Precis Of The Lectures On Architecture With Graphic Portion Of The Lectures On Architecture:

Précis of the Lectures on Architecture Jean-Nicolas-Louis Durand, 2000-01-01 Jean Nicolas Louis Durand 1760 1834 regarded the Précis of the Lectures on Architecture 1802 5 and its companion volume the Graphic Portion 1821 as both a basic course for future civil engineers and a treatise Focusing the practice of architecture on utilitarian and economic values he assailed the rationale behind classical architectural training beauty proportionality and symbolism His formal systematization of plans elevations and sections transformed architectural design into a selective modular typology in which symmetry and simple geometrical forms prevailed His emphasis on pragmatic values to the exclusion of metaphysical concerns represented architecture as a closed system that subjected its own formal language to logical processes Now published in English for the first time the Précis and the Graphic Portion are classics of architectural education

Ornament Antoine Picon, 2014-05-29 Once condemned by Modernism and compared to a crime by Adolf Loos ornament has made a spectacular return in contemporary architecture This is typified by the works of well known architects such as Herzog de Meuron Sauerbruch Hutton Farshid Moussavi Architecture and OMA There is no doubt that these new ornamental tendencies are inseparable from innovations in computer technology The proliferation of developments in design software has enabled architects to experiment afresh with texture colour pattern and topology Though inextricably linked with digital tools and culture Antoine Picon argues that some significant traits in ornament persist from earlier Western architectural traditions These he defines as the subjective the human interaction that ornament requires in both its production and its reception and the political Contrary to the message conveyed by the founding fathers of modern architecture traditional ornament was not meant only for pleasure It conveyed vital information about the designation of buildings as well as about the rank of their owners As such it participated in the expression of social values hierarchies and order By bringing previous traditions in ornament under scrutiny Picon makes us question the political issues at stake in today s ornamental revival What does it tell us about present day culture Why are we presently so fearful of meaning in architecture Could it be that by steering so vehemently away from symbolism contemporary architecture is evading any explicit contribution to collective values

The Evolution of Urban Form Brenda Case Scheer, 2017-10-20 Why are so many of our urban environments so resistant to change The author tackles this question in her comprehensive guide for planners designers and students concerned with how cities take shape This book provides a fundamental understanding of how physical environments are created changed and transformed through ordinary processes over time Most of the built environment adheres to a few physical patterns or types that occur over and over Planners and architects consciously and unconsciously refer to building types as they work through urban design problems and regulations Suitable for professional planners architects urban designers and students This book includes practical examples of how typology is critical to analytical design and regulatory situations

German Façade Design Randall Ott, 2016-09-17 German architecture prior to the modern period has received less systemic analytical study than that of Italy France and Britain Scholarly discussion of broad traditions or continuities within Germanic or Central European facade design is even sparser Baroque era studies of the region mostly devote themselves to isolated architects monuments or movements Modernism's advent decisively changed this Germanic architecture enjoyed sudden ascendancy Yet even so study specifically of that region's facades still lagged nothing compares to the dozens of treatments of Le Corbusier's facade systems for example and how these juxtapose with French neoclassical or Italian Renaissance methods Given the paucity of multi period studies one can be forgiven for believing Germany's effervescence of radical modern works seems unprecedented This book takes up these multiple quandaries It identifies and documents a previously unrecognized compositional tradition characterized here as the screen facade and posits it as a counter narrative critiquing the essentialist authentic canon currently dominant in Western architectural history By crossing evenly over the dividing line between the historical and modern periods it offers valuable insights on indigenous roots underlying some aspects of Germany's invigorating early twentieth century architectural developments The book chronologically examines 400 years of closely related facades concentrated in Germany but also found in Austria the Czech Republic German speaking Switzerland and nearby areas of Central Europe While nearly 75 buildings are mentioned and illustrated a dozen are given extensive analysis and the book focuses on the works of three architects Schinkel Behrens and Mies Relationships between examples of these three architects facades far transcend mere homage amongst masters Glimmers of the system they eventually codify are apparent as early as at Heidelberg Castle in 1559 and Nürnberg's Rathaus in 1622 The book argues that in Germany northern Gothic affinities for bisection intense repetition and rote aggregation intersected with southern Classical affinities for symmetry hierarchy and centrality thereby spawning a unique hybrid product the screen Instead of graphic formality this study is guided by on site perceptions propositional contrasts means of approach interpretive conflicts and emotion and it relates the design of these facades to concepts proposed by contemporary philosophers including Novalis Hegel Nietzsche Freud Adorno and most importantly Gadamer on hermeneutics

