**The Precision Revolution** Michael Russell Rip, James M. Hasik, 2002 Ever since so called smart bombs debuted in the Vietnam War precision weapons have been an expected part of modern warfare While most Americans are aware of the use of these technological wonders frequently viewing images of pinpoint accuracy on their television screens few understand how the weapons work In this very readable explanation Michael Rip and James Hasik not only clarify the complex technology but chronicle the use of these modern marvels and elaborate on the promises and the pitfalls behind them At the root of today s precision weapons is the Global Positioning System GPS the same system used by professional marine and aerial navigators and even by modern hikers drivers of upscale automobiles and sailboat owners The authors remove much of the mystery of this satellite based system explaining how it has revolutionized the art and science of navigation and overturned many of the solutions to the age old problems of targeting Relevant examples taken from today s headlines demonstrate both the capabilities and the limitations of these weapons Their use in Bosnia Kosovo and the stand off engagements in the no fly zones of Iraq make a great deal more sense with this book in hand Many of the emerging debates spawned by a mandated review of U S defense policy are clarified From the details of the weapons systems and their employment to their political implications this sweeping analysis of the effects of a revolutionary technology on military operations and strategy is without parallel A wealth of illustrations help the reader understand how technologies work and fit together how they are practically used and what they mean for the future

Mahnken, 2010-06-24 No nation in recent history has placed greater emphasis on the role of technology in planning and waging war than the United States In World War II the wholesale mobilization of American science and technology culminated in the detonation of the atomic bomb Competition with the Soviet Union during the Cold War combined with the U S Navy s culture of distributed command and the rapid growth of information technology spawned the concept of network

Lieber, Daryl G. Press, 2020-06-15 Leading analysts have predicted for decades that nuclear weapons would help pacify international politics The core notion is that countries protected by these fearsome weapons can stop competing so intensely with their adversaries they can end their arms races scale back their alliances and stop jockeying for strategic territory But rarely have theory and practice been so opposed Why do international relations in the nuclear age remain so competitive Indeed why are today's major geopolitical rivalries intensifying In The Myth of the Nuclear Revolution Keir A Lieber and Daryl G Press tackle the central puzzle of the nuclear age the persistence of intense geopolitical competition in the shadow of nuclear weapons They explain why the Cold War superpowers raced so feverishly against each other why the creation of mutual assured destruction does not ensure peace and why the rapid technological changes of the

21st century will weaken deterrence in critical hotspots around the world By explaining how the nuclear revolution falls short Lieber and Press discover answers to the most pressing questions about deterrence in the coming decades how much capability is required for a reliable nuclear deterrent how conventional conflicts may become nuclear wars and how great care is required now to prevent new technology from ushering in an age of nuclear instability **The U.S.-China Military Scorecard** Eric Heginbotham, Michael Nixon, Forrest E. Morgan, 2015-09-14 A RAND study analyzed trends in the development of Chinese and U S military capabilities in two scenarios centered on Taiwan and the Spratly Islands and multiple types of operations from 1996 to 2017 *Death by Moderation* David A. Koplow, 2010 This book addresses an important but little noticed phenomenon in the revolutionary world of military technology Across a wide range of otherwise unrelated weapons programs the Pentagon is now pursuing arms that are deliberately crafted to be less powerful less deadly and less destructive than the systems they are designed to supplement or replace This direction is historically anomalous military forces generally pursue ever bigger bangs but the modern conditions of counter insurgency warfare and military operations other than war such as peacekeeping and humanitarian assistance demand a military capable of modulated force By providing a capacity to intervene deftly yet effectively the new generations of useable weaponry should enable the U S military to accomplish its demanding missions in a manner consistent with legal obligations public relations realities and political constraints Five case studies are provided regarding precision guided smart bombs low yield nuclear weapons self neutralizing anti personnel land mines directed energy anti satellite weapons and non lethal weapons *Limiting Risk in America's Wars* Phillip S Meilinger, 2017-11-15 The United States has the most expensive and seemingly unstoppable military in the world Yet since World War II the nation's military success rate has been meager The Korean War was a draw while Vietnam Mogadishu Afghanistan and Iraq were clear losses Successes include Iraq in 1991 the Balkans Croatia and Kosovo Panama the initial takedowns of Afghanistan in 2001 and Iraq in 2003 and Libya What differentiates the failures from the successes Failures have been marked by the introduction of large numbers of conventional American ground troops while successes have been characterized by the use of airpower special operations forces robust intelligence and sensor platforms and the use of indigenous ground troops Phillip S Meilinger's new book advocates strategies that limit risks in war as well as achieve measurable goals Instead of large numbers of conventional ground troops the author argues in favor of a focus on asymmetric capabilities a combination of airpower special operation forces intelligence and indigenous ground troops to achieve the desired political outcomes **Harnessing the Heavens** Elwood L. White, 2006 **The Business of Martyrdom** Jeffrey W Lewis, 2012-04-15 The Business of Martyrdom is the only comprehensive history of suicide bombing from its origins in Imperial Russia to the present day It makes use of a framework from the history and philosophy of technology to explain the diffusion and evolution of suicide bombing over the past several decades It is primarily a work of synthesis meant to reach a broad audience and endeavors to integrate as much of the recent scholarly literature as possible

including reconciling explanatory mechanisms that seem to be at odds with one another In addition this book is able to draw on very recent changes in suicide bombing in the years 2008 2010 that allow it to have a slightly different perspective than earlier studies For the first time the global number of suicide attacks has declined significantly for three years in a row This book therefore has the advantage of addressing the phenomenon of suicide bombing as a bounded phenomenon with limits to its growth and diffusion To this point the impression that suicide bombers are the smartest bombs yet created has been widespread but confined to the area of metaphor Drawing well established ideas from the history of technology *The Business of Martyrdom* argues that the metaphor should be taken literally Suicide bombing is a technology that has been invented and re invented at different times in different areas but always for the same purpose resolving a mismatch in military capabilities between antagonists by utilizing the available cultural and human resources Over the past several years analysts have produced a large number of monographs and articles examining suicide bombing The best contributions in this new and growing literature have shed considerable light on the complexity of suicide bombing in practice particularly regarding the structure of the organizations that deploy suicide bombers and the relationships between these organizations and the recruits whom they utilize in their attacks Nevertheless nagging inconsistencies and questions remain These inconsistencies can be explained by examining suicide bombing as a technological system that integrates human beings cultures and devices and directs them toward specific ends Such an analysis requires that neither the individual bombers nor their sponsoring organizations be the basic unit of discussion Instead the bombers must be understood as components within a much larger system that has been shaped by a host of social cultural and operational constraints throughout its existence Integrating insights from the historical analysis of other technological systems with the recent literature specifically devoted to suicide bombing therefore allows *The Business of Martyrdom* to develop a fuller understanding of suicide bombing as a unified yet diverse phenomenon
