**The Mammoth Book of Predators** Alex MacCormick, 2011-09-01 Don t go into the woods today If you re on a cruise tramping through a forest or holidaying in an exotic location you are constantly being watched somewhere close by a creature is lurking stalking and eyeing your every move The variety and range of these potential predators is truly astonishing from Asiatic wolves to rogue elephants fire ants to sharks snakes crocodiles and grizzlies In this definitive anthology survivors recall their terrifying ordeals while hunters and other witnesses describe the final bloody moments of victims and their killers Including The British climber alone in the mountain wilderness pursued for days by a vengeful bear The African traveller s unhappy encounter with a crocodile A member of the Royal Family s gory meeting with a shark in the Caribbean A tiger breaking out of the jungle to grab a woman from her village

*Cattle, Their Predators and Geomatics Research* Michael O'Neal Campbell, 2025-08-06 Cattle are currently the most important domesticated mammals with populations numbering in the hundreds of millions and occupying large tracts of land while the conservation of large mammalian carnivores is becoming a dominant discourse in modern geopolitics also claiming large portions of the Earth s land surface Computer based surveying and communication systems including geomatics Big Data and Big Tech are becoming an essential part of human communication and environmental assessments and are critical to large scale assessments of land conflicts A current critical potent but neglected issue concerns the measurement of the interfaces of large carnivore and cattle ecologies in a cross continental format This book offers a novel approach to the interfaces of the sciences of conservation biology animal ecology agricultural development and geomatics which are increasingly interconnected in modern global development scenarios For animal ecology and conservation biology it is about the management systems that have developed from ecological and human parameters For agricultural development topics concern ancestral development physiological characteristics ecological requirements and predation opportunities and conflicts of cattle breeds For geomatics the topics concern the image based and survey based technologies that enable more critical environmental assessments The book takes a novel approach by examining the ancestry of cattle including the aurochs and current wild buffalos gaur banteng yaks bison the process of domestication into taurine and indicine cattle the semi domestication of yaks and water buffalo the ecologies of ancestral and modern large carnivores including bears big cats

and canids and how the requirements of these large charismatic mammals conflict with the requirements of cattle and agricultural development in Asia Europe Africa North America and South America This integrative approach contributes to the interests of academic researchers students practitioners and policy makers and general readers

**Wild Capital** Barbara K. Jones, 2019-11-11 In *Wild Capital* Barbara Jones demonstrates that looking at nature through the lens of the marketplace is a surprisingly effective approach to protecting the environment Showing that policy makers and developers rarely associate wild places with monetary values Jones argues that nature can and should be viewed as a capital asset like any other in order for environmental preservation to be a competitive alternative to development Jones describes how the ecosystem services model a tool that connects human well being with the services nature provides can play a critical role in assigning species and their habitats measurable values She uses five highly recognizable animal species moose manatees sharks wolves and bald eagles as examples to show how highly valued charismatic fauna can serve as symbolic representations of entire ecosystems at risk Through an emphasis on branding incentives and ecotourism Jones advocates for channeling the social and economic power of these and other faces of nature to inspire greater environmental awareness and stewardship Contending that many people don't realize how fiscally pragmatic environmental initiatives can be Jones is optimistic that by recognizing the costs of habitat destruction and diminished biodiversity we will make better choices regarding conservation and development In doing so we can more readily move toward coexistence with nature and a sustainable future

Analysis of vertebrate predator-prey community Vadim Sidorovich, 2011-09-01 This monograph is about predation in vertebrate animal community The studies were done in the seminatural terrains with transitional mixed forest within the European forest zone in Belarus The result part was organised as a top down flow First the community characteristics related to predators were estimated I presented data on predator species richness population density and biomass with special attention paid to the changes in predator species diversity occurred during the last two centuries and particularly in connection with the American mink and raccoon dog naturalization Then the main features of predator food niches were given and the structure of various predator guilds and size structure in predators were analysed The next part of the monograph was devoted to examining of community important factors acting in semi natural terrains Such factors affected either the whole community or its marked fragment The last quite a large part of the monograph consisted of many chapters which present more or less essential results on different predator species and stresses hot questions of their population ecology

**Chernobyl Wild Life** Yves Earhart, 2025-01-05 Chernobyl Wild Life presents a groundbreaking

exploration of nature's resilience following one of history's most significant nuclear disasters. The book reveals fascinating insights into how wildlife has not only survived but in many cases thrived in the Chernobyl Exclusion Zone since the 1986 accident. Through decades of research data, the authors demonstrate how various species have developed remarkable adaptations to cope with elevated radiation levels, challenging conventional wisdom about the long-term effects of nuclear contamination on ecosystems. The research combines traditional wildlife biology methods with modern radiation monitoring techniques, tracking everything from wolves and bears to birds and insects. Following the evacuation of 116,000 people, the 2,600 square kilometer area became an unprecedented living laboratory, allowing scientists to study wildlife responses to both radiation exposure and the absence of human activity. The findings reveal surprising patterns of biological resilience, with many species showing genetic and behavioral adaptations to their radioactive environment. The book progresses logically from the immediate aftermath of the disaster through long-term ecological changes, concluding with broader implications for conservation biology and radiation science. By connecting multiple scientific disciplines and presenting complex data through accessible explanations and visual representations, it offers valuable insights for both researchers and informed general readers. This comprehensive approach makes it an essential resource for understanding ecosystem recovery and wildlife adaptation in extreme environmental conditions.

