Tangredi,2000 This survey is a product of the Quadrennial Defense Review QDR 2001 Working Group a project of the Institute for National Strategic Studies at the National Defense University Sponsored by the Chairman of the Joint Chiefs of Staff the working group is an independent honest broker effort intended to build intellectual capital for the upcoming QDR More specifically it aims to frame issues develop options and provide insights for the Chairman the services and the next administration in three areas defense strategy criteria for sizing conventional forces and force structure for 2005 2010 One of the group s initial tasks was to assess the future security environment to the year 2025 This was pursued by surveying the available literature to identify areas of consensus and debate The goal was to conduct an assessment that would be far more comprehensive than any single research project or group effort could possibly produce This survey documents major areas of agreement and disagreement across a range of studies completed since the last QDR in 1997 Because it distills a variety of sources and organizes and compares divergent views this volume makes a unique contribution to the literature It also provides a particularly strong set of insights and assumptions on which both strategists and force planners can draw in the next Quadrennial Defense Review This survey does not claim to predict or illustrate all possible wars that America might face between now and the year 2025 Rather it attempts through analysis of representative and reputable sources to incorporate the most likely characteristics of the future security environment into a single scenario while heightening our awareness of dissenting viewpoints and plausible wild cards Paths to Glory Mark L. Armour, Daniel R. Levitt, 2004 Essays on diamond

success from the nineteenth century to the present **Growth** Vaclav Smil, 2020-12-08 A systematic investigation of growth in nature and society from tiny organisms to the trajectories of empires and civilizations Growth has been both an unspoken and an explicit aim of our individual and collective striving It governs the lives of microorganisms and galaxies it shapes the capabilities of our extraordinarily large brains and the fortunes of our economies Growth is manifested in annual increments of continental crust a rising gross domestic product a child s growth chart the spread of cancerous cells In this magisterial book Vaclav Smil offers systematic investigation of growth in nature and society from tiny organisms to the trajectories of empires and civilizations Smil takes readers from bacterial invasions through animal metabolisms to megacities and the global economy He begins with organisms whose mature sizes range from microscopic to enormous looking at disease causing microbes the cultivation of staple crops and human growth from infancy to adulthood He examines the growth of energy conversions and man made objects that enable economic activities developments that have been essential to

civilization Finally he looks at growth in complex systems beginning with the growth of human populations and proceeding to the growth of cities He considers the challenges of tracing the growth of empires and civilizations explaining that we can chart the growth of organisms across individual and evolutionary time but that the progress of societies and economies not so linear encompasses both decline and renewal The trajectory of modern civilization driven by competing imperatives of material growth and biospheric limits Smil tells us remains uncertain

The Global Imperative Robert P Clark,2018-02-12 Robert Clark delves into 100 millennia of human history to create a unified and consistent explanation for humankind s inner need to spread itself across the globe He examines key events from different eras such as the voyages of the Chinese treasure fleet the shaping of the Aztec s trade system in MesoAmerica the role of steam powered transport in the supply of an English city the rise of the gas powered engine and the digitization of information in the computer age melding them together to form a framework for understanding the process of globalization Drawing on a variety of academic disciplines including the physical sciences biology anthropology geography economics political science sociology and demography Clark reveals the spread of humans and their cultures to be part of an ongoing struggle to supply the energy needs of an increasingly large and complex society Entropy and thermodynamics terms often ignored or misunderstood by social science students clearly frame a fascinating vision of humans inherent tendency toward a globalized world Although human expansion has drawn increasing attention in the last several decades as this tumultuous century has progressed Clark shows that the process of globalization is not a recent concept From the very roots of the species humankind has been driven by a range of internal and external factors to expand in order to survive the increasing complexity of human civilization

[Economic Forecasting for Management](#) Hans G. Graf,2002-08-30 Before future oriented information can be used as a basis for decision making in economics or business administration it must be understood on a methodological level This book provides decision makers with a thorough understanding of the possibilities offered by various forecasting methods as well as their limitations If managers rely on a forecast with a long term perspective to guide them in making short term decisions planning deficiencies will likely result Likewise if managers use short term forecasts to inform their long term strategic vision failure could easily ensue Graf provides the tools necessary to sidestep the common pitfall of using the wrong forecasting technique for the wrong purpose This is not a detailed examination of the mathematical and statistical tools of empirical economic research Instead forecasting methods are explained so that they can be understood by the managers who employ them in their decision making Graf demonstrates that understanding and in special cases cooperation between forecast developers and users is crucial to creating an effective forecast that results in informed management decisions He discusses traditional long term

macroeconomic and global economic forecasting the scenario technique as a central instrument of long term forecasting and short term economic and market forecasting

A Legal Framework for Bioethics Cosimo Marco Mazzoni, 2023-09-20 A comparative analysis of the legislation in the field of bioethics in several Western countries especially in European Union member states shows that there is a profound difference both in legislative policies and in the ethical principles enshrined by the laws Over the past few years bioethics as a discipline has attempted to elaborate individual and collective behavioural codes in several fields but it has come up against enormous difficulties it has not even been possible to reach a consensus between different countries on the general principles An example of this is the recent Convention on Bioethics endorsed by the Council of Europe The aim of the essays contained in this book is to highlight the differences between existing regulations in several countries and to stress how necessary it is to elaborate a legal framework that could be shared by the widest range of national legislations For there is no denying that technological advances in the fields of both biology and medicine as well as progress in surgical treatments mean that jurists the world over are faced with a common scientific reality The task of the jurist must therefore be to engage in a comparative analysis so as to overcome the differences in national legislations
