in the light of its supposed affinity with the medieval urban configuration of the city of Venice. No formal attempt to date has been made to critically analyse the hospital project's design considerations in comparison to the medieval urban configuration of the city of Venice. Using a range of methodologies including those from architectural theory and history, using archival resources on site analysis and interviews with important resource persons, this book is an interpretation of the conceptual basis for Le Corbusier's understanding of the structural formulation of the city of Venice as mentioned in *The Radiant City* 1935. In doing so, it deciphers the diagrammatic analysis of the city structure found in this work into a set of coherent design modules that were applied in the hospital project and that could become a point of further investigation. Architects and other architecturally interested laypeople with an interest in Venice will find the book a valuable addition to their knowledge. For architectural historians, the book makes an important link between modernism and the historically grown Venice. **Basics**

Urban Building Blocks Thorsten Bürklin, Michael Peterek, 2017-05-22 Our cities and neighborhoods are composed of urban building blocks, and a knowledge of these elementary components is part of the basic equipment of city planning. It is absolutely essential for urban design that one understands their form and structure, their functional conditions, and the differentiation into private and public spheres, as well as the ways they are networked into their surroundings. Study of these city building blocks represents a first step toward understanding and successfully developing the built structure of the city as a physical and social habitat. Themes are the row, the block, the courtyard, the block in reverse, the passageway, the line, the solitaire, the group, the shed. *Big House Little City* Benedict Zucchi, 2023-09-08 Shortlisted for the Architectural Book Awards 2024. Combining architectural and urban thinking in an unusual and engaging way, this book presents an integrated approach to architectural theory and design. Leon Battista Alberti's assertion in his famous Renaissance treatise that the city is like a big house and the house is in turn like a little city forms the springboard for a series of reflections on architecture's relationship with urbanism and how their once intimate symbiosis unravelled by International Style Modernism can be recovered. Explicit references to Alberti's house-city phrase have been made by figures as diverse as the architects Louis Kahn, Aldo Van Eyck, Denys Lasdun, and Niels Torp, and novelist Italo Calvino. But as the book shows, thinking of buildings as little cities provides a new lens through which to reappraise the contributions of many other architects, including Le Corbusier, Frank Lloyd Wright, Alvar Aalto, Eliel Saarinen, Bernard Rudofsky, Hans Scharoun, Leon Krier, Fumihiko Maki, Charles Correa, and Team 10. In doing so, the author identifies common themes that form an unexpected bridgehead between the urban and architectural approaches of Antiquity, the Middle Ages, Renaissance, and 20th century. The book explores buildings from across the globe, including lesser-known projects such as Wright's unbuilt house in Italy or Saarinen's master plan for Cranbrook Academy, as well as more recent projects by Niels Torp Behnisch Architekten, Sou Fujimoto, Peter Barber, and WOHA. It concludes with practical case studies of residential, health, education, and workplace projects from different

countries fulsomely illustrated with many drawings and photographs These show how architectural design viewed through an urban lens provides a conceptual framework for breaking down the scale of large buildings and integrating them with their context And crucially these also show a very accessible way of explaining evolving designs to the intended users and eliciting their participation in the design process The book offers a compelling approach to the design of projects at all scales within an ecological perspective the sense that big and small cities and buildings must be approached holistically if we are to reverse the degradation and depletion of our habitat both natural and man made
