

In the past, there were many more kinds of rhinos than there are today. Instead of just five species, there were over a hundred species. As you can see, some of the ancient rhinos looked like today's rhinos, and some of them did not.

The first rhinos lived about 60 million years ago. They were very small and looked like the ancestors of horses. They did not have horns, and many rhinos that came after them did not have horns either. Some ancient rhinos had much longer legs than today's rhinos, and some had much shorter legs. Can you find some other differences between ancient and modern rhinos?

 during the relatively recent geological past Each entry provides a concise discussion of the history of the animal how and
 where it lived and how it became extinct as well as the scientific discovery and analysis of the creature In addition this work
 examines what led to extinction from the role of cyclical swings in the Earth's climate to the spread of humans and their
 activities Many scientists believe that we are in the middle of a mass extinction right now caused by the human undermining
 of the earth's complex systems that support life Understanding what caused the extinction of animals in the past may help us
 understand and prevent the extinction of species in the future *Extinct Animals* examines the biology and history of some of
 the most interesting creatures that have ever lived including The American Terror Bird which probably became extinct over 1
 million years ago who were massive predators some of which were almost 10 feet tall the Rocky Mountain Locust last seen in
