Precision Agriculture John V. Lake, Gregory R. Bock, Jamie A. Goode, 2008-04-30 This book investigates new agricultural systems such as organic and green manuring as well as integrated pest management practices and looks at how they can improve farm productivity against the enhancements for the environment Much of the information presented focuses on microinvestigation of the soil and on the effects of soil variability within fields on yields and nutrient flows **Precision Agriculture for Sustainability and Environmental Protection** Margaret Oliver, Thomas Bishop, Ben Marchant, 2013-11-20 Precision agriculture PA involves the application of technologies and agronomic principles to manage spatial and temporal variation associated with all aspects of agricultural production in order to improve crop performance and environmental quality The focus of this book is to introduce a non specialist audience to the the role of PA in food security environmental protection and sustainable use of natural resources as well as its economic benefits The technologies covered include yield monitors and remote sensing and the key agronomic principles addressed are the optimal delivery of fertilizers water and pesticides to crops only when and where these are required As a result it is shown that both food production and resource efficiency can be maximized without waste or damage to the environment such as can occur from excessive fertilizer or pesticide applications The authors of necessity describe some technicalities about PA but the overall aim is to introduce readers who are unfamiliar with PA to this very broad subject and to demonstrate the potential impact of PA on the environment and economy Chapter 3 of this book is freely available as a downloadable Open Access PDF at [http www taylorfrancis com](http://www.taylorfrancis.com) under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 3 0 license

Tools for Land Use Analysis on Different Scales Bas Bouman, 2013-12-19 This book reflects the results of more than ten years of cooperative research involving Wageningen Agricultural University y l AU in the Netherlands the Tropical Agricultural Research and Higher Education Center CATIE Centro Agronómico Tropical de Investigación y Enseñanza in Costa Rica and the Costa Rican Ministry of Agriculture and Livestock MAG Ministerio de Agricultura y Ganadería as part of the Research Program on Sustainability in Agriculture REPOSA in the Central American country The type of cooperation was unusual as it focused on both research and the education of students undertaking either M Sc thesis projects or a program of practical training in the various aspects of studying land use Since funding was provided by W AU a high degree of scientific autonomy was created that has clearly benefited the independent scientific rigor of the work Over the ten year period the program has changed from being a patchwork of various insulated specialist projects into a truly interdisciplinary effort leading to the development of innovative tools for analyzing land use on a number of geographical scales These tools are presented in this book Besides CATIE and MAG cooperation with other Costa Rican partner institutions has been essential from the beginning and this process of interaction has also evolved considerably over time

Geospatial Technologies for Crops and Soils Tarik Mitran, Ram Swaroop Meena, Abhishek Chakraborty, 2020-10-24 The sustainable development of the agriculture sector is the only option to meet the demands of increased and economically viable production in a changing climate This means there is a need to introduce the latest technologies to enhance production and also help policymakers make decisions for the future Geospatial technologies tools such as remote sensing geographical information systems GIS global positioning systems GPS and mobile web applications provide unique capabilities to analyze multi scale multi temporal datasets and support decision making in sustainable agriculture development and natural resources management Further the availability of reliable and timely geospatial information on

natural resources and environmental conditions is essential for sustainable agricultural development and food security. Since remote sensing solutions are fast, non-destructive and have large spatial coverage, they can play a significant role in the identification, inventory and mapping of land resources. Over the past four decades, remote sensing has proved to be a cost-effective and powerful tool to assess crop and soil properties in varying spatial and temporal scales using both visual and digital techniques. Satellite remote sensing coupled with GIS mobile app-based positional information has emerged as an efficient tool for optimizing input resources and minimizing cost of production and risk of biotic/abiotic factors, nature to promote sustainable agriculture. This book comprehensively documents the applications of space-based technologies for crop and soil assessments for the sustainable development of agriculture. Plant Sciences Reviews 2012 David Hemming, 2013. Plant Sciences Reviews 2012 provides scientists and students with analysis on key topics in current research including plant diseases, genetics, climate impacts, biofuels and postharvest. Experts such as Frances Seymour, Roger Jones, Paul Christou and Errol Hewitt provide incisive reviews of their fields. Originally published online in CAB Reviews, this volume makes available in printed form the reviews in plant science published during 2012.