Revealing Architectural Design Philip D. Plowright, 2014-01-10 *Revealing Architectural Design* examines the architectural design process from the point of view of knowledge domains domain syntax coherence framing thinking styles decision making and testing Using straightforward language the book connects general design thinking to

underlying frameworks that are used in the architectural design process The book provides historical grounding as well as clear examples of real design outcomes It includes diagrams and explanations to make that content accessible The frameworks and their methods are described by what they can accomplish what biases they introduce and the use of their final outcomes Revealing Architectural Design is an advanced primer useful to anyone interested in increasing the quality of their architectural design proposals through understanding the conceptual tools used to achieve that process While it is intended for undergraduate and graduate students of architectural design it will also be useful for experienced architectural practitioners For the non architect this book opens a window into the priorities of a discipline seldom presented with such transparency

Architectural Design and Regulation Rob Imrie, Emma Street, 2011-01-21 From the earliest periods of architecture and building architects actions have been conditioned by rules regulations standards and governance practices These range from socio cultural and religious codes seeking to influence the formal structure of settlement patterns to prescriptive building regulations specifying detailed elements of design in relation to the safety of building structures In Architectural Design and Regulation the authors argue that the rule and regulatory basis of architecture is part of a broader field of socio institutional and political interventions in the design and development process that serve to delimit and define the scope of the activities of architects The book explores how the practices of architects are embedded in complex systems of rules and regulations The authors develop the understanding that the rules and regulations of building form and performance ought not to be counterpoised as external to creative processes and practices but as integral to the creation of well designed places The contribution of Architectural Design and Regulation is to show that far from the rule and regulatory basis of architecture undermining the capacities of architects to design they are the basis for new and challenging activities that open up possibilities for reinventing the actions of architects

Architectural Intelligence Molly Wright Steenson, 2022-11-01 Architects who engaged with cybernetics artificial intelligence and other technologies poured the foundation for digital interactivity In Architectural Intelligence Molly Wright Steenson explores the work of four architects in the 1960s and 1970s who incorporated elements of interactivity into their work Christopher Alexander Richard Saul Wurman Cedric Price and Nicholas Negroponte and the MIT Architecture Machine Group all incorporated technologies including cybernetics and artificial intelligence into their work and influenced digital design practices from the late 1980s to the present day Alexander long before his famous 1977 book A Pattern Language used computation and structure to visualize design problems Wurman popularized the notion of information architecture Price designed some of the first intelligent buildings and Negroponte experimented with the ways people experience artificial intelligence even at architectural scale Steenson investigates how these architects pushed the boundaries of architecture and how their technological experiments pushed the boundaries of technology What did computational cybernetic and artificial intelligence researchers have to gain by engaging with architects and architectural problems And what was this new space that emerged within these collaborations At times Steenson writes the architects in this book characterized themselves as

anti architects and their work as anti architecture The projects Steenson examines mostly did not result in constructed buildings but rather in design processes and tools computer programs interfaces digital environments Alexander Wurman Price and Negroponte laid the foundation for many of our contemporary interactive practices from information architecture to interaction design from machine learning to smart cities Art of the Defeat Laurence Bertrand Dorléac, 2008 Art of the Defeat offers an unflinching look at the pivotal role art played in France during the German occupation It begins with Adolf Hitler's staging of the armistice at Rethondes and moves across the dark years analyzing the official junket by French artists to Germany the exhibition of Arno Breker's colossi in Paris the looting of the state museums and Jewish collections the glorification of Philippe Pétain and a pure national identity the demonization of modernists and foreigners and the range of responses by artists and artisans The sum is a pioneering exposé of the deployment of art and ideology to hold the heart of darkness at bay Page 4 of cover

Digital Records, Heritage Conservation and Post-earthquake Re-construction in Chile Bernadette Devilat L., 2025-05-30 The conservation of built heritage implies constant intervention One form of intervention is reconstruction which in the context of disasters usually tries to bring buildings and places back to their previous state and is contested in heritage discourses This book challenges reconstruction as a replica to physically preserve damaged built heritage by critically examining a context of constant change resulting from earthquakes Chile advocating for the digital record to be an analytical basis for design following the principles embedded in historical domestic architecture Beyond monumental heritage the focus is on the living heritage of the historical settlements of Tarapacá, Ziguazu and Lolol built with local resources and sustainable techniques The book proposes reconstruction as an alternative methodology based on 3D laser scanning photography and questionnaires to analyse the as built condition of earthquake affected buildings consider risk mitigation and recognise adaptation to earthquakes and subsequent reconstructions This is relevant for seismic prone areas and built heritage at risk in general This book is aimed at researchers academics and practitioners in architectural conservation and is also a valuable resource for authorities and stakeholders involved in post earthquake scenarios
