Microvascular Anastomoses For Cerebral Ischemia:

Microvascular Anastomoses for Cerebral Ischemia J.M. Fein, O.H. Reichman, 2012-12-06 **Microvascular Anastomoses for Cerebral Ischemia** Jack M. Fein, 1978 **Microsurgery for Cerebral Ischemia** S.J. Peerless, C.W. McCormick, 2012-12-06 In June 1973 Professor George Austin invited a small group of neuroscientists from Asia Europe the United States and Canada to the Loma Linda University School of Medicine in Loma Linda California The fundamental technique of fashioning a small vessel collateral to the brain had been pioneered by Donaghy and Yasargil 5 years before and was now gaining momentum with the increased availability of the operating microscope fine instruments and sutures and surgeons trained in microvascular surgery The interchange of ideas at this first conference was magic The handful of participants returned home stimulated with new ideas of technique patient selection and postoperative evaluation and resolved to meet again on a regular basis A Second International Symposium was hosted by Howard Reichman at Loyola University in Chicago Illinois in June of 1974 a Third Symposium at Rottach Egern West Germany in June of 1976 under Professor F Marguth of the Ludwig Maximilians University of Munich **Extra-Intracranial Vascular Anastomoses Microsurgery at the Edge of the Tentorium** Hermann Dietz, Mario Brock, Margareta Klinger, 2012-12-06 This 13th volume of Advances in Neurosurgery presents those papers held at the 35th Annual Meeting of the German Society of Neurosurgery in Hannover June 13 16 1984 Of 150 papers submitted the program committee of the Society chose 69 for presentation I would like to thank Professors Bock Brock Jensen Wenker and Willenweber for their assistance in the selection It was the intention of the President of the Congress at this meeting to lay special scientific emphasis on discussion For this reason the number of papers had to be limited even more than usual in order to give all participants the opportunity for questions and the presentation of their own experience The main topic of the first day was Extra Intracranial Anastomoses Here the operative experience and the long term results of these operations in the German speaking countries were reviewed This discussion was preceded a day earlier by a satellite symposium on the possibilities of the prophylaxis and treatment of ischemic neurological deficits following subarachnoid hemorrhage by means of calcium antagonists Microsurgery at the Edge of the Tentorium was the second main topic In cooperation with the Society's microneurosurgery working group only a small number of lectures were planned but the topic was covered thoroughly in a round table discussion **The Extra-Intracranial Bypass Operation for Prevention and Treatment of Stroke** G. Kletter, 2013-11-11 A decade has passed since systematic studies were initiated in the USA in an attempt at establishing the experimental basis for a surgical technique which was to prove an effective tool in combatting one of the most common diseases i.e. cerebrovascular accidents The development of such intricate vasculosurgical techniques as are required for extra intracranial arterial bypass operations would not have been possible without the aid of the surgical microscope which had been designed some years earlier In the past few years increasing emphasis has been placed on establishing clear cut indications for the bypass operation because

satisfactory long term results are unlikely to be obtained without them Needless to say that this requires a close cooperation of the neurosurgeon with a team composed of neurologists internists radiologists and pathologists Fortunately enough cooperation between the services of the University of Vienna Medical School proved to be exemplary While there has been no lack of efforts by major medical centers both in Europe and the overseas countries to perfect bypass operations for cerebrovascular accidents a comprehensive monograph reviewing all medical and operative problems involved in microvascular surgery for strokes was badly missed by many

Hemodynamic Aspects of Cerebral Angiomas

Werner Hassler, 2012-12-06 Up to date the treatment of arteriovenous racemose angiomas of the brain remains unsatisfactory Intraoperative hemorrhages post embolizational or postoperative deficits depending on the site and size of the A VM as well as inoperability of rare angioma types have promoted the technical improvement of diagnostic and therapeutic approaches Nevertheless some pathophysiological problems of A VM hemodynamics have not been solved Many angiographical studies observations during embolization and operation dopplersonographical and other perfusion measurements provided some insight Sufficient animal models have yet to be developed in order to elucidate the pathophysiological mechanisms This monograph describes A V fistula models in cats and rats both conventional and newly developed which allow a better comparison with human cerebral angiomas than previous ones The most important result is that the model of the breakthrough of arterial pressure waves into the capillaries following a failure of cerebrovascular regulation cannot be confirmed Rather according to the findings in precapillary vessels presented here the regulation functions normally so that a breakdown of regulation cannot be responsible for global brain edema often seen after removal of angiomas The regulation was demonstrated using different methods most important of which being the CO response of 2 brain vessels to varying CO contents of the inhaled air Angiographical dopplersonographical and 2 perioperative dopplersonographical as well as intraoperative measurements of flow and pressure have been applied Microsurgical Approach to Cerebro-Spinal Lesions H. Krayenbühl, P. E. Maspe, W. H. Sweet, 1978-12-12 *Intraoperative Doppler Sonography in Neurosurgery* J.M. Gilsbach, 2013-06-29 This book is written by an author whose knowledge of the subject is based on vast surgical experience A reliable assessment of the success or failure of a micro vascular anastomosis or an aneurysm operation has until now been possible only postoperatively by angiography and transcutaneous Doppler sonography Of particular importance are the stenoses and occlusions which can occur during the operation but which are frequently not detected until after surgery This induced the neurosurgeons in Freiburg as well as those in several other hospitals to carry out a routine control with postoperative transcutaneous Doppler following extracranial intracranial bypass operations and angiography while still under anesthesia following aneurysm operations The stenoses and occlusions detected were often not apparent intraoperatively The reasons for this are that from the outside we see only the surface and not the lumen of a vessel and that stenoses caused by thrombosis indentation of the vessel wall during anastomosis or by plaque on the vessel wall are not externally obvious Even arterial pulsation is no guarantee of patency The necessity to be able to detect stenoses during the operation is obvious The microvascular Doppler sonography adopted by Dr Gilsbach provides an expedient and safe method of recognizing such lumen narrowings **Stroke E-Book** J. P. Mohr, Philip A. Wolf, Michael A. Acute Non-Traumatic Intracranial Bleedings. Posterior Fossa Tumors in Infancy H.-P. Jensen,Mario Brock,M.

