## Prehistory Of China:

The Prehistory of China Judith M. Treistman, American Museum of Natural History, 1972 The author describes the multiplicity of China's prehistoric cultures and the technological innovations of two million years ago the period which marked the beginning of civilization and the development of feudalism and which formed the basis of medieval China

The Prehistory of China Judith M. Treistman, 1972     *A Study of Prehistoric Settlement Patterns in China* Anping Pei, 2020-04-07 This book is the first ever monograph on clustering patterns in prehistoric settlements It not only theoretically explains the difference between natural settlement communities and organizational forms for the first time but also demonstrates the importance of understanding this difference in practical research Based on extensive archaeological data from China and focusing on the evolution of prehistoric settlements and changing social relations the book completely breaks with the globally popular research mode which is based on the assumption that settlement archaeology has nothing to do with prehistoric social organization In terms of research methods the book also abandons the globally popular method of measuring the grade and importance of settlements according to their size and the value of the unearthed objects Instead it focuses on understanding settlements attributes from the combined perspective of the group and individuals On the one hand the book proves that the clustering patterns in prehistoric settlement sites reflect the organizational forms of the time on the other it demonstrates that historical research focusing on the organizational forms of prehistoric societies is closer to the historical reality and of more scientific value The intended readership includes graduates and researchers in the field of archaeology or those who are interested in cultural relics and prehistoric settlements

The Burial Record of Prehistoric Liangshan in Southwest China Anke Hein, 2016-12-13 This book proposes a new model and scheme of analysis for complex burial material and applies it to the prehistoric archaeological record of the Liangshan region in Southwest China that other archaeologists have commonly given a wide berth regarding it as too patchy too inhomogeneous and overall too unwieldy to work with The model treats burials as composite objects considering the various elements separately in their respective life histories The application of this approach to the rich and diverse archaeological record of the Liangshan region serves as a test of this new form of analysis This volume thus pursues two main aims to advance the understanding of the archaeology of the immediate study area which has been little examined and to present and test a new scheme of analysis that can be applied to other bodies of material
