Biosynthesis, Modification, and Processing of Cellular and Viral Polyproteins Gebhard Koch, 2012-12-02

Biosynthesis Modification and Processing of Cellular and Viral Polyproteins presents the proceedings of the international conference held in Hamburg Blankenese on May 27 31 1980 The book discusses topics on polyproteins polyfunctional proteins precursor proteins as well as the differences in synthesis and processing of ACTH endorphin peptides in primary cultures of anterior and intermediate lobes of the pituitary The text also presents evidence for a self cleaving precursor of virus coded protease RNA replicase and VPg and the role of Pr180gag pol in the characterization and genetic analysis of retrovirus maturation Precursor Processing in the Biosynthesis of Proteins ,1980 *Protein Biosynthesis in Eukaryotes*

R. Perez-Bercoff, 2013-04-09 **Molecular Mechanisms of Protein Biosynthesis** Herbert Weissbach, 2012-12-02

Molecular Mechanisms of Protein Biosynthesis is a collection of papers dealing with cell free systems at the molecular level including transfer RNA the initiation elongation and termination processes ribosome structure and function mRNA translation and DNA directed in vitro protein synthesis A couple of papers review tRNA aminoacyl tRNA synthetases and aspects of ribosome structure One paper discusses affinity labeling in the study of binding and catalytic sites of large complex and heterogeneous systems such as the ribosome The investigator should be aware of the chemically reactive or photoactivatable analogue reacting specifically with one or more ribosomal components This reaction should be determined if it is dependent on the correct binding of the affinity label at the functional site Another paper describes the series of reactions in protein synthesis as the process by which the ribosome moves relative to the messenger RNA Other papers discuss messenger RNA and its translation DNA dependent cell free protein synthesis as well as the genetics of the translational apparatus The collection will benefit microbiologists biotechnologists and academicians connected with the biological sciences *Neurotransmitters and Cortical Function* Massimo Avoli, Tomas A. Reader, Robert W. Dykes, Pierre Gloor, 2012-12-06 Herbert Henri Jasper is a scientist whose research activities have initiated and encompassed many of the major themes of neuroscience He has pioneered in single unit recording chronic neuronal studies neurochemistry electroencephalography and many other disciplines His students now hold important positions in universities and hospitals around the world From July 21 to 23 1986 a symposium entitled Neurotransmitters and Cortical Function From Molecules to Mind was held in Montreal to honor Professor Jasper and to continue his pioneering efforts The following chapters originated in that meeting They summarize the current status of our knowledge in some of the fields influenced by Professor Jasper They share a focus on neurotransmitters in cortical function where we presume higher mental events originate Professor Jasper has made contributions to the understanding of three different classes of neurotransmitters GABA acetylcholine and catecholamines It is an interest in trying to link neurochemical events to some aspects of complex brain function and behavior that has characterized his work and it is this philosophy that led to the present symposium to honor

him We dedicate this volume to Professor Jasper and the integrative approach that he has fostered The Editors Montreal Contents 1 H H Jasper Neuroscientist of Our Century **Energetics of Secretion Responses** J.W.N. McKerns, Vladimir Pantić, 2013-11-11 Near the end of September 1980 the contributors to Hormonally Active Brain Peptides Structure and Function met to discuss their chapters for the monograph This meeting was the eighth sponsored by the International Foundation for Biochemical Endocrinology and was held at the Hotel Plakir in Dubrovnik Yugoslavia Several months were allowed after the meeting for the contributors to revise their manuscripts and for editing Professor Dr Vladimir Pantić and the Serbian Academy of Sciences and Arts were in charge of the local arrangements and social activities The Foundation is grateful for the splendid job that was done and for the outstanding scientific cultural and social activities I thank the Serbian Academy of Sciences and Arts and the Yugoslav Council of Academies for sponsoring my stay in Yugoslavia I greatly enjoyed giving lectures visiting laboratories and discussing research projects in a number of centers in Yugoslavia A diverse group of topics was presented in Dubrovnik concerning certain brain peptides The topics included Structure Function and Conformation of Neuropeptides Distribution of Peptides in the Brain Regulation of the Release of Peptide Hormones The Active Center of Gonadotropins In Vitro Synthesis of Hypothalamic Hormones Studies on Gonadotropin Releasing Hormone Studies on the Biosynthesis Release and Degradation of LH RH Genesis and Properties of Pituitary ACTH Prolactin and Growth Hormone Producing Cells Precursors to Oligopeptide Hormones and Stress Effects on Peptide Hormone Synthesis *Co- and Posttranslational Proteolysis of Proteins*, 2001-09-28 This volume examines a number of different proteases a type of enzyme that are required in order for the change to a biologically active mature protein to occur The discussion of these various proteases is rarely undertaken in one volume and will serve as a great resource for scientists studying the group of proteases on signal peptide processing as well as those working on propeptide processing These areas of research do not normally overlap and yet they are each of common importance to the same cell processes *Mechanisms of Intracellular Trafficking and Processing of Proproteins* Y. Peng Loh, 1992-10-23 Mechanisms of Intracellular Trafficking and Processing of ProProteins provides an in depth discussion of the cellular organization and current views of the molecular mechanisms underlying the trafficking sorting and processing of various classes of proproteins The book covers the mechanisms of proprotein translocation across the rough endoplasmic reticulum RER membrane and subsequent transport to the Golgi apparatus molecular sorting and retention signals involved in directing proproteins to various cellular compartments and the specific enzymes mediating different posttranslational modification steps It is the only book that covers the principles of intracellular trafficking and processing of proproteins using examples representative of different classes of proproteins in the cell New classes of enzymes especially proteases with unique specificities are examined as well Mechanisms of Intracellular