Klinger,2013-04-17 This volume of ADVANCES IN NEUROSURGERY presents the original texts of 60 papers delivered at the 33rd annual meeting of the German Neuro surgical Society held in Kiel from May 16th to 20th 1982 These papers represent a selection from some 162 papers submitted and 96 actually given The selection was made by the society s programme committee of which Professor W J BOCK Professor H DIETZ and Professor W GROTE are also members I would like to take this opportunity to express my sincere thanks to them for their untiring cooperation The scientific programme dealt with three main themes 1 Acute non traumatic intracranial hemorrhages a subject that has always been of importance for neurological surgeons since the anatomist Giovanni Battista MORGAGNI in 1791 first described in detail the clinical picture and the pathological and anatomical causes of a brain hemorrhage he had observed in his servant Indeed at our 31st annual meeting in Erlangen in 1980 Timing Problems in Sub arachnoid Hemorrhages was one of the main topics of discussion For this year s meeting a cooperative study in which 27 university and hospital departments of neurosurgery participated enabled us to look into the causes and the diagnostic and therapeutic measures involved in a great number of cases of intracranial hemorrhage *Neurosurgical Applications of Transcranial Doppler Sonography* A. Harders,2012-12-06 In 1981 the Norwegian physiologist and cyberneticist Rune Aaslid developed a device which made it possible to apply the transcranial Doppler sonographic technique in man In 1983 Dr Albrecht Harders took on the project of working out a clinically practicable method that would allow atraumatic measurements to be made of the blood flow velocity in the large branches of the circle of Willis The technique has now become a competitor of the conventional methods of measuring the intracranial hemodynamics including angiography and the xenon method of cerebral blood flow measurement Harders proceeded from the assumption that the measurement of the blood flow velocity is more relevant for clinical diagnoses than the usual volume flow measurements He stresses the very valuable application of the technique in detecting cerebral vasospasm before and after aneurysm surgery The changes in the blood flow velocities measured by transcranial Doppler

sonography in the individual vessel segments of the circle of Willis are interpreted with respect to the various factors that can effect such changes collateral circulation in the circle of Willis diameter of the vessel vascular resistance the general cardiovascular situation arterial partial CO pressure autoregulatory factors position of body The rate of 2 complications associated with angiography has thus been reduced since the best time both for angiography and for surgery can be determined and continuous TCD examinations show when the patient is out of a critical phase of cerebral vasospasm

Modern Neurosurgery 1 Mario Brock, 2013-04-17 More than 800 papers were presented by neurosurgeons from 66 countries during the 7th International Congress of Neurological Surgery held in Munich on 12-18 July 1981 With the present scope and problems of neurosurgery as its theme the congress achieved its aims in making possible the exchange and dissemination of new knowledge and ideas and in facilitating personal contact between neurosurgeons from all parts of the world Of such importance are the regional differences within our branch of science that we should spare no effort in acquainting ourselves with those neurosurgical problems which lie beyond the boundaries of our local horizons From the vast number of papers the editor has selected those whose high scientific standard merits greater exposure than that given by the conference itself I should like to thank the editor for his work and Springer Verlag for their involvement in our discipline It is to be hoped that this book will find a worldwide audience in accordance with the intentions of the World Federation of Neurosurgical Societies Prof Dr K A Bushe President of the Congress v Editor's Preface This is the first volume of a new series which aims to provide an overview of the state of the art of neurosurgery every four years It will contain papers covering various fields of our specialty selected from among those presented at each International Congress of Neurological Surgery **Stroke Syndromes, 3ed** Louis R. Caplan, Jan Gijn, 2012-07-12 A comprehensive survey of dysfunction due to stroke this revised edition remains the definitive guide to stroke patterns and syndromes