Tara K. Harper,2007-12-18 Tara K Harper's Wolfwalker novels are a particular favorite of mine. Anne McCaffrey's Dion Healer, also called Wolfwalker, dared to try to unlock the secrets of aliens. Her courage was rewarded with their fury, and she was nearly destroyed. Now desperate to put distance between herself and the fate that awaits her, Dion rages against the wolves as much as she rages against the world. But she cannot elude those who seek her: the Gray Ones, who grow restless with her absence; the brother searching the wilderness for his Wolfwalker twin; and the people of her homeland, who are relying on her to secure their future with her new knowledge. And there is one other: a distant warrior unable to resist the mysterious force that summons him to find a woman whose face he has never seen, whose name he has never heard. As the forces of destiny converge on Dion, she must fight to keep her secrets safe—secrets that could change Wolfwalker warrior and their very world forever.

**Biodiversity and the Management of the Madrean Archipelago** Leonard F. DeBano,1999-10

This conference brought together scientists and managers from government, universities, and private organizations to examine the biological diversity and management challenges of the unique sky island ecosystems of the mountains of the southwestern U.S. and northwestern Mexico. Session topics included floristic resources, plant ecology, vertebrates, invertebrates, hydrology, and riparian systems, aquatic resources, fire conservation, and management of human uses through time and visions for the future.

Illustrated **Biodiversity and Management of the Madrean Archipelago** ,1995      *Animals and Hunters in the Late*

*Middle Ages* Hannele Klemettilä,2015-03-02 This book explores views of the natural world in the late Middle Ages, especially as expressed in *Livre de chasse* (Book of the Hunt), the most influential hunting book of the era. It shows that killing and

maiming suffering and the death of animals were not insignificant topics to late medieval men but constituted a complex set of issues and could provoke very contradictory thoughts and feelings that varied according social and cultural milieus and particular cases and circumstances

**The Predator Paradox** John A. Shivik,2014-05-13 An expert in wildlife management tells the stories of those who are finding new ways for humans and mammalian predators to coexist Stories of backyard bears and cat eating coyotes are becoming increasingly common even for people living in non rural areas Farmers anxious to protect their sheep from wolves aren t the only ones concerned suburbanites and city dwellers are also having more unwanted run ins with mammalian predators And that might not be a bad thing After all our government has been at war with wildlife since 1914 and the death toll has been tremendous federal agents kill a combined ninety thousand wolves bears coyotes and cougars every year often with dubious biological effectiveness Only recently have these species begun to recover Given improved scientific understanding and methods can we continue to slow the slaughter and allow populations of mammalian predators to resume their positions as keystone species As carnivore populations increase however their proximity to people pets and livestock leads to more conflict and we are once again left to negotiate the uneasy terrain between elimination and conservation In *The Predator Paradox* veteran wildlife management expert John Shivik argues that we can end the war while still preserving and protecting these key species as fundamental components of healthy ecosystems By reducing almost sole reliance on broad scale death from above tactics and by incorporating nonlethal approaches to managing wildlife from electrified flagging to motion sensor lights we can dismantle the paradox have both people and predators on the landscape and ensure the long term survival of both As the boundary between human and animal habitat blurs preventing human wildlife conflict depends as much on changing animal behavior as on changing our own perceptions attitudes and actions To that end Shivik focuses on the facts mollifies fears and presents a variety of tools and tactics for consideration Blending the science of the wild with entertaining and dramatic storytelling Shivik s clear eyed pragmatism allows him to appeal to both sides of the debate while arguing for the possibility of coexistence between ranchers and environmentalists wildlife managers and animal welfare activists and humans and animals

**Perspectives on Social Memory in Japan** Yun Hui Tsu,Jan van Bremen,Eyal Ben-Ari,2021-12-28 This collection of essays represents the first interdisciplinary study in English to consider social memory in Japan across a wide range of issues and phenomena Unlike previous studies which have focused on isolated issues especially Second World War events this volume examines in depth a variety of memorialization subjects including music and poetry artefacts and tools oral testimonies and written documents stones and performances rivers and earthquakes ritual and ceremonies as well as art and artists In addition to

valuable insights into the social and cultural life of the Japanese its contextualized analysis and rich narrative provide a basis for the comparative study of collective memory making The chapters are thematically grouped as Remembering the Dead Art of Memory and Nature Remembered

**Ecology** Jaboury Ghazoul, 2020-08-27 Understanding how our living environment works is essentially a study of ecological systems Ecology is the science of how organisms interact with each other and with their environment and how such interactions create self organising communities and ecosystems This science touches us all The food we eat the water we drink the natural resources we use our physical and mental health and much of our cultural heritage are to a large degree products of ecological interactions of organisms and their environment This Very Short Introduction celebrates the centrality of ecology in our lives Jaboury Ghazoul explores how ecology has evolved rapidly from natural history to become a predictive science that explains how the natural world works and which guides environmental policy and management decisions Drawing on a range of examples he shows how ecological science can be applied to management and conservation including the extent to which theory has shaped practice Ecological science has also shaped social and cultural perspectives on the environment a process that influences politics of the environment Ghazoul concludes by considering the future of ecology particularly in the light of current and future environmental challenges ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable

**Waiting for Wolves in Japan** John Knight, 2003 A Japanese conservationist group has launched a campaign for the reintroduction of the wolf in Japan arguing that the wolf would be the savior of upland areas of Japan which are suffering from wildlife pestilence This book examines the reintroduction proposal by drawing on ethnographic fieldwork in one of the candidate areas and shows that conflicts with wildlife are inextricably bound up with social conflict among people and that wildlife pestilence must therefore be understood in terms of its symbolic as well as material dimensions
