## **Precambrian Crustal Evolution Of China:**

*Precambrian Crustal Evolution of China* Jin Bai, 1998-08-20 Precambrian Crustal Evolution of China integrates the theory of plate tectonics structural geology and petrology to identify the tectonic and metamorphic environment in different stages of development of the Archaean and Proterozoic crust Further the evolution of the Precambrian atmosphere and hydrosphere is approached by using geochemical data and traces of life For the first time the results of the study of the Precambrian geology of China are made available in English to scientists and students not having access to the huge amount of Chinese literature

**Evolution of Archean Crust and Early Life** Yildirim Dilek, Harald Furnes, 2013-11-26 This book presents an integrated approach to the study of the evolution of the Archean lithosphere biosphere and atmosphere and as such it is a unique contribution to our understanding of the early Earth and life The structural and geochemical make up of both the oceanic and

continental crust of the Archean Earth is documented in some case studies of various cratons and the implications of the Phanerozoic plate and plume tectonic processes for the Archean geology are discussed in several chapters in the book All chapters are process oriented and data rich and reflect the most recent knowledge and information on the Archean Earth The interdisciplinary approach of examining the evolution of the Archean crust oceans and life that we adopt in this book sets it apart from previous publications on Precambrian geology The book will be attractive to researchers in academia and in industry and to senior undergraduate students graduate students and faculty in earth and natural sciences

*Main Tectonic Events and Metallogeny of the North China Craton* Mingguo Zhai, Yue Zhao, Taiping Zhao, 2016-07-25 This book focuses on the metallogeny and main tectonic events of the North China Craton from early Precambrian to Phanerozoic It covers the Archean crustal growth Paleoproterozoic rifting subduction collision processes Great Oxidation Event Meso Neoproterozoic multiple rifting Phanerozoic reworking of the North China Craton as well as metallogeny related to above different processes The North China Craton is one of the oldest cratons in the world It has experienced a complex geological evolution since the early Precambrian and carries important records of secular changes in tectonics and metallogeny It provides a systematic review and new results on the growth and evolution of the North China Craton and metallogeny It will be of broad interest to the earth scientists working in the fields of economic geology geochemistry and tectonics of the North China Craton and eastern Asian

Archean Crustal Evolution K.C. Condie, 1994-11-11 The integration of Tectonics Geochemistry up to date reviews by leading scientists as well as a broad topical coverage of the Archean are some of the features of this particular volume As geochronology has progressed in the last 20 years the Archean has continued to attract interest Advancements in the understanding of Archean crustal and mantle evolution have progressed rapidly since the first International Archean Symposium in Western Australia 1970 The landmark for the Archean was the NATO Advanced Study Institute at Leicester 1975 At this meeting the Archean truly came of age Investigators from many different disciplines focused their expertise on the early history of the earth For the first time the nature of the atmosphere oceans and life during the Archean was an important part of an Archean symposium During the most recent Archean Symposium in Perth in 1990 there was a shift in interest from field and trace element data to the new rapidly evolving high precision U Pb geochronology of Archean rocks and to detailed structural studies of both low and high grade Archean terrains The terrane concept so widely applied to the Phanerozoic was proposed for the Archean Yilgarn Province in Western Australia and is now widely accepted for the Archean as evident by the articles in this book Plate tectonics is now widely accepted as the principal process that controls the history of continents and oceans There are though well substantiated differences between Archean and post Archean rocks that indicate that Archean tectonic regimes must have differed in some respects from modern ones The question of how and to what degree did Archean plate tectonics differ from modern plate tectonics is treated in many of the chapters of this book Altogether the editor has presented a selection of articles that provide a fascinating insight into the latest observations in this