Trafficking and Processing of ProProteins presents a wealth of information valuable to cell biologists endocrinologists neurobiologists enzymologists and biochemists Students studying molecular endocrinology neurobiology and cell biology will also find the book to be a useful text

Seed Proteins Peter R. Shewry, R. Casey, 2012-12-06 Seeds provide more than half of the world's intake of dietary protein and energy and thus are of immense economic cultural and nutritional importance Proteins can account for up to 40% of the dry weight of various types of seeds thereby making a large contribution to the nutritional quality and processing properties of seeds It is therefore not surprising that seed proteins were among the first plant components to be systematically studied some 250 years ago and have been a major focus of research over the past 100 years The properties and behaviour of seed proteins pervade modern life in numerous ways For example legume and cereal proteins are used in the production of a wide range of meat free foods the process of bread making is dependent on the physical chemical properties of wheat seed proteins and in developed as well as developing countries nutritional deficiencies among vegetarian diets are avoided through balancing legume and cereal seeds as sources of dietary proteins Understanding seed proteins in order to improve their composition and properties and to increase their concentrations will thus continue to be an important research objective for the future The present volume represents the culmination of a long discussed plan of the editors to bring together the best international authorities in order to compile a definitive monograph on biological biochemical molecular and genetic aspects of seed proteins

Biological Chemistry of Organelle Formation T. Bücher, W. Sebald, H. Weiss, 2012-12-06 Eukaryotic cells contain a plurality of organelles distinguished by their specific membranes and contents Their biogenesis occurs by growth and division of preexisting structures rather than de novo Mitochondria and chloroplasts which appear to be descended from prokaryotic ancestors have retained some DNA and the biosynthetic capability for its expression They synthesize however only a few of their proteins themselves Most of their proteins are synthesized on free ribosomes in the cytoplasm and are only assembled in the correct membrane after synthesis is complete The biogenesis of peroxisomes and glyoxysomes also appears to occur by an incorporation of proteins synthesized first in the cytoplasm Other organelles the Golgi complex lysosomes secretory vesicles and the plasma membrane are formed in a different manner Their proteins are assembled in the membrane of the endoplasmic reticulum during translation by bound ribosomes and they must then be transported to the correct membrane The 1980 Mosbach Colloquium was one of the first attempts to discuss the biogenesis of the various organelles in biochemical terms This was appropriate since the crucial problems now center on the search for signals and receptors that dictate the site of assembly the route taken and the final location of a particular organelle protein The assembly of prokaryotic membranes and the membrane of an animal virus were also discussed since these simpler systems might shed light on the biogenesis of organelles in eukaryotes

Cumulated Index Medicus, 1977 **Research Awards Index**, 1979 New Products and New Areas of Bioprocess Engineering, 2003-06-30 Today ergot alkaloids have found widespread clinical use and more than 50 formulations contain

natural or semisynthetic ergot alkaloids They are used in the treatment of uterine atonia postpartum bleeding migraine orthostatic circulatory disturbances senile cerebral insufficiency hypertension hyp prolactinemia acromegaly and Parkinsonism Recently new therapeutic applications have emerged e g against schizophrenia and for therapeutic usage based on newly discovered antibacterial and cytostatic effects immunomodulatory and hypolipemic activity The broad physiological effects of ergot alkaloids are based mostly on their interactions with neurotransmitter receptors on the cells The presence of hidden structures resembling some important neurohumoral mediators e g noradrenaline serotonin dopamine in the molecules of ergot alkaloids could explain their interactions with these receptors 1 Ergot alkaloids are produced by the filamentous fungi of the genus *Claviceps* e g *Claviceps purpurea* Ergot Mutterkorn On the industrial scale these alkaloids were produced mostly by parasitic cultivation field production of the ergot till the end of the 1970s Today this uneconomic method has been replaced by submerged fermentation Even after a century of research on ergot alkaloids the search still continues for new more potent and more selective ergot alkaloid derivatives

Bell, 2008-04-08 The beta cells of the pancreatic islets of Langerhans are the only cells in the body that produce and secrete insulin This metabolic hormone plays a central role in the maintenance of glucose homeostasis This book provides a comprehensive review of the beta cell in health and disease The book's primary aim is to encourage investigators to become actively involved in diabetes research and the search for new approaches to prevent and treat diabetes

Pseudomonas Aeruginosa, Biology, Genetics, and Host-pathogen Interactions Dara W. Frank, 2012-02-02 The opportunistic pathogen *Pseudomonas aeruginosa* offers a rich variety of biologically relevant topics to explore and serves as a model system to understand the interactions of Gram negative bacteria with human hosts The organism adapts readily to most environments It has a large and variable genome with a great deal of metabolic potential *P. aeruginosa* encodes a variety of regulatory systems to fine tune gene expression and integrate environmental signals This organism can infect both plants and animals and produces a plethora of enzymes and factors that can overcome host defenses Moreover it has the ability to change between the states of a sedentary colonizer to an invasive and highly motile organism Clinically the bacterium is resistant to many antibiotics making it difficult to treat and impossible to eradicate from the lungs of patients with cystic fibrosis Intrinsic antibiotic resistance combined with an armamentarium of tissue degradative enzymes makes it imperative to possess a comprehensive understanding of the biology genetics and pathogenesis of this organism so that novel

therapeutics based on virulence product neutralization can be designed and implemented This Research Topics issue will be devoted to updating the current understanding of *P. aeruginosa* systems as they relate to its different lifestyles in different environments The underlying theme is to provide broad overviews and to integrate protein structure function and gene regulation as it relates to the biology of this bacterium [Biomedical Index to PHS-supported Research](#) ,1991
