Modeling In Materials Processing:

Modeling in Materials Processing Jonathan A. Dantzig, Charles L. Tucker, 2001-11-12 Mathematical modeling and computer simulation are useful tools for improving materials processing While courses in materials processing have covered modeling they have traditionally been devoted to one particular class of materials that is polymers metals or ceramics This text offers a different approach presenting an integrated treatment of metallic and non metallic materials The authors show that a common base of knowledge specifically the fundamentals of heat transfer and fluid mechanics provides a unifying theme for these seemingly disparate areas Emphasis is placed on understanding basic physical phenomena and knowing how to include them in a model The book also treats selected numerical methods showing the relationship between the physical system analytical solution and the numerical scheme A wealth of practical realistic examples are provided as well as homework exercises Students and practising engineers who must deal with a wide variety of materials and processing problems will benefit from the unified treatment presented in this book

Mathematical and Physical Modeling of Materials Processing Operations Olusegun Johnso Ilegbusi, Manabu Iguchi, Walter E. Wahnsiedler, 1999-07-29 The past few decades have brought significant advances in the computational methods and in the experimental techniques used to study transport phenomena in materials processing operations However the advances have been made independently and with competition between the two approaches Mathematical models are easier and less costly to implement but experiments are essential for verifying theoretical models In Mathematical and Physical Modeling of Materials Processing Operations the authors bridge the gap between mathematical modelers and experimentalists They combine mathematical and physical modeling principles for materials processing operations simulation and use numerous examples to compare theoretical and experimental results The modeling of transport processes is multi disciplinary involving concepts and principles not all of which can be associated with just one field of study Therefore the authors have taken care to ensure that the text is self sustaining through the variety and breadth of topics covered Beyond the usual topics associated with transport phenomena the authors also include detailed discussion of numerical methods and implementation of process models software and hardware selection and application and representation of auxiliary relationships including turbulence modeling chemical kinetics magnetohydrodynamics and multi phase flow They also provide several correlations for representing the boundary conditions of fluid flow heat transfer and mass transfer phenomena Mathematical and Physical Modeling of Materials Processing Operations is ideal for introducing these tools to materials engineers and researchers Although the book emphasizes materials some of the topics will prove interesting and useful to researchers in other fields of chemical and mechanical engineering

Modeling in Materials Processing Jonathan A. Dantzig, Charles L. Tucker, 2001-11-12 Mathematical modeling and computer simulation are useful tools for improving materials processing While courses in materials processing have covered modeling they have been devoted to one particular class of materials polymers metals or

ceramics This text offers a new approach presenting an integrated treatment of metallic and non metallic materials The authors show that a common base of knowledge specifically the fundamentals of heat transfer and fluid mechanics unifies these seemingly disparate areas They emphasize understanding basic physical phenomena and knowing how to include them in a model The book also includes selected numerical methods a wealth of practical realistic examples and homework exercises

Modelling of Materials Processing Gregory C. Stangle, 2013-11-27 This is a book about mathematical modelling It focuses on the modelling of the preparation of materials Materials are important of course in an economic sense the goods of goods and services are made of materials This provides a strong incentive to produce good materials and to improve existing materials Mathematical modelling can help in this regard Without a doubt modelling a materials processing operation is not strictly necessary Materials synthesis and fabrication processes certainly existed before the invention of mathematics and computers and well before the combined use of mathematics and computers Modelling can however be of assistance if done properly and if used properly The mathematical modelling described in this book is at its root a rather formal structured way of thinking about materials synthesis and fabrication processes It requires looking at a process as a whole It requires considering everything that is or might be important It requires translating the details of a given physical process into one or more mathematical equations It requires knowing how to simplify the equations without over simplifying them
